How do I change the app language?

The app language is defined by the language setting in your Web browser. You can also change the language by clicking the user button in the upper-right corner of the Fiori launchpad window and choosing **Settings**. Then choose **Language & Region** and select the language that you want.

How can I contact a business partner?

You can't chat directly to business partners, but you can send and receive notes regarding tendering and freight orders if your system that is connected to the network supports the process. In addition, the contact details of your business partners are available in the **Manage Carriers** app.

How can I as a shipper report an incident?

To report an incident, click the **Raise Incident** icon in the upper-right corner of the Fiori Launchpad window. Then click **SAP One Support** in the pop-up dialog box, and create an incident on the **Contact SAP Support** page.

For more information about reporting an incident, see https://support.sap.com/en/index.html.

Where can I find a glossary for the terms used in the apps and user assistance?

You can find term definitions in the SAP terminology database:

1. Go to http://sapterm.com and click **Look up SAP terminology**.
2. Enter the search criteria:
    a. Enter the term.
    b. Select the source and target language.
    c. Select the **Advanced Search** checkbox and choose the SBN-LBN-FC component.
3. Click **Search**.

Define User Settings App

Are you a shipper with a question about your **Define User Settings** app? If so, take a look at these FAQs.

Which user settings can be personalized?

You can subscribe to various notification services.

How can I get an email alert for a specific functionality?

You can subscribe to notifications for a specific functionality in the **Define User Settings** app. The list of users subscribed to a notification will display in the **Manage Notification Settings** app. The list of options and their description is available at Manage Notification Settings (Shipper).

What are the scenarios for which I can subscribe to a notification service?

The scenarios for which you can subscribe to a notification service are listed under **Scenarios**. To subscribe, select the checkbox under **Subscribed**.

What happens when I subscribe to a notification service?

Once you subscribe to the notification service for a scenario, the system can send email notifications based on the settings you make in the **Manage Notification Settings** app.

What do I need to do before I subscribe to a scenario?

You must specify an email address.

I have specified an email address but I do not want to subscribe to a scenario at present. Is that possible?

Yes, you can maintain an email address without subscribing to a scenario.

Do I need to maintain an email address even if I do not want to subscribe to a scenario?

No, you do not need to maintain an email address unless you want to subscribe to a scenario.

How do I change the app language?

The app language is defined by the language setting in your Web browser. You can also change the language by clicking the user button in the upper-right corner of the Fiori launchpad window and choosing **Settings**. Then choose **Language & Region** and select the language that you want.

Configure Survey Delivery Settings App

Are you a shipper with a question about your **Configure Survey Delivery Settings** app? If so, take a look at these FAQs.

How do I set up a connection with Qualtrics system?

To set up the connection from your SAP Business Network for Logistics system to the Qualtrics system, you must maintain the appropriate settings in the **System Connections** app. For more information, see Maintaining Qualtrics Connection.

Can I create surveys in this app?

No, you cannot create any surveys in this app. You can only configure the survey delivery settings. You must create surveys in the Qualtrics system. For more information on creating surveys in Qualtrics system, see Customer Delivery Experience Management with Qualtrics.

I can only view one scenario from the drop-down menu. Why?

As of now, **Customer Delivery** is the only scenario available.

What is a trigger condition?

The trigger condition specifies on what event the system must trigger the survey email delivery. You can select one or more events from the drop-down menu that contains the pre-defined events.

Can I customize the surveys?

Yes, you can customize your surveys in the Qualtrics system based on the templates provided by SAP Business Network for Logistics. You can also create your own surveys if required. For more information on creating surveys in Qualtrics system, see Customer Delivery Experience Management with Qualtrics.

System Connections App

Are you a shipper with a question about your **System Connections** app? If so, take a look at these FAQs.

Why should I maintain a system connection?

You must maintain a system connection to exchange messages between your system and your network tenant.

How do I get informed when a certificate is about to expire?

To receive a notification about an expiring certificate, you need to register with the **Cloud System Notification Subscriptions** application. For more information, go to https://support.sap.com/en/my-support/systems-installations/cac.html.

How can I renew a certificate when it expires?

To renew a certificate, you must delete the old certificate once the validity expires and add a new certificate.

Is it mandatory to have a certificate in my system that must be signed by one of the certificate authorities (CAs) available in the load balancer?

Yes, it is mandatory to have a certificate signed by one of the CAs available in the load balancer. If you have a certificate that is signed by a different CA, you must create a ticket. The backend team of SAP Business Network for Logistics will upload your certificate to the network.

Can I provide multiple certificates for a connection?

Yes, you can provide multiple certificates for a connection.

Can I have multiple connections for a system?

Yes, you can have multiple connections for a system.

Can I provide a message type of my own?

No, you cannot provide a message type of your own.

Can I maintain multiple system connections with the same combination of system ID and connection ID?

The system uses the combination of a system ID and connection ID as a unique identifier for a connection. Hence you cannot use the same combination of IDs more than once.

Can I edit a system connection once it is created?

Yes. Only connection ID and system ID cannot be changed once created.

Is it mandatory to maintain a destination in the Outbound from Network section?

No, you do not need to maintain a destination for connection unless you need to send a document or a message from your network tenant to your system.

Will the connection status automatically be updated if the status of the external system undergoes a change? That is, if the external system is removed from the landscape?

No, there will not be any automatic updates in this scenario. The backend team of SAP Business Network for Logistics must manually change the connection status.

With which types of external systems can I set up a connection?

You can choose between the following connection types:

- SAP TM – SAP S/4HANA
- Qualtrics

Assign Codes App

Are you a shipper with a question about your **Assign Codes** app? If so, take a look at these FAQs.

Can I upload my code lists from another external system than TM?

You can upload you code lists from whatever source as long as you comply with the standard columns in the spreadsheet template provided for download by SAP Business Network for Logistics.

Where can the carrier view the code list values that I maintain in the Assign Codes app?

The carrier can view the values that you assign to a specific code list on the UI of the app where the codes are displayed.

Would the existing documents become inconsistent if the mapping is modified?

The mapping defines the values of code lists. Hence, a change in the mapping also signifies a change in the values. However, for existing documents, the mapping that the system applies during the document creation applies throughout the life cycle of the document.

Is it mandatory to maintain code list mapping?

No, it is not mandatory to maintain code list mapping. If no code list mapping is defined, LBN will use the values as defined in TM without any conversion.

Configure Partner Connections App

Are you a shipper with a question about your **Configure Partner Connections** app? If so, take a look at these FAQs.

> **Note**
> The term *business partner* refers to a carrier in your case.

What are the prerequisites for configuring this app?

Before you can configure the partner connections, you must invite the business partner to SAP Business Network for Logistics, and you must agree with them if you want to establish a direct B2B connection or if you'll connect via a network partner.

How to do I get the credential information for a connection?

You have to request the credentials from your business partner or network partner.

Will all the services as defined in SAP Business Network for Logistics be supported by the business partner or network partner?

No. A business partner or network partner may support only a subset of services. Before you establish the connection, you must agree with the business partner or network partner which services they support.

What is a network partner?

A network partner can consist of a network of carriers that provides services like tracking, freight tendering, and subcontracting. SAP Business Network for Logistics offers out-of-the box integration to network partners depending on the supported services.

Configure Partner Connections

Invite Business Partners App

Are you a shipper with a question about your **Invite Business Partners** app? If so, take a look at these FAQs.

I want to upload a business partner Excel file. What is the size restriction for the file?

The size of each business partner Excel file cannot be larger than 2 MB, and the maximum number of rows in it is 5,000.

If I have, for instance, five business partners in a business partner Excel file, can I upload only three of them?

No, you cannot select multiple business partners from a business partner Excel file and upload them.

There is missing data in the business partner Excel file. However, the system still uploads the data. Why?

The system uploads the Excel data because there is no Excel validation. However, when you save the uploaded data in your app, this may result in an error.

How can I edit the business partner details?

When you upload a business partner, you can edit the business partner details before saving using the in-line editing capability.

You can also edit the business partner details later by selecting the business partner and choosing **Edit**.

How do I enter missing business partner data before saving it in my network tenant?

You can use one of the following ways to provide missing business partner data before saving:

- Maintain the missing data in the source system (for example, your SAP Transportation Management system) and re-export the business partner data to Excel.
- Manually enter the missing business partner data in the business partner Excel file before uploading the file to your network tenant.
- Manually enter the missing business partner data using the in-line edit functionality in your network tenant before saving the data.

Why do I get an error message when I save business partner data?

The error message appears for one of the following reasons:

- You have not entered the business partner details completely. For example, you may not have entered any data in the **Business Partner ID** field, which is mandatory.

- You have already uploaded this business partner in your app and chosen to submit the business partner to the backend team of SAP Business Network for Logistics to manage the connection request.

If I accidentally delete a business partner, will I be able to re-upload the business partner?

Yes, you can re-upload a business partner if you have not previously chosen **Submit** for the business partner.

When you select a business partner and choose **Submit**, the system instantaneously sends a request to the backend team of SAP Business Network for Logistics to manage the connection request. Hence, you are not able to re-upload such business partners.

What happens if I re-upload an existing business partner?

When you re-upload an existing business partner, the system overwrites the existing business partner details with the new details.

Can I create multiple business partners with the same system ID and business partner ID?

No, you cannot create multiple business partners with the same IDs. The system uses the combination of the system ID and business partner ID as the unique identifier of a business partner.

Why am I not able to edit business partner data once I submit the business partner?

Once you submit the business partner data, the system instantaneously sends a request to the backend team of SAP Business Network for Logistics to manage the connection request. After this process, you cannot make any changes as these changes will not be updated in the administrator app.

Can I re-submit business partner data?

No, you cannot re-submit business partner data.

What happens when a business partner accepts my invitation?

When a business partner accepts your invitation to connect with you, the system updates the **Accepted** tab with the details of this business partner. You are now connected with this business partner and you can participate in business transactions with the business partner.

What happens when a business partner rejects my invitation?

When a business partner rejects your invitation to connect with you, the system updates the **Rejected** tab with the details of this business partner. You are not connected with this business partner and you cannot participate in business transactions with the business partner.

A business partner has rejected my invitation. Can I contact this business partner through my network tenant?

No, you cannot contact a business partner directly through your network tenant.

Why is the Download Business Partners button available only on the Accepted tab?

You use the **Download Business Partners** button to download the list of business partners with their network IDs that the system updates after they accept the connection invitation. You use this list to update the network IDs in your SAP Transportation Management (SAP TM) system.

Can I partially download some of the business partners from the Accepted tab?

Yes, you can select one or more business partners on the **Accepted** tab and download them in Microsoft Excel format.

Assign Charge Codes App

Are you a shipper with a question about your **Assign Charge Codes** app? If so, take a look at these FAQs

Is it mandatory to assign a charge code to a charge type and condition type mapping?

Yes, you must assign the charge types and condition types to the charge codes in SAP Business Network Freight Collaboration. The users can view the charges present in the orders and the invoice documents via unified business network charge codes. This provides a standardized and consistent way of representing charge codes across users.

How can I view or assign a carrier condition type to charge type mapping in my Transportation Management (TM) on SAP S/4 HANA 1809 system?

You can view or assign condition types to charge types in Customizing for **Transportation Management** under **Integration** > **Enterprise Services** > **Carrier Invoice Integration** > **Assign Carrier Condition Types to SAP TM Charge Types**.

Where can the carrier view the charge codes of SAP Business Network Freight Collaboration that I maintain in the Assign Charge Codes app?

The carrier can view the charge codes that you assign for a charge type and condition type in the **Charge Code** field on the **Charges** tab in the freight orders for settlement and invoice documents.

When a carrier submits and sends the invoice to my transportation system, what happens to the charge codes of SAP Business Network Freight Collaboration?

When a carrier submits and sends the invoice to your transportation system, the system performs a read operation in this configuration and replaces the business network charge codes with the corresponding condition types specific to your transportation system.

Would the existing documents become inconsistent if the mapping is modified?

The mapping defines the attributes of charge types. Hence, a change in the mapping also signifies a change in the attributes. However, for existing documents, the mapping that the system applies during the document creation applies throughout the life cycle of the document.

Manage Disputes App

Are you a shipper with a question about your **Disputes** app? If so, take a look at these FAQs.

How often are the worklists updated?

The worklists are updated when you open the app, filter the worklists, or use the manual refresh function.

How can I find a dispute in the worklist?

You can use the search option in the header area of the worklist page to find a dispute.

How do I know when a carrier has submitted a dispute?

You can view the disputes from carriers that need your action in the **For Review** worklist.

The system displays the disputes from carriers that are reviewed and submitted by you in the **Reviewed** worklist.

The system displays disputes that have been resolved in the **Resolved** worklist.

What happens when the carrier accepts all my proposals?

The system sets the document to **Resolved** status and the carrier also sees the document as **Resolved**.

General Settings App

Are you a shipper with a question about your **General Settings** app? If so, take a look at these FAQs.

How do I create a new tolerance definition?

On the **Define Tolerance Range** tab, click **Edit** to display the list of existing tolerance definitions. Then click **Add** to add a new line to the list, which you can then configure to your requirements, and click **Save** to save your settings.

How do I edit a tolerance definition?

On the **Define Tolerance Range** tab, click **Edit** to display the list of existing tolerance definitions, change the configurations as required, and click **Save** to save your settings.

How do I edit a tolerance group?

On the **Define Tolerance Groups** tab, click the tolerance group you want to edit. In the window that then appears, click **Edit** to display dropdown menus where you can change the configurations as required. Finally, click **Save** to save your settings.

How do I assign a new tolerance group?

On the **Assign Tolerance Groups** tab, click **Edit** to display the list of existing tolerance groups assignments. Then click **Add** to add a new line to the list, which you can then configure to your requirements, and click **Save** to save your settings.

How do I edit a tolerance group assignment?

On the **Assign Tolerance Groups** tab, click **Edit** to display the list of existing tolerance groups assignments. You can then use the dropdown menus to change the configurations as required. Finally, click **Save** to save your settings.

General Settings

Manage Entities App

Are you a shipper with a question about your Manage Entities app? If so, take a look at these FAQs

I am unable to change the address of a docking location in the Manage Entities app. Why?

You cannot change the address of a docking location as you have maintained the address information in the Manage Locations app.

If you have the `LocationProcessTemplate` role template assigned, you can update the address of the location associated with the docking location in the Manage Locations app.

What is Share Entity? What does the Permissions field in this section indicate?

You can share the loading point, docking location, gate, and yard details with your business partner. Based on the settings you provide in the Permissions field, the business partner can either view or view and edit the entity details.

Can I share a loading point with multiple docking locations?

Yes, you can use the Enable Sharing with Docking Locations indicator to enable this feature. When you enable, the system displays the Shared Docking Locations field. You can choose the docking locations in the same time zone with which you want to share this loading point. Note that the system shares the same loading point capacity across all the shared docking locations.

Can I share a gate with multiple yards?

Yes, you can use the Enable Sharing with Yards indicator to enable this feature. When you enable, the system displays the Shared Yards field. You can choose the yards in the same time zone with which you want to share this gate.

Location ID not mandatory when I create a new loading point. Why?

As a loading point will be associated with a docking location, Location ID is not mandatory.

What is a Block Time in a loading point in the Manage Entities app and what is a block time in the Manage Dock Appointments app?

When you create a time block, the system blocks this time and you cannot create appointments during this time. You can also choose to create a time block only for carriers where only carriers cannot create appointments during this time.

For planned time blocks, we recommend you to use the loading point level settings in the Manage Entities app.

For any unplanned time blocks, we recommend you to use the block time settings in the Manage Dock Appointments app.

I am unable to add a time block in a loading point. Why?

If you have shared a loading point with multiple docking locations, you cannot add a time block for this loading point. You can disable the Enable Sharing with Docking Locations setting and then create a time block.

I am unable to enable the Enable Sharing with Docking Locations setting for a loading point. Why?

If you have blocked time for a loading point, the system does not allow you to enable the Enable Sharing with Docking Locations setting. You can delete the time block and then enable this setting.

When should a driver arrive at the gate?

The driver must arrive latest by the Arrival Lead Time that you specify in the Gate settings.
