If you use a component to categorize your issue, use SBN-LBN-OB (for issues relevant to the procedure described in this document) or SBN-LBN (for general issues with SAP Business Network for Logistics).

If you don't know your S-User ID, see the next question.

To create an incident (report an issue), I need to provide my S-User ID. What if I don't know my S-User ID?

If your company didn't have an S-User ID before registering SAP Business Network for Logistics, check the email with the subject "*[PRIVATE] Your key to the SAP ecosystem*" (see Step 3 in Register (for Free) SAP Business Network for Logistics in SAP Store). The email contains the S-User ID for your company. The password is set when the email receiver activates the account using the link provided in the email. For more information, watch a short video *S-Users Management* in Carrier Administrative Trainings .

It's also possible that your company already had an S-User ID before registering SAP Business Network for Logistics. In that case, you need to contact a user administrator in your company for S-User sign-in credentials.

If you have trouble identifying who the S-User is in your organization, you can contact the Customer Interaction Center (CIC).

For more information, see the SAP for Me Online Help under Access and Authorizations.

Next Steps

We recommend that you familiarize yourself with the *Administration Guide for Logistics Providers*, which contains lots of useful information, including how to administrate your account. When using the apps, you can explore the user assistance by calling up the in-app help via the *Open Help* icon on the SAP Fiori Launchpad. You'll also find more useful information on the SAP Help Portal for SAP Business Network logistics providers.

The following sections in the user assistance may be of interest to you:

Business Area	Document Section
Administrate your account	In the *Administration Guide for Logistics Provider*: • Business Configuration • Connectivity: Configuring inbound/outbound connections for implementing APIs and EDIs
Automate processes through B2B integration	Use the documents in the Integrate section on SAP Help Portal to learn how to integrate via EDI or API. This is an optional way to automate processes. Alternatively, you can use our web UIs.
Use web UIs in daily operations	Use the documents in the Use section on SAP Help Portal to learn how to use our web UIs to perform freight contracting, dock appointment scheduling, tracking, and freight settlement, etc.
