Agenda

Carrier Integration

Day 3

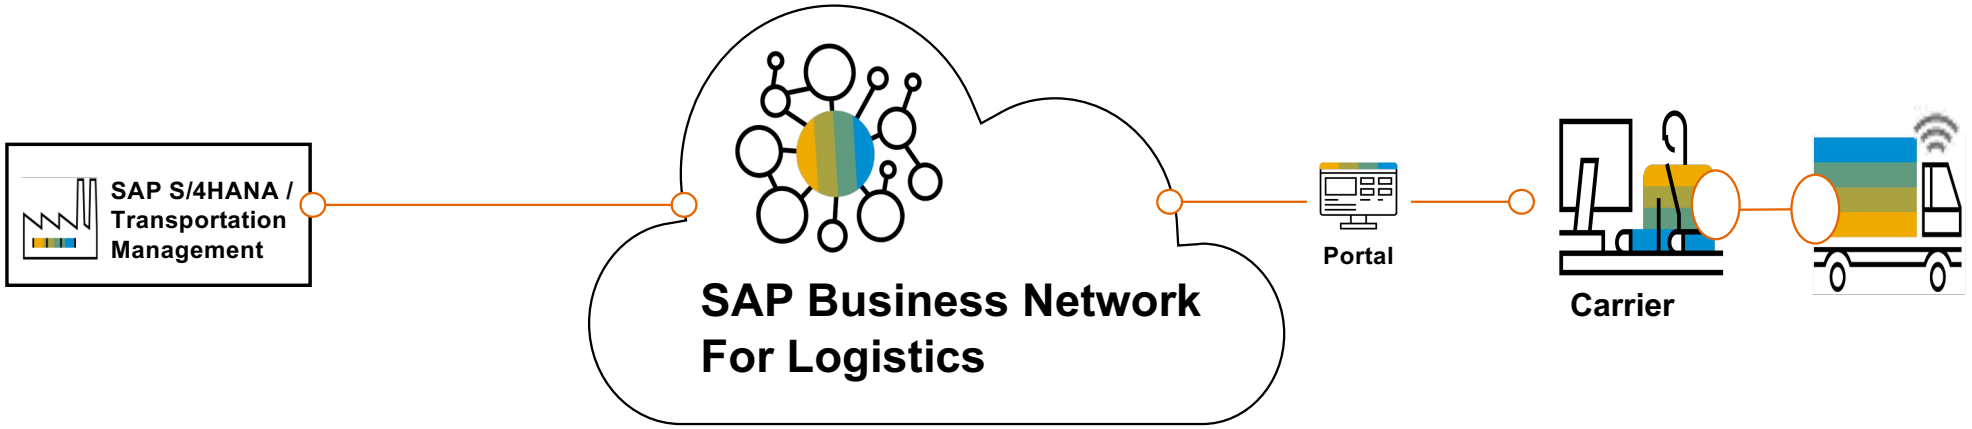

Agenda

Carrier Integration

- **Integration Overview**
- API Integration Details
- EDI ANSI X12 Integration
- EDI EDIFACT Integration
- Odds & Ends

Day 3

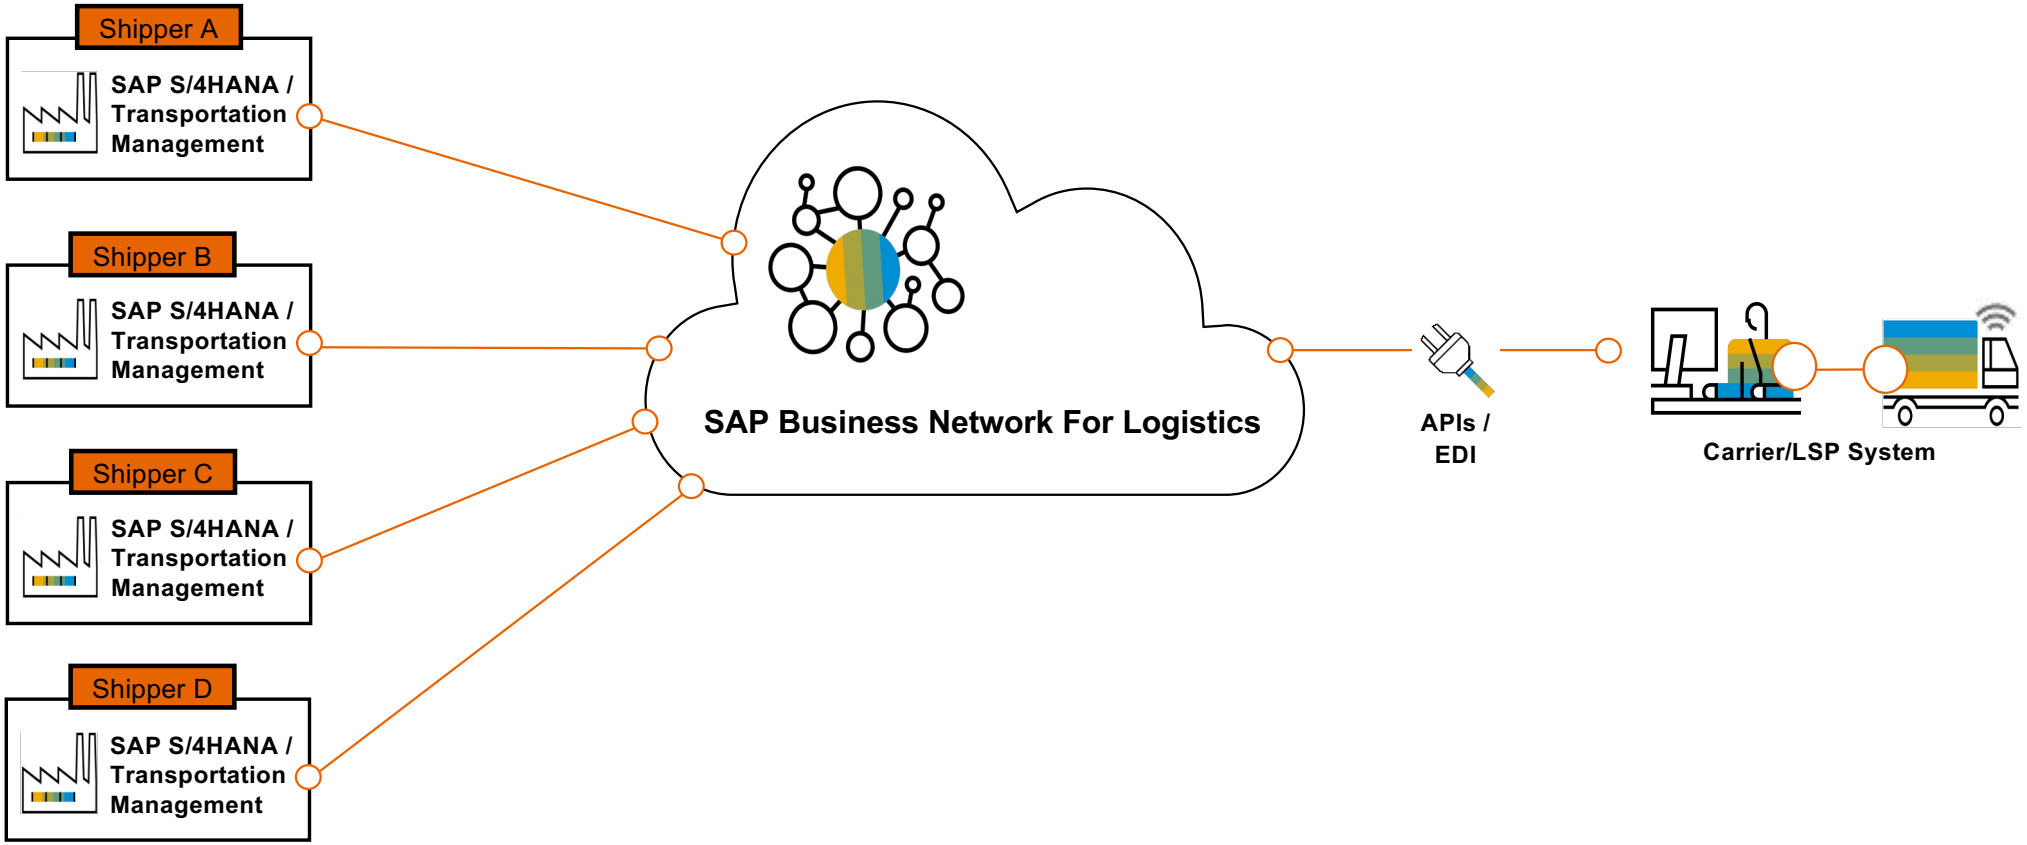

Carrier Onboarding

Before a carrier can integrate, they first must be onboarded to the network

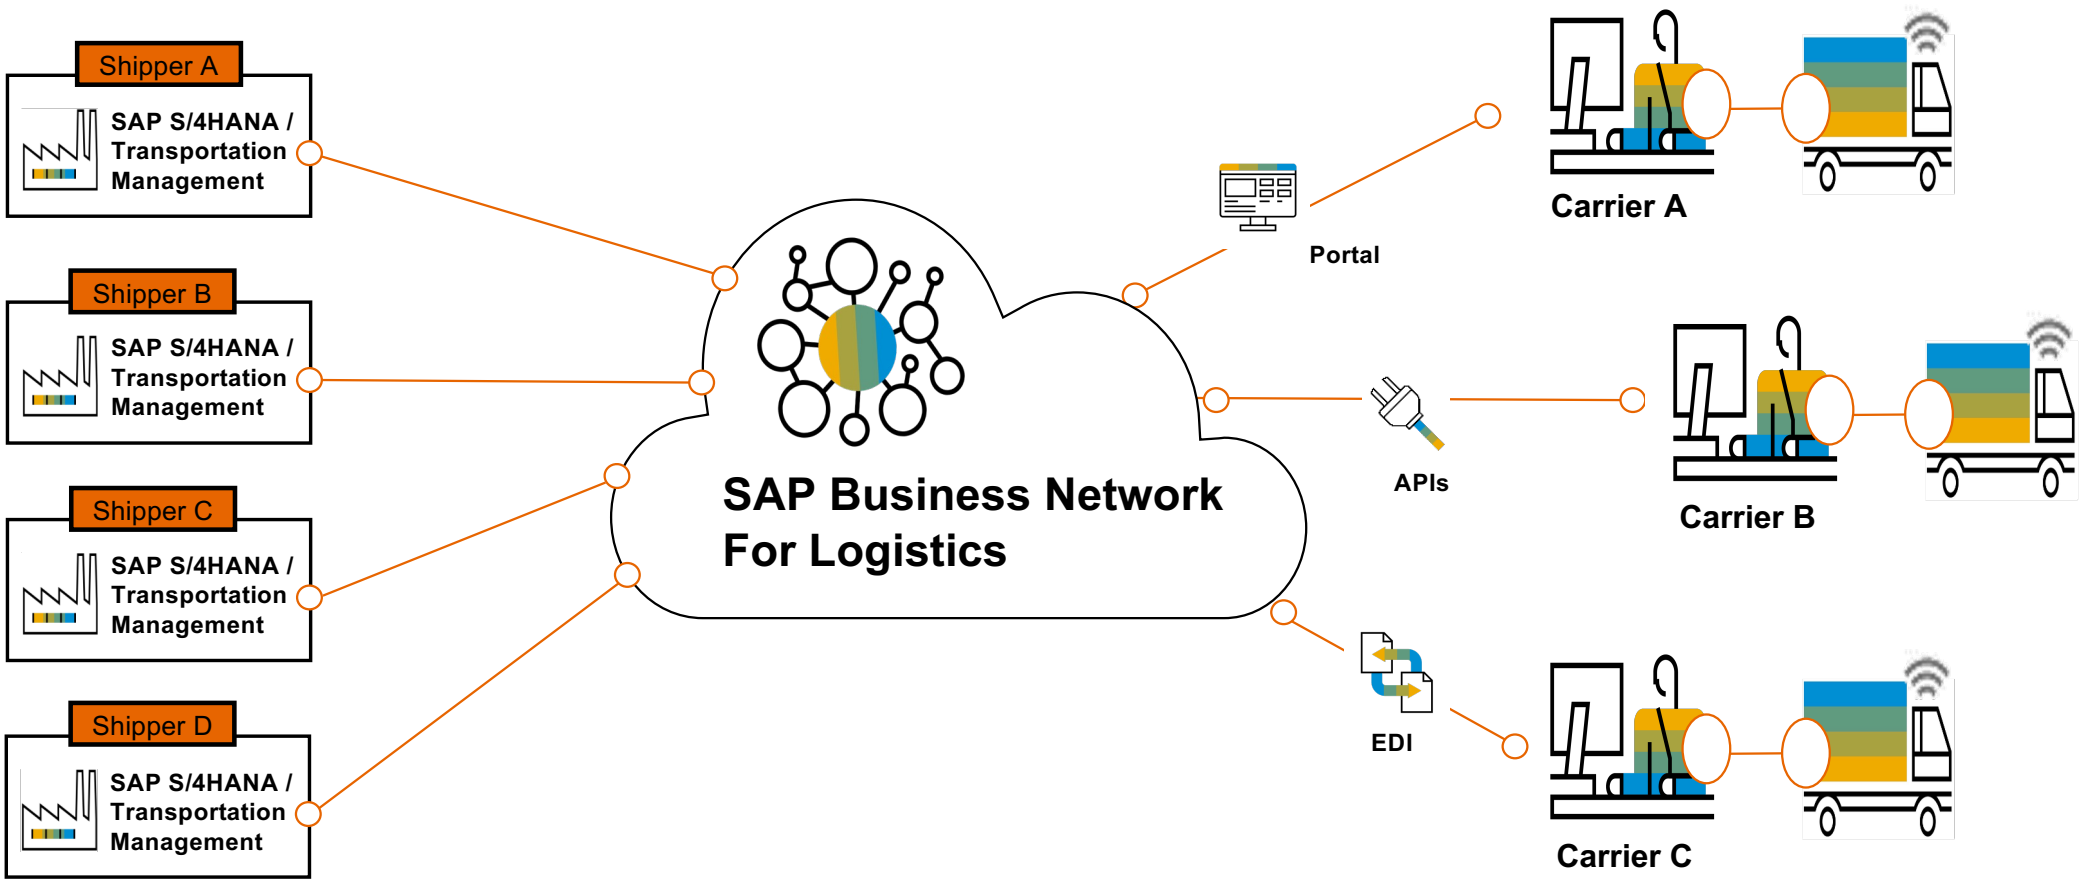

- What is onboarding? Onboarding is the creation of a tenant that the carrier has exclusive access to
- Onboarded carriers connect to and collaborate with shippers the Web Portal
- Optionally carriers can choose to develop integrations to automate the collaboration with shippers
- To develop an integration carriers should order a Test Tenant in our test landscape
- Shippers also existing in the test landscape and can collaborate there with carriers during development & testing

A Single Integration to Connect to Many Shippers

INTERNAL – SAP and Partners Only

Carrier Collaboration Options

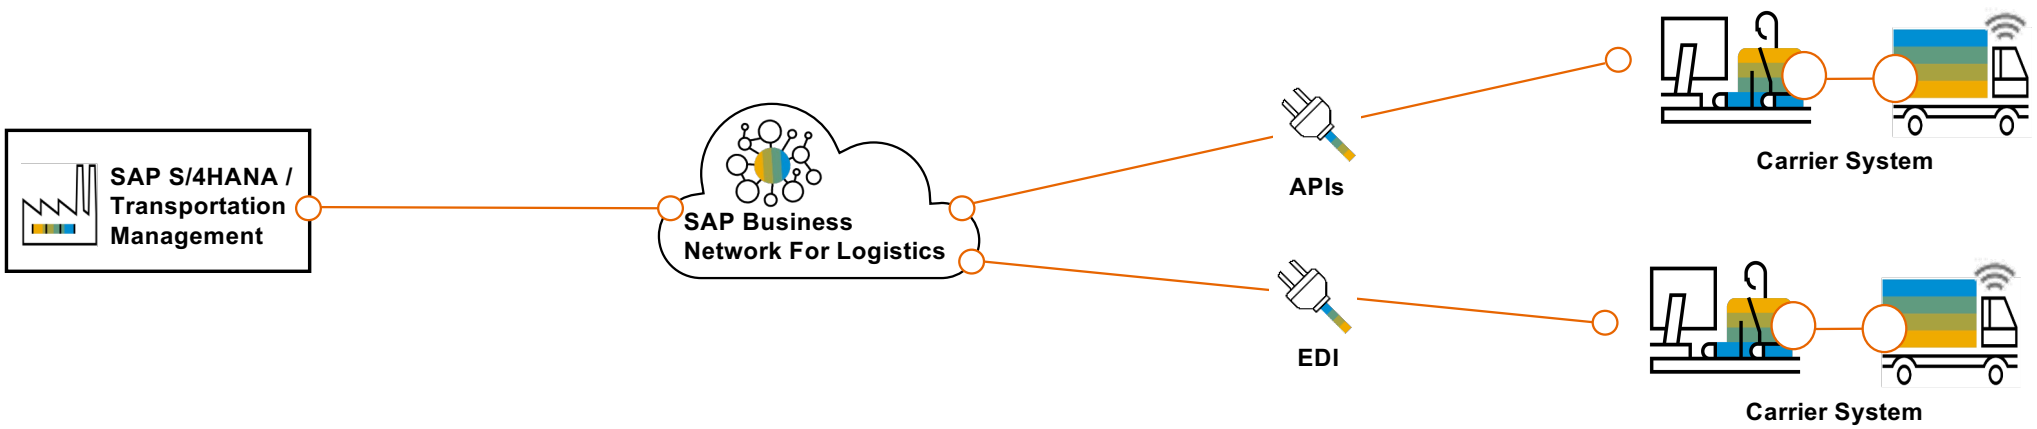

* Some functionality only available in the portal – Dock Appointment Scheduling, Freight Settlement Disputes

** EDI has no industry support for road quotes

*** Functionality not covered by integration must be done in the portal

INTERNAL – SAP and Partners Only

API vs EDI

API

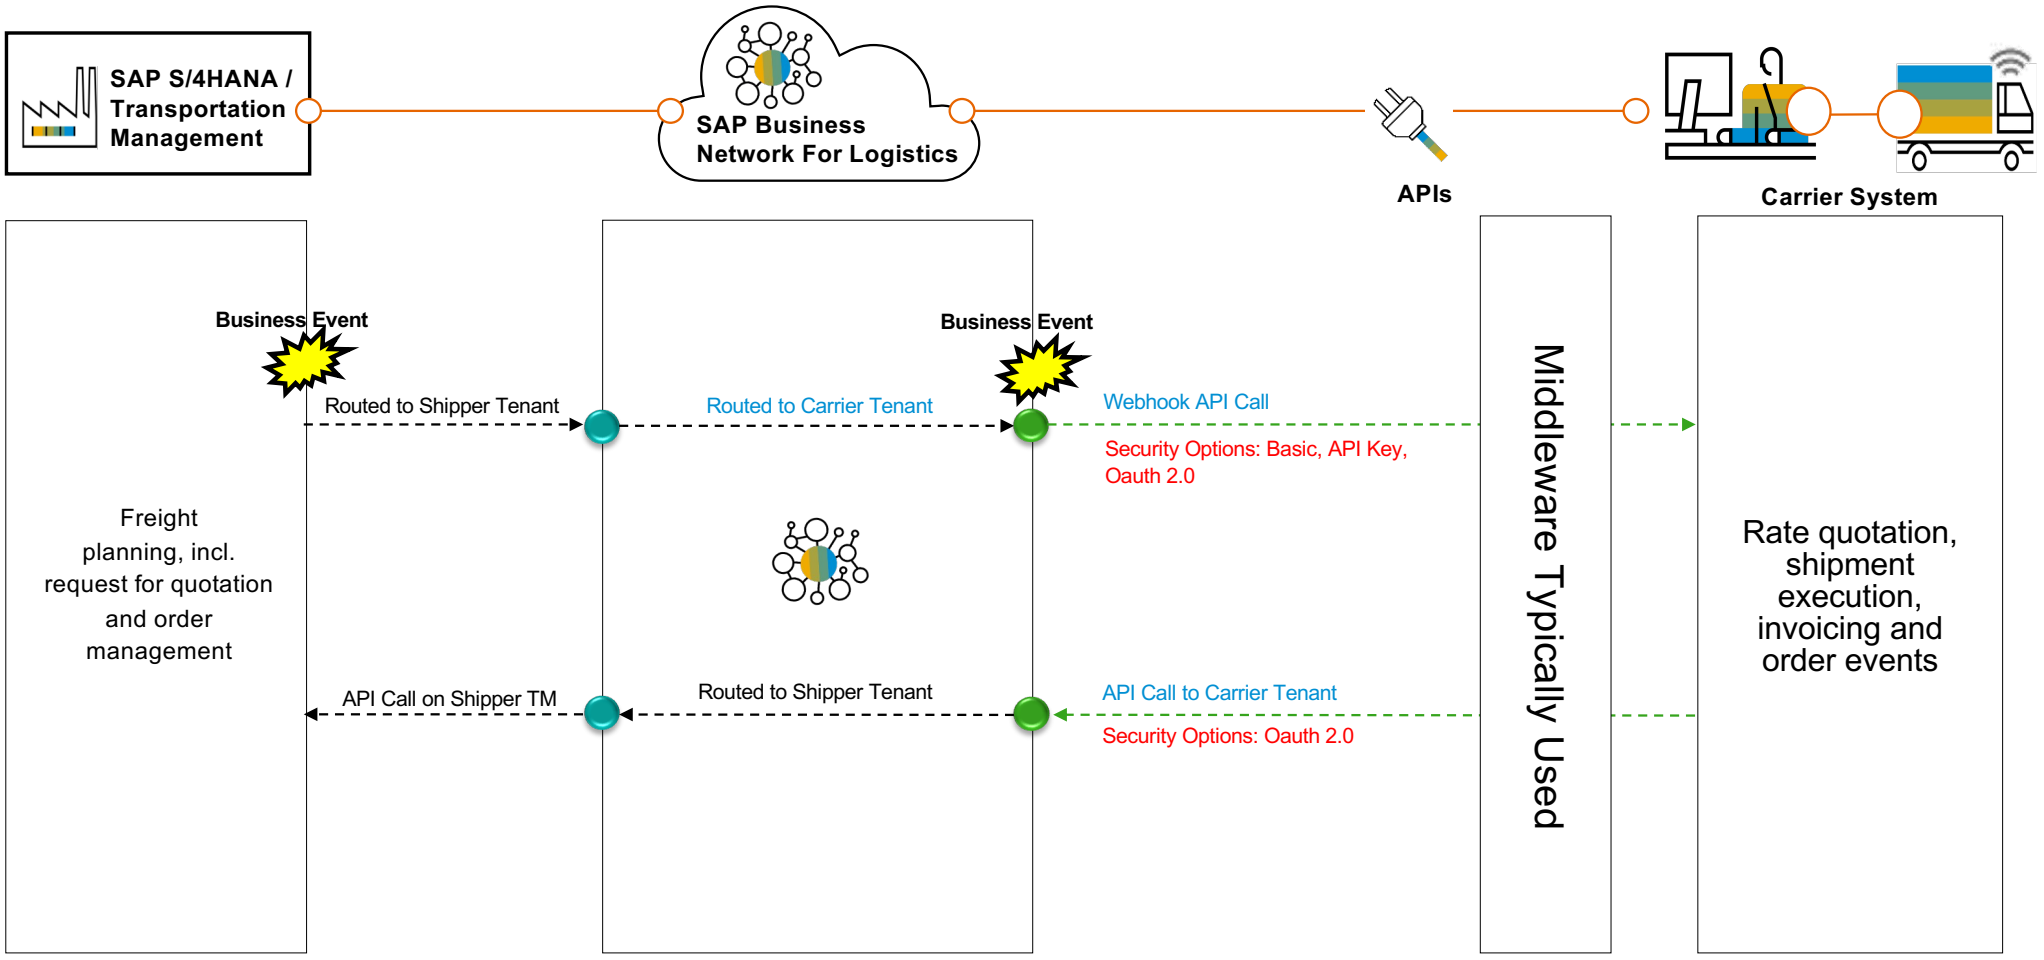

- More functionality
- Requires Development or Middleware
- Faster communication
- API Docs

EDI

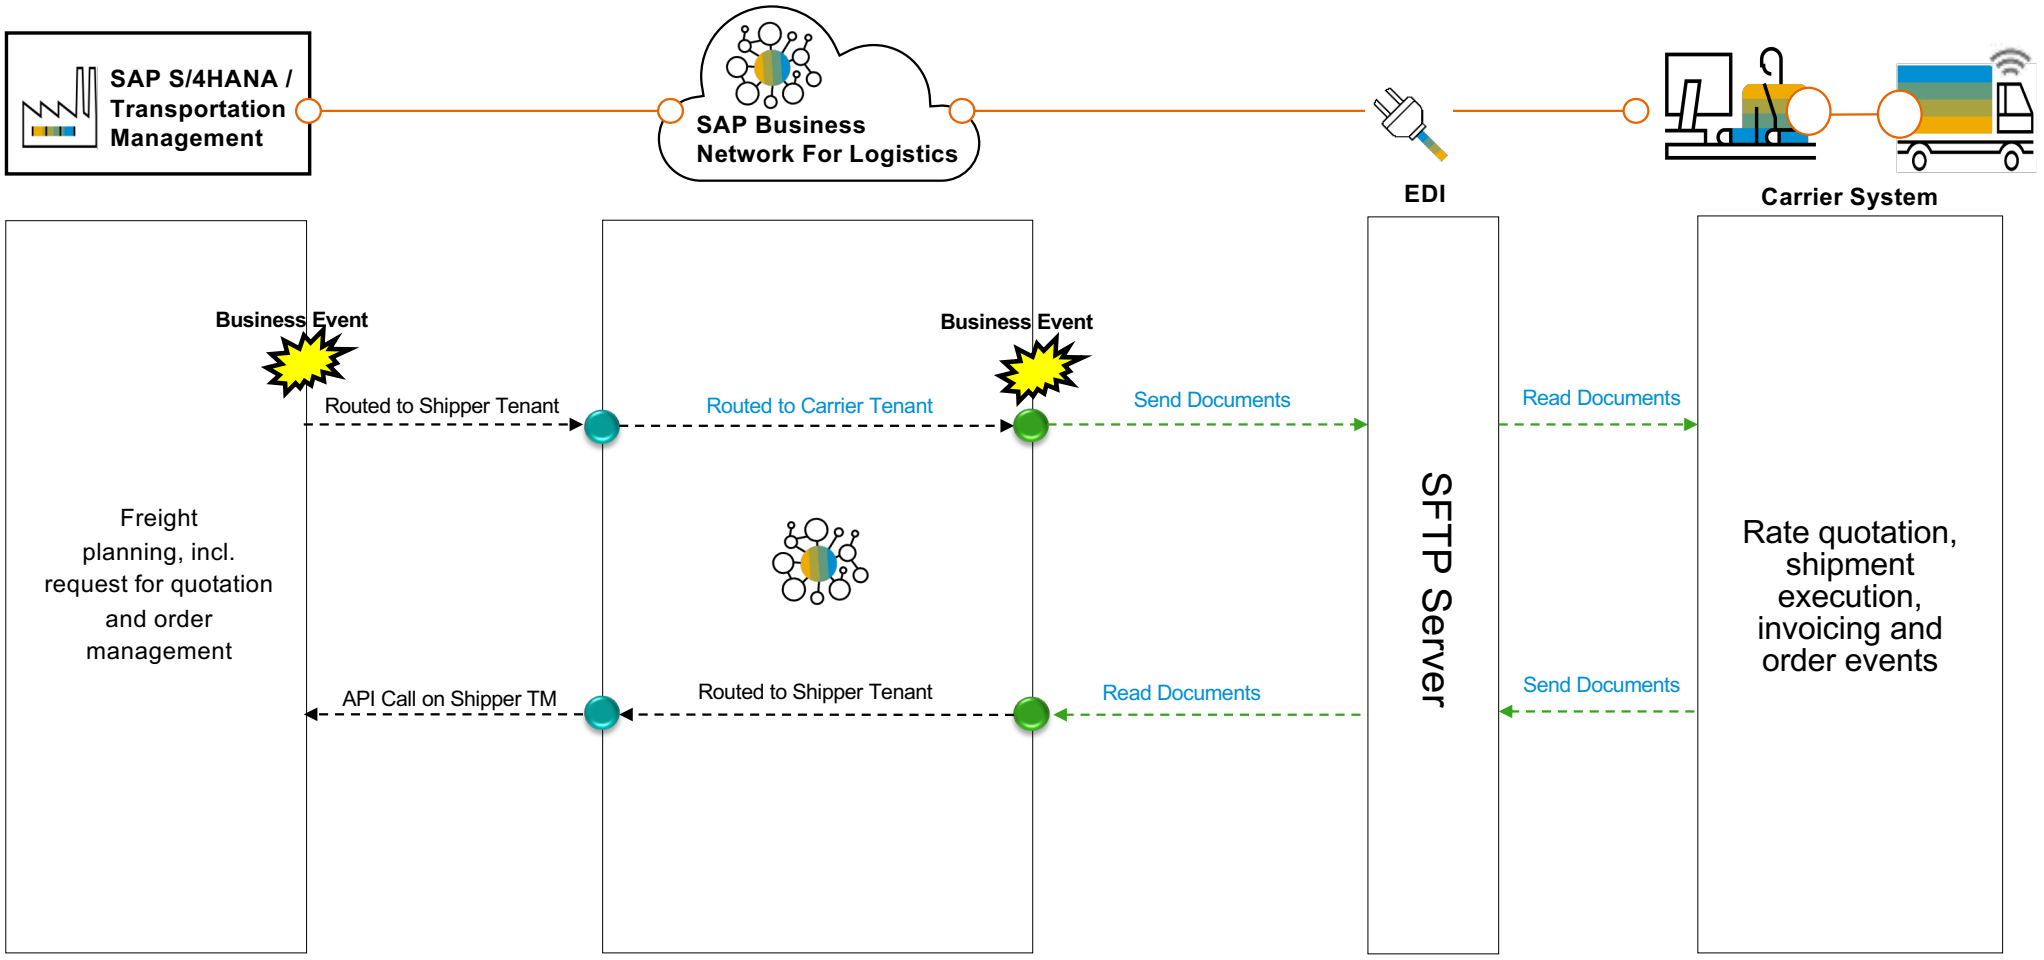

- Industry Standard
- Typically less effort to build integration
- Requires carriers have an SFTP server
- FC EDI Docs & GTT EDI Docs

INTERNAL – SAP and Partners Only

API Integration

EDI Integration

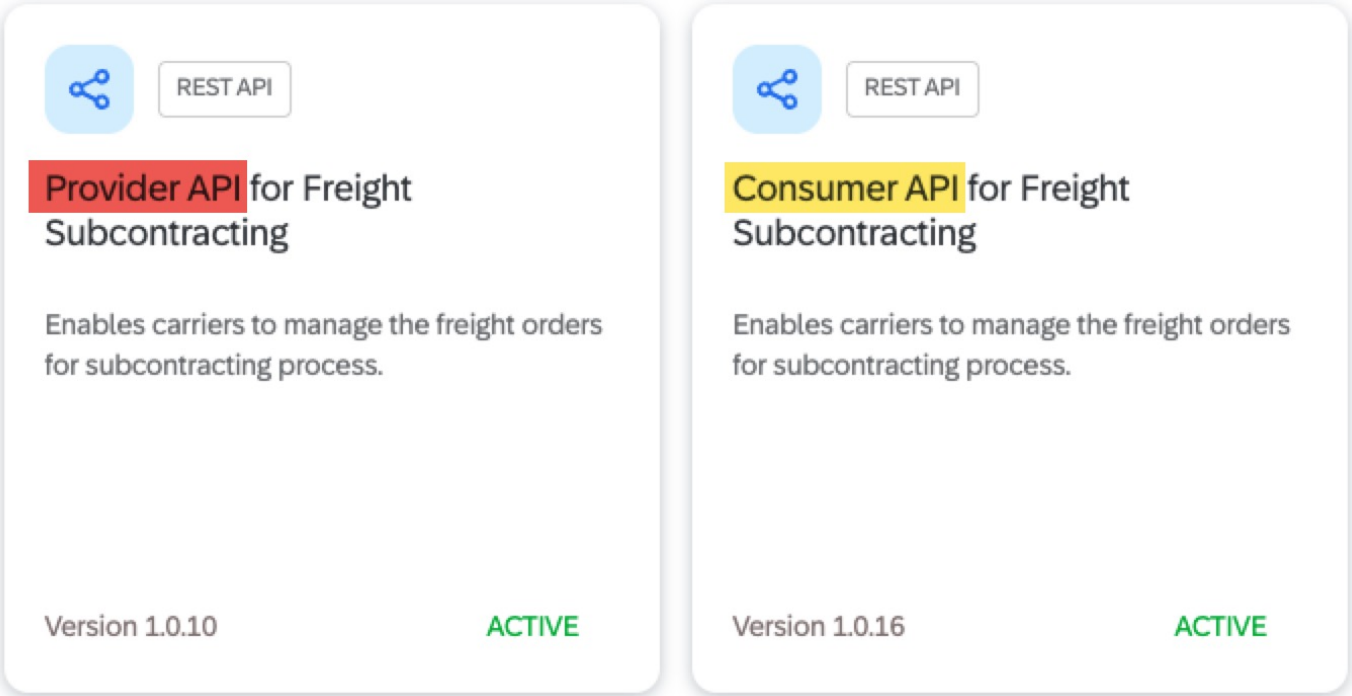

API Hub & Provider vs Consumer APIs

Freight Collaboration Carrier APIs Docs

Global Track & Trace Carrier API Docs

Provider API – APIs that the carrier calls to “provide” data to the network

Consumer APIs – APIs the the carrier needs to develop in order to “consume” data from the network

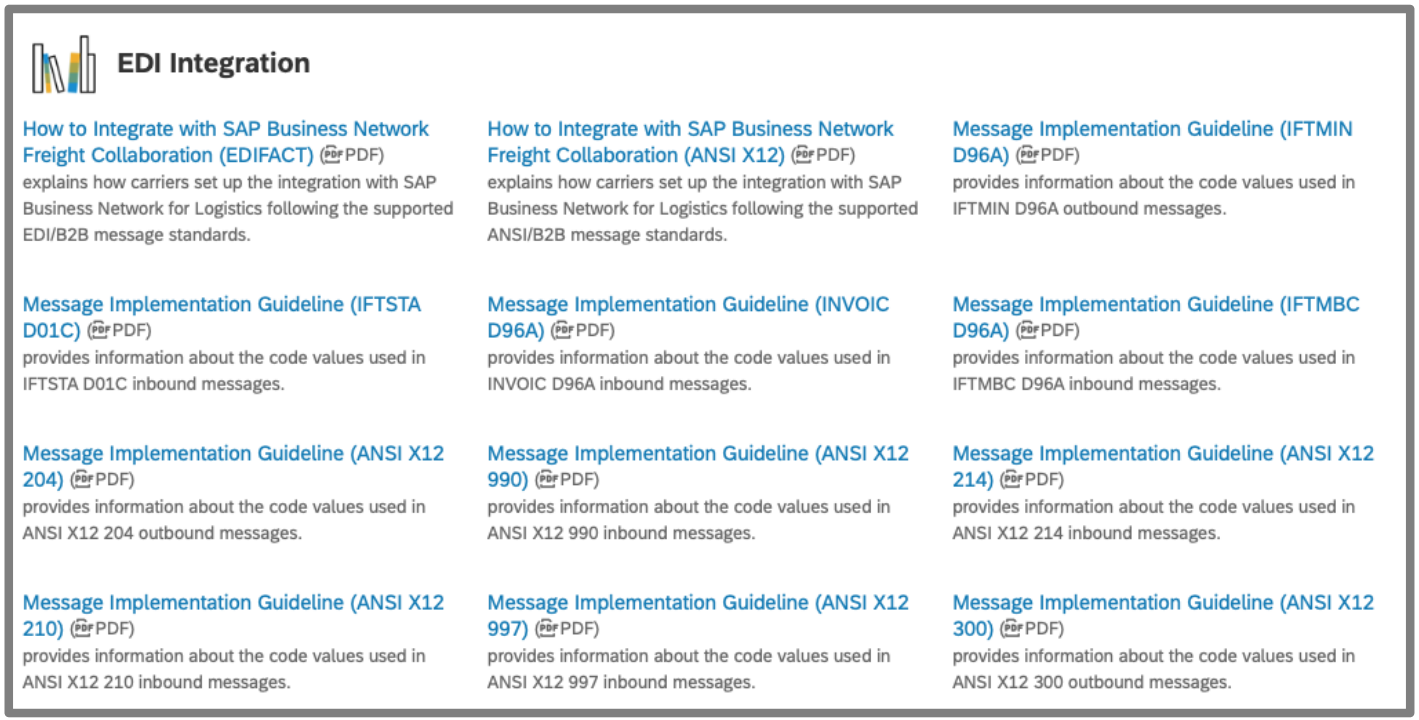

INTERNAL – SAP and Partners Only

EDI Specs

[Freight Collaboration EDI Specs]

[Global Track & Trace EDI Specs]

All Supported EDI documents have associated spec documents

EDI Integration

How to Integrate with SAP Business Network Freight Collaboration (EDIFACT) (PDF)
explains how carriers set up the integration with SAP Business Network for Logistics following the supported EDI/B2B message standards.

How to Integrate with SAP Business Network Freight Collaboration (ANSI X12) (PDF)
explains how carriers set up the integration with SAP Business Network for Logistics following the supported ANSI/B2B message standards.

Message Implementation Guideline (IFTMIN D96A) (PDF)
provides information about the code values used in IFTMIN D96A outbound messages.

Message Implementation Guideline (IFTSTA D01C) (PDF)
provides information about the code values used in IFTSTA D01C inbound messages.

Message Implementation Guideline (INVOIC D96A) (PDF)
provides information about the code values used in INVOIC D96A inbound messages.

Message Implementation Guideline (IFTMBC D96A) (PDF)
provides information about the code values used in IFTMBC D96A inbound messages.

Message Implementation Guideline (ANSI X12 204) (PDF)
provides information about the code values used in ANSI X12 204 outbound messages.

Message Implementation Guideline (ANSI X12 990) (PDF)
provides information about the code values used in ANSI X12 990 inbound messages.

Message Implementation Guideline (ANSI X12 214) (PDF)
provides information about the code values used in ANSI X12 214 inbound messages.

Message Implementation Guideline (ANSI X12 210) (PDF)
provides information about the code values used in ANSI X12 210 inbound messages.

Message Implementation Guideline (ANSI X12 997) (PDF)
provides information about the code values used in ANSI X12 997 inbound messages.

Message Implementation Guideline (ANSI X12 300) (PDF)
provides information about the code values used in ANSI X12 300 outbound messages.
