STEP 3: CONFIGURE INBOUND CONNECTIONS

On the *Manage Network* tab of your SAP Fiori launchpad, select the *System Connections* app.

Proceed as follows:

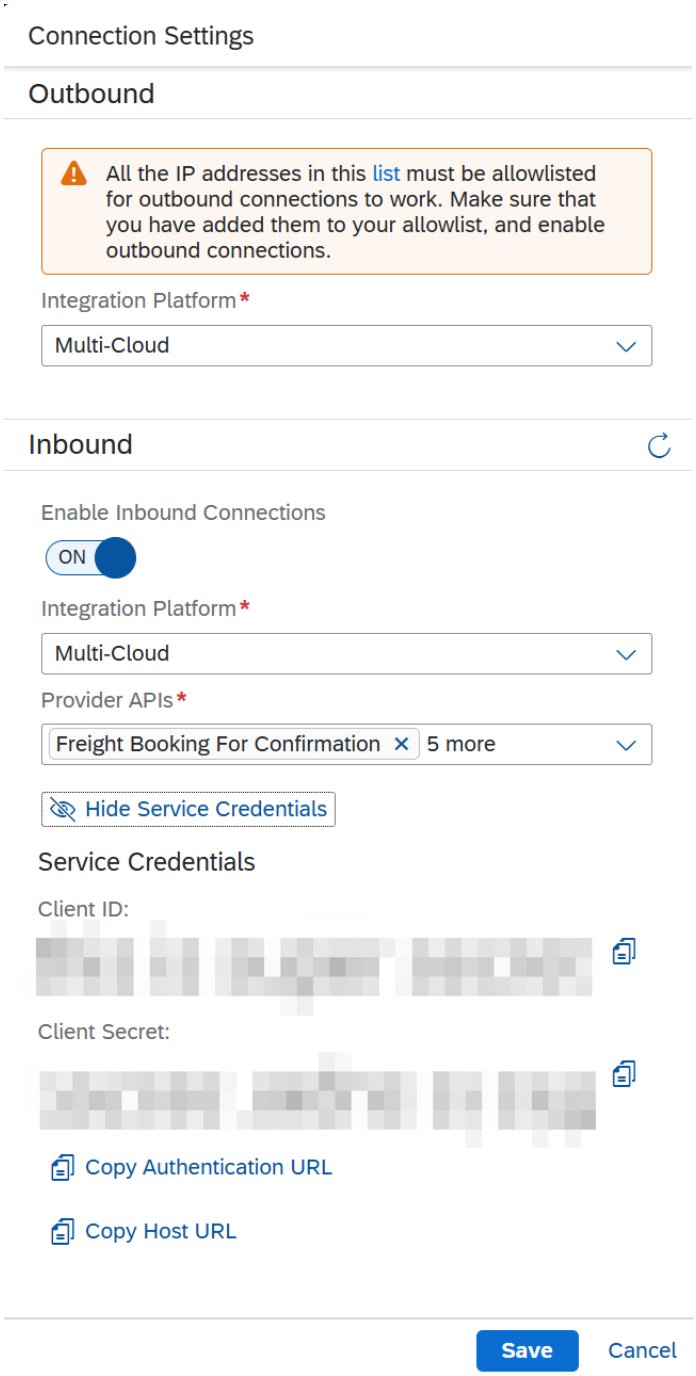

1. Choose *Connection Settings* in the upper-right corner.
2. Turn on the *Enable Inbound Connections* toggle.
3. Select the *Integration Platform* as *Multi-Cloud.*

With the new *Multi-Cloud* integration platform, you can generate OAuth credentials for inbound authentication from the app itself.

Proceed as follows:

1. Select the list of *Provider APIs* that you want to connect to in SAP Business Network for Logistics.
2. Choose *Save*.
3. Generate or view the credentials by choosing *Show Service Credentials*.
   It might take a while for the first time as the request is handled asynchronously in the backend authentication service.

Provider API Endpoints for Inbound Scenarios

Depending on the data center that you're onboarded in, the host URL differs. You can identify the host URL relevant for your tenant *'Host URL'* in *Connection Settings* dialog box.

Provider API	EU	US
Provider API for Freight Tendering	https://api.logistics.eu.business-network.cloud.sap/http/v1/LbnFreightOrderForSubcontracting/{orderingPartyLbnId}/{originatorId}/{freightOrderId}/carrierResponse	https://api.logistics.us.business-network.cloud.sap/http/v1/LbnFreightOrderForSubcontracting/{orderingPartyLbnId}/{originatorId}/{freightOrderId}/carrierResponse
Provider API for Freight Subcontracting	https://api.logistics.eu.business-network.cloud.sap/http/v1/LbnFreightQuotation	https://api.logistics.us.business-network.cloud.sap/http/v1/LbnFreightQuotation
Provider API for Freight Booking for Confirmation	https://api.logistics.eu.business-network.cloud.sap/http/v1/FreightBookingConfirmation	https://api.logistics.us.business-network.cloud.sap/http/v1/FreightBookingConfirmation
Provider API to Create Planned Freight Documents from External System	https://api.logistics.eu.business-network.cloud.sap/http/v1/TransportationDocument	https://api.logistics.us.business-network.cloud.sap/http/v1/TransportationDocument
Provider API for Order Events	https://api.logistics.eu.business-network.cloud.sap/http/http/v1/tracking/events	https://api.logistics.us.business-network.cloud.sap/http/http/v1/tracking/events
Provider API for Invoicing	https://api.logistics.eu.business-network.cloud.sap/http/v1/LogisticsInvoice	https://api.logistics.us.business-network.cloud.sap/http/v1/LogisticsInvoice
Provider API for Invoice Cancellation	https://api.logistics.eu.business-network.cloud.sap/http/v1/LogisticsInvoiceCancel	https://api.logistics.us.business-network.cloud.sap/http/v1/LogisticsInvoiceCancel

STEP 4: EMAIL NOTIFICATION FOR INTEGRATION ERRORS

You have to configure the Email notification feature in the *Manage Notification Settings* app so that you are informed in case of integration errors.

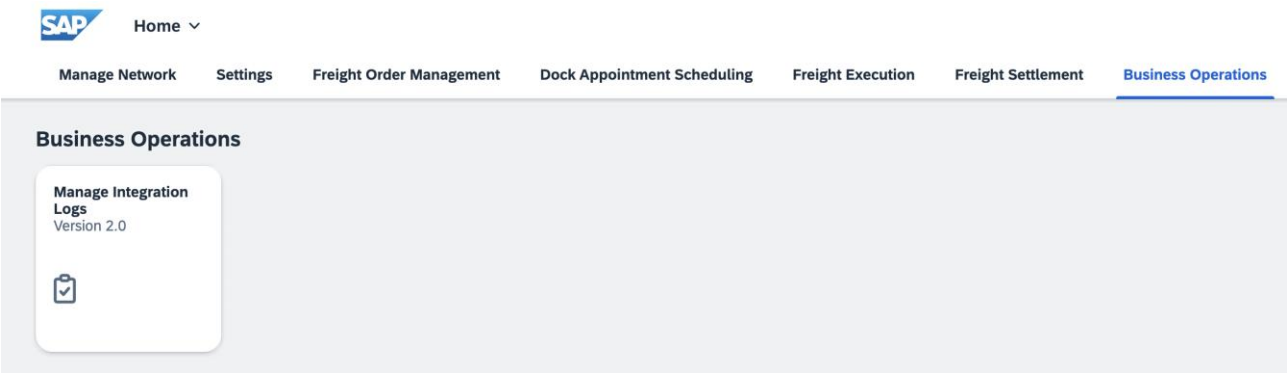

To do so, enable on-event notification for the *Integration Error* V2 Scenario.

Please refer to the following blog for more details:

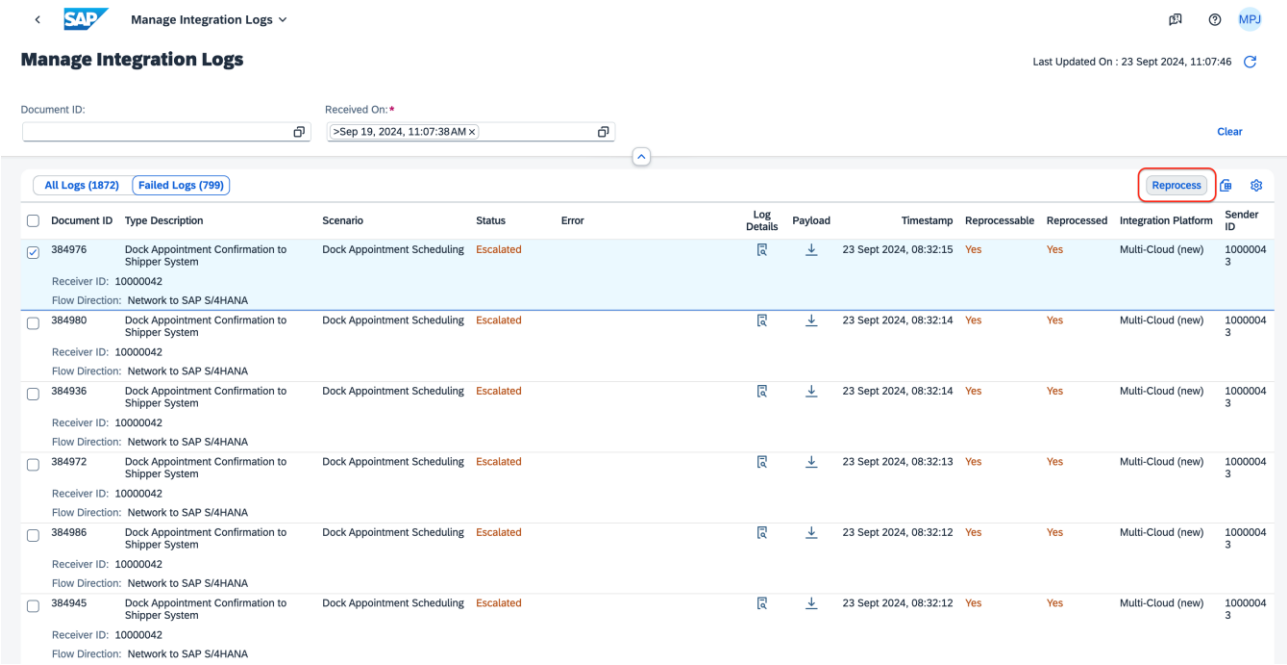

Email notification for integration error in SAP Business Network for Logistics | SAP Blogs

OPERATIONAL MONITORING

The *Manage Integration Logs* app allows you to monitor the inbound and outbound messages that are processed from SAP Business Network for Logistics.

Messages with status *Failed* or *Escalated* can be reprocessed.
