You can filter the worklists by various criteria. Note: If you enter the filter criteria by typing them, the fields are case-sensitive and you must include an asterisk (*) at the start or end of any IDs or names not written in full.

In the Stages tab, I am unable to edit the UN/LOCODE field all the time. Why?

Only when the ordering party has not specified the location details for any of the stages in the freight booking you can add a UN/LOCODE. Note that once the location details are available, you cannot edit this field.

I am unable to edit the Vessel, Voyage, and IMO details in the Information tab. Why?

You can only view all the details in the Information tab. You can edit these details for the main carriage stage in the Stages tab.

Confirm Freight Bookings (Air) App

Are you a carrier with a question about your Confirm Freight Bookings app for air freight? If so, take a look at these FAQs.

How do I know when there is a new freight booking?

On the app tile, the number of new freight bookings is updated and, within the app, the new freight bookings are displayed in the New worklist.

Why was my note not saved and sent to the shipper?

Notes are only saved and sent to the shipper when you confirm or reject the freight booking.

How often are the worklists updated?

The worklists are updated when you open the app, filter the worklists, or use the manual refresh function.

How can I find a freight booking in the worklists?

You can filter the worklists by various criteria. Note: If you enter the filter criteria by typing them, the fields are case-sensitive and you must include an asterisk (*) at the start or end of any IDs or names not written in full.

In the Stages tab, I am unable to edit the IATA code field all the time. Why?

Only when the ordering party has not specified the location details for any of the stages in the freight booking you can add a IATA. Note that once the location details are available, you cannot edit this field.

I am unable to edit the Flight Code details in the Information tab. Why?

You can only view all the details in the Information tab. You can edit this information for the main carriage stage in the Stages tab.

Freight Orders for Reporting App

Are you a carrier with a question about your Freight Orders for Reporting app? If so, take a look at these FAQs.

Note that this app has been deprecated and will be sunset shortly. This app has been replaced with the new app Manage Freight Execution.

When is a freight order visible in Freight Orders for Reporting app?

The freight order is visible in the app after the freight order has been confirmed in the **Freight Orders for Confirmation** app.

Can I report events in any sequence?

There is no strict sequence in which you must report the events. The app enables you to skip events in the **Events to Report** worklist and to report events from the **Reporting** section of a freight order in any sequence.

When should I report a delay and when should I report the final time of an event?

The decision on what to report and when to report it depends on your agreement with the ordering party. If you just want to inform the ordering party when events were completed, only report the final time for each event (i.e. when the event was completed). If you also want to inform the ordering party about delays as they occur, use the **Report Delay** dialog to send updates to the ordering party.

Why are events sometimes highlighted red?

When you report an event that is delayed, the event is highlighted red.

Can I adjust the final time after reporting it?

Yes, you can. If, for example, you make a mistake when reporting a final time, you can simply report the final time again.

Can I enter a final time for an event that's marked as Unable to Report?

Yes, you can.

Why are all actions unavailable for a freight order with the status Reporting in Progress (freight order reconfirmation required)?

The status indicates that the ordering party has updated the freight order. Therefore, before you can continue reporting the events, the freight order must be confirmed again in the **Freight Orders for Confirmation** app.

What's the difference between skipping an event and marking an event as Unable to Report?

If you don't have the information to report the event currently displayed in the **Events to Report** worklist, you can skip the event and report it later. If you realize that you'll never be able to report the skipped event, you can mark the event as **Unable to Report**. By doing so, the event is no longer considered as skipped and missing a final time.

Related Information

Freight Orders for Reporting

Manage Freight Execution App (Carrier)

Are you a carrier with a question about your **Manage Freight Execution** app? If so, take a look at these FAQs.

When is a freight document visible in Manage Freight Execution app?

The freight order is visible in the app after the freight order has been confirmed in the **Freight Orders for Confirmation** app.

When the freight document is set to **Ready for Execution** in the external system and the corresponding tracking initiation request is triggered, the freight document is visible in the app.

Can I report events in any sequence?

There is no sequence in which you must report the events. The app enables you to skip events and to report events for a freight document in any sequence.

When should I report a delay and when should I report the final time of an event?

The decision on what to report and when to report it depends on your agreement with the ordering party. If you just want to inform the ordering party when events were completed, only report the final time for each event, that is, when the event was completed. You can also inform the ordering party about delays as they occur by reporting the Delay as an unplanned event.

Can I adjust the final time after reporting it?

Yes, you can. If, for example, you make a mistake when reporting a final time, you can simply report the final time again.

What's the difference between skipping an event and marking an event as Unable to Report?

If you do not have the information to report the event, you can skip the event and report it later. If you realize that you'll never be able to report the skipped event, you can mark the event as **Unable to Report**. By doing so, the event is no longer considered as skipped and missing a final time.

Can I enter a final time for an event that's marked as Unable to Report?

Yes, you can.

If an actual event is reported by the shipper, carrier and the visibility provider, where can I see all the events?

If an actual event is reported by the shipper, carrier and the visibility provider, then you can view all these events in the **Events History** pane. You can view the details of which business partner reported the event in the **Business Partner** field.

Can I update my freight document once the reporting has started?

Yes, you can update the freight document once the reporting has started. However, you cannot modify the planned events which have already been reported. Note that the document has to be updated with the option of same or higher precedence. For more information, seeAdministration Guide for Shippers. In the guide, see **Manage Freight Execution** in the **Configuring Additional Services** section.

Invoice Freight Documents App

Are you a carrier with a question about your **Invoice Freight Documents** app? If so, take a look at these FAQs.

How do I know when there is a new freight document?

You can view the number of new freight documents on the **Invoice Freight Documents** app tile on the Fiori launchpad.

You can also view all new freight documents in the **To be Invoiced** worklist in the app.

In the Invoicing in Process and All worklists, what does the Invoices field indicate?

For the freight documents for which invoices have already been created or submitted, this field lists the number of invoices that are already created or submitted.

What happens when I select multiple freight documents and choose Create Invoice?

The system creates individual invoices for each of the selected freight documents.

How often are the worklists updated?

The worklists are updated when you open the app, filter the worklists, or use the manual refresh function.

How can I find a freight document in the worklist?

You can use the search options in the header area of the worklist page to find a freight document.

Note: If you enter the filter criteria by typing them, the fields are case-sensitive and you must include an asterisk (*) at the start or end of any IDs or names not written in full.

Why am I still able to create an invoice for an document which is in the Invoicing in Process worklist?

When you create an invoice, due to split and consolidation criteria, the system creates multiple invoices. When one of the invoices is deleted, the system allows you to create a new invoice for the charges included in the deleted invoice.

Related Information

Invoice Freight Documents

Manage Invoices App

Are you a carrier with a question about your Manage Invoices app? If so, take a look at these FAQs.

How often are the worklists updated?

The worklists are updated when you open the app, filter the worklists, or use the manual refresh function.

How can I find an invoice in the worklist?

You can use the search option in the header area of the worklist page to find an invoice.

Note that the search option is case-sensitive. You must use a wildcard character (*) if you do not enter the complete invoice ID.

In the invoice detail view, in the items section, what do the freight documents indicate?

The items table displays the included freight document items. If the invoice has been created with multiple freight documents, the system displays the freight order details in this section.

ℹ Note

If the charging is based on stages or a tour, the individual lines in the item table indicate various stages of the freight order.

If the charging is based on freight items, the individual lines in the item table indicate various items of the freight order.

Alternatively, if the charging is for the entire document, there is one entry each for each freight order in the item table.

Where do the charge details, rates, and amounts in the invoice come from?

The freight order from the ordering party contains details of charges based on the agreement between you and the ordering party. During invoice creation, the system transfers these charges from the freight order to the invoice.

Why do I see multiple invoices for a single freight order?

If the freight order contains different payment terms or currencies for various stages or items, the system cannot combine them into a single invoice. This results in the invoice being split, and hence, the system creates multiple invoices.

Why do I see multiple invoices when I create a collective invoice?

The system creates multiple invoices for the following reasons:

- The ordering parties or invoicing parties are different in the selected freight orders.
- The document currencies are different in the selected freight orders.
- The freight orders are charged differently. For example, it is not possible to combine two freight orders if one is charged by items and the other is charged by stages.
- The payment terms are different in the selected freight orders.

Why do I see logistical data and calculation rules in a dialog box for some of the rate amounts?

If the rate amount is a flat rate for a charge line, you can directly edit the rate amount.

If the rate amount is based on a rate table, the system displays the logistical data and any calculation rules in a dialog box. You can view and modify the logistical data based on which the rate amount is calculated in this dialog box.

Why does the final amount not change when I change the rate amount?

When you change the rate amount, the system does not recalculate the final amount. Hence, you must change the final amount accordingly.

What is the difference between the exclude and delete options?

You can exclude an existing charge from the charges table by choosing the exclude charge icon. You can also choose to include the charge again.

You can only delete a new charge that you have added from the charges table.

When should I use the download or upload invoice option?

When you have multiple invoices to submit, you can use the invoice template option, which reduces manual effort. If you have invoices from your system as a PDF or Microsoft Excel file, you can download prefilled invoice templates from SAP Business Network Freight Collaboration in Microsoft Excel file in the xlsx format. You can use a custom program to automatically port the contents of your PDF or Microsoft Excel file into the downloaded invoice template. You can also manually enter the data into the downloaded invoice template.

When you upload the Microsoft Excel file of xlsx format to the **Manage Invoices** app, the system updates the invoice with the values from the uploaded file.

When I enter a new charge, I get an error message indicating that the charge is a duplicate. Why?

This error message appears when you add a new charge and enter a charge type that exists already for the same logistical reference. The system does so because you can modify the rate amount and final amount of the existing charge line instead of adding a new charge.

Related Information

Manage Invoices

Credit Memos App

Are you a carrier with a question about your **Manage Invoices** app? If so, take a look at these FAQs.

How often are the worklists updated?

The worklists are updated when you open the app, filter the worklists, or use the manual refresh function.

How can I find a credit memo in the worklist?

You can use the search option in the header area of the worklist page to find a credit memo.

Note that the search option is case-sensitive. You must use a wildcard character (*) if you do not enter the complete credit memo ID.

I am unable to perform any actions on the credit memo. Why?

As of now, you can only view credit memos that have been created when you cancel invoices with credit memo. You cannot modify a credit memo document.

Review Freight Documents App

Are you a carrier with a question about your **Review Freight Documents** app? If so, take a look at these FAQs.

How do I know when there is a new freight document?

You can view all new freight documents on the **All** tab worklist in the app.

How often are the worklists updated?

The worklists are updated when you open the app, filter the worklists, or use the manual refresh function.

How can I find a freight document in the worklist?

You can use the search options in the header area of the worklist page to find a freight document.

Note: If you enter the filter criteria by typing them, the fields are case-sensitive and you must include an asterisk (*) at the start or end of any IDs or names not written in full.

How is this app different from the Invoice Freight Documents app?

With the **Invoice Freight Documents** app, you can see the freight documents from those customers who have registered you for the carrier invoicing process. You can submit invoices for those freight documents.

With the **Review Freight Documents** app, you can see the freight documents from those customers who have registered you for the self-billing process. If you agree with the freight document charges, you do not need to perform any action.

Review Freight Documents

Manage Disputes App

Are you a carrier with a question about your **Manage Disputes** app? If so, take a look at these FAQs.

How often are the worklists updated?

The worklists are updated when you open the app, filter the worklists, or use the manual refresh function.

How can I find a dispute in the worklist?

You can use the search option in the header area of the worklist page to find a dispute.

How can I include an unplanned charge that needs to be added to the list of charges?

You can create a dispute from the **Review Freight Documents** app and choose the add charge line option. You can enter a charge type and the amounts for the unplanned charge in this charge line.

How does the ordering party know when I add an unplanned charge?

Before you submit the dispute document, you can add a note for the new charge line. You can also attach files in the **Attachments** section

How do I include my disagreements on the line-haul rate amount and final amount specified by the ordering party?

If you have already created a dispute for the freight document and have not submitted the dispute document, you can choose to modify the rate amount and final amount for the specific charge line.

How do I know if the ordering party has responded to my dispute?

You can view the disputes that you submitted to the ordering party on the **Submitted** tab.

When the ordering party completes their review of the dispute, you can view the dispute on the **To be Approved** tab or on the **Resolved** tab.

If the ordering party accepts all the disputes, you can view the dispute on the **Resolved** tab.

If the ordering party rejects or submits a proposal to one of the disputed charge lines, you can view the dispute on the **To be Approved** tab.

What happens when I accept all the proposals from the ordering party?

The system sets the document to **Resolved** status, and the ordering party also sees the document as **Resolved**.

Why am I unable see the changes in the freight document in my dispute document that I created earlier?

When you create a dispute document, the system uses the data from the freight document that is available at the time of creation. If the freight document changes meanwhile, the system does not update the dispute document. If there are disputes on the changes, you must create another dispute on the freight document once the existing dispute has been resolved.

Self-Book Dock Appointments App

Are you a carrier with a question about your **Self-Book Dock Appointments** app? If so, take a look at these FAQs.

Why can't I find a confirmed freight order in the Ready for Booking table?

If the stop of your freight order does not match any active docking locations maintained in the **Manage Entities** app, your freight order will not be eligible for appointment booking.

Why am I not notified when a shipper reschedules or cancels my dock appointment?

To be notified about an appointment change, you must subscribe to the **Reschedule Appointment** or **Cancel Appointment** scenario in the **Define User Settings** app.

Why do my dock appointments get canceled?

Your dock appointments can get canceled manually by the shipper, and the shipper usually provides the cancellation reason. Your dock appointments can also get canceled automatically. This happens right after the corresponding order, for which the appointment was created, is canceled.

Are dock appointments on the Booked Appointments page always editable?

No, a dock appointment becomes read-only when the booking cut-off time is reached.

Why is my freight order not displayed in the Self-Book Dock Appointments app?

Depending on the settings that your shipper has taken, a freight order is displayed upon freight order creation or upon freight order confirmation. If a confirmation is required, you first need to confirm the freight order in the **Freight Orders for Confirmation** app before it is displayed on the **Ready for Booking** tab. In case of doubt, please ask your ordering party (shipper) if they have already sent the freight order from their transportation management (TM) system.

Why is it not possible to add an attachment?

If there are any attachments that you want to add to the appointment, choose the **Add** button under the **Attachments** section.

You can only upload files that meet the following criteria:

- Files of the formats: jpg, gif, png, pdf, doc, docx, xls, xlsx
- Image files less than 6MB file size
- Document files less than 5MB file size
- File name less than 150 characters including file extension

Why is it not possible to cancel an appointment?

The system allows you to cancel only those appointments for which the associated gate logbooks are in status **Ready for Check-In** or **Cancelled**.

Where can I find an already booked appointment?

Appointments that have already been booked are displayed on the **Booked Appointments** tab.

What should I do if I do not yet know the driver or license plate of the truck that will pick up the cargo items?

The driver and license plate details are not required to book an appointment. The shipper or gate operator can enter them at check-in.

What should I do if I want to book a slot at a given time but the calendar is blocked?

Your shipper can block the calendar according to his needs. Please contact your shipper and ask him if he can release a time slot or book an appointment for you.

How can I see the details of an appointment that was booked by my shipper on my behalf?

To view the details of a booked appointment, go to the **Booked Appointment** tab and search for the freight order ID.

Aditionally, if you want to receive email notifications, you can subscribe to the relevant dock appointment scheduling scenarios using the Manage Notification Settings (Carrier) app.

How can I get to know if booking a dock appointment is a requirement?

The standard processes in SAP Business Network Freight Collaboration do not rely on the dock appointment scheduling features. Please contact your shipper or customer directly to determine if they would like you to book an appointment with them or not.

System Connections App

Are you a carrier with a question about your **System Connections** app? If so, take a look at these FAQs.

Where can I find information about APIs for SAP Business Network for Logistics?

Go to SAP API Hub at https://api.sap.com/package/LbnFreightCollaborationTenderingSubcontracting?section=Overview

Where can I find information about OAuth 2.0 authentication for inbound-to-network communication?

For more information about OAuth 2.0 authentication, please report an incident under component SBN-LBN-INT.

Can I add to the list of supported API operations?

The list of operations is fixed and cannot be added to.

Related Information

System Connections (Carrier)

General

Are you a shipper with a general question about using SAP Business Network Freight Collaboration? If so, take a look at these FAQs.

What happens with my data and who can see or access it?

The only data seen by another business partner is the data you share with them during the subcontracting or tendering process.

Note: SAP support will be able to see your data if a support-related task requires them to do so.

Where is my data stored?

SAP Business Network Freight Collaboration runs on SAP Business Technology Platform, which uses either the Amazon Web Services infrastructure hosted in a data center in Frankfurt, Germany, or the Microsoft Azure infrastructure hosted in a data center in the state of Washington, US. The data used in the solution is also stored in the data center.

Which languages are supported?

Freight collaboration apps support the following languages:

- Arabic
- Bulgarian
- Chinese Simplified
- Chinese Traditional
- Croatian
- Czech
- Danish
- Dutch
- Finnish
- French
- German
- Greek
- Hebrew
- Hungarian
- Italian
- Japanese
- Korean
- Malay
- Norwegian
- Polish
- Portuguese for Brazil
