Appointments that are not booked or that were canceled, are not displayed in the calendar and therefore cannot be found by the search.

You can create a new appointment for the docking location by choosing **Maintain Appointment**. You can block a time slot for the loading point of a docking location by choosing **Block Time**.

Table View

From the calendar view, you can switch to the table view by choosing the table icon in the top right corner.

You can filter appointments that are displayed in the **Active Appointments** and **Ready for Booking** tabs based on **Freight Order**, **Ordering Party**, **Carrier**, **Planned Activity Date**, and **Appointment Date** (as the standard filters). The filters are combined using 'AND'. For example, if you want to search for blocks (blocked time slots), use only the **Appointment Date** filter and clear the **Planned Activity Date** filter. Blocks do not have an appointment date.

In the table view, you can view the details of the docking location. You can filter appointments that are displayed in the **Active Appointments** and **Ready for Booking** tabs based on **Freight Order**, **Ordering Party**, **Carrier**, **Planned Activity Date**, and **Appointment Date** (as the standard filters).

The system displays the active appointments and the orders that are ready for booking in a worklist view.

Active Appointments

You can view all the active appointments for the selected docking location. You can filter the appointments based on the loading points of the docking location.

When searching for an appointment, you must provide a range either in the **Planned Activity Date** field or in the **Appointment Date** field. You can also provide date ranges in both fields.

For each active appointment, the system displays the following details:

- **Appointment/Ordering Party**

  Displays the appointment number, ordering party details, and the status of the appointment. The system displays one or more of the following statuses:

  - **Check-In Begin**
  - **Check-In On Hold**
  - **Checked In**
  - **Load Begin**
  - **Load End**
  - **Unload Begin**
  - **Unload End**
  - **Executed**
  - **Unload Begin - Delayed**
  - **Load Begin - Delayed**

  For more information about setting statuses, see Appointment Details under **Reporting Events**.

- **Loading Point**

  Displays the name of the loading point

- Freight Order ID
- License Plate
- Delivery ID
- Reference Documents

  Displays the reference document type and the reference document ID
- Carrier

  Displays the carrier details
- Appointment Date
- Start Time
- End Time
- Planned Activity Date
- Activity Type

  Displays the type of activity such as loading, unloading, or both
- Gate ID
- Gate Location and Description
- Planned Check-In Time
- Created By
- Created On
- Changed By
- Changed On

ℹ Note

- You can control the fields that are displayed in the table by choosing the settings icon.
- The system displays DST STARTS when the day light savings time begins and DST ENDS when the day light savings time ends.
- You can export this table into a spreadsheet by choosing the export to spreadsheet icon.

Ready for Booking

You can view details of the orders that are ready for booking and the appointment requests created by the API. You can view the orders for which there are no appointments in the Not Booked tab. You can view the orders for which there are canceled appointments in the Canceled tab. You can view all the orders in the All tab.

When searching for an appointment, you must provide a range in the Planned Activity Date field.

For each order that is ready for booking, the system displays the following details:

- Ordering Party/Reference Document

  Displays the ordering party ID and the details of the reference document for which the appointment has been created. You can view the reference document type and the reference document ID.

- Reference Documents

  When you choose the number of reference documents on the worklist, you can view the type and ID for each reference document.

- Appointment Status

  Displays whether the appointment is Not Booked or Canceled.

- Carrier
- Arrival Date and Time
- Departure Date and Time
- Carrier Booking Cut-Off
- Reference Document Source

Note that you can control the fields that are displayed in the table by choosing the settings icon.

You can select an order and create a new appointment for the order by choosing Maintain Appointment. You can select an order and block a time slot for the order by choosing Block Time.

You can export this table into a spreadsheet by choosing the export to spreadsheet icon.

Appointment Details

The appointment details page consists of the header area and multiple tabs. On the header area, you can view the carrier's name and the reference document details.

You can report events by choosing Report Events. When you choose Manage, you can select whether you want to Edit, Reschedule, or Cancel the appointment. Note that the Reschedule button is visible only in appointments that are reschedulable. That is only when the appointment status is Overdue, Arrival Delayed, or Check-In Canceled.

The appointment contains information categorized various sections.

Information

The system displays the following information under this section:

- General

  You can view the following details:

  - Ordering Party
  - Activity Type
  - Reference Documents
  - Reference Document Source
  - Dangerous Goods

    If the ordering party has provided dangerous goods information, then the system displays Yes. When you choose Yes, the system opens a window containing details about the item type, relevant regulations, and more detailed information such as storage instructions, control temperature, and emergency temperature.

- Other Details

- **Customs Relevant**

  Note that the system displays this field only if the ordering party has maintained this information in their external system.

- **Combined Traffic**

  Note that the system displays this field only if the ordering party has maintained this information in their external system.

- **Incoterm**

  Displays the Incoterm code.

  You can find the list of standard Incoterm codes supported by SAP Business Network for Logistics here: Incoterm Descriptions.

  Note that the system displays this field only if the ordering party has maintained this information in their external system.

- **Incoterm Location**

  Displays the location in SAP Business Network for Logistics or the Incoterm location retrieved from the external system.

  Note that the system displays this field only if the ordering party has maintained this information in their external system.

  - If the location is maintained in SAP Business Network for Logistics, the system tries to retrieve the description from the **Manage Locations** app under **Location Details** > **Description**.
  - If the location is not maintained in the **Manage Locations** app, the system displays the incoterm location description retrieved from the external system (for example, TM).
  - Exception: In the **Self-Book Dock Appointments** app for carriers, the **Incoterm Location** will always be set to the incoterm location retrieved from the external system (for example, TM).

- **Country of Final Destination**

  Note that the system displays this field only in those appointments that are created through appointment APIs.

- **Booking Details**

  The system displays the following information:

  - **Docking Location**
  - **Loading Point**

    Displays the loading point details for the appointment. When you maintain an appointment from a loading point calendar, the system prefills this field with the respective loading point.

  - **Remarks**

    Display additional information that was maintained for a loading point.

  - **Planned Start Date and Time**
  - **Planned End Date and Time**
  - **Appointment Start Date and Time**
  - **Appointment End Date and Time**
  - **Business Hours**
  - **Preferred Slots** (requested dates or acceptable dates)

For more information about the values and their origin, see Integration of Dock Appointment Scheduling with Freight Orders and Provider API for Dock Appointment Scheduling.

- **Active Vehicle Resource**

  You can view the active vehicle resource details such as **Transport Means Type**, **Vehicle Category Code**, **Vehicle Type Code**, and **Vehicle Resource ID**.

- **Driver Details**

  You can view the driver details such as **Driver Name / Language**, **Additional Driver Name**, and **Driver Phone Number**.

- **Resource Details**

  You can view the **License Plate / Country or Region of Registration** (of the truck), **Truck ID**, and **Trailer ID**.

- **Administrative Details**

  You can view the administrative details such as **Created By**, **Created On**, **Changed By**, and **Changed On**.

- **Guest User**

  You can view the guest user details such as **Name**, **Company Name**, and **Email ID**.

Reported Events

You can view all events reported by you in the **Manage Dock Appointments** app and **Manage Gate Operations** app. You can also view all events reported by the carrier in their **Freight Orders for Reporting** app. You can view the following information for each event:

- **Event Type**
- **Event Date and Time**
- **Comment**

Reference Document

You can view the reference document details such as reference document type and reference document ID, stop details, and arrival and departure date and time.

Stops

Displays the visual representation of the freight order execution flow with the source location, intermediate stop locations, and destination location. You can see the appointment ID created in SAP Business Network for Logistics, the expected dates for departure and arrival, and the activity type performed for the appointment, such as loading or unloading.

When you choose a stop, the system displays the following stop details in a dialog box:

- **Arrival Date and Time**

  Displays the expected arrival date and time defined in the corresponding freight order.

  This comes from the `TransportationOrderRequest` message type in SAP Transportation Management or Transportation Management (TM) in SAP S/4HANA, using the `ExpectedArrivalDateTime` field.

- **Departure Date and Time**

  Displays the expected departure date and time defined in the corresponding freight order.

  This comes from the `TransportationOrderRequest` message type in SAP Transportation Management or Transportation Management (TM) in SAP S/4HANA, using the `ExpectedDepartureDateTime` field.

- **Requested Start Date and Time**

  Displays the requested start date and time defined in the corresponding freight order.

  This comes from the `TransportationOrderRequest` message type in SAP Transportation Management or Transportation Management (TM) in SAP S/4HANA, using the `RequestedLoadingDateTimePeriod` and `RequestedUnloadingDateTimePeriod` fields.

- **Acceptable Start Date and Time**

  Displays the acceptable start date and time defined in the corresponding freight order.

  This comes from the `TransportationOrderRequest` message type in SAP Transportation Management or Transportation Management (TM) in SAP S/4HANA, using the `AcceptableLoadingDateTimePeriod` and `AcceptableUnloadingDateTimePeriod` fields.

- **Requested End Date and Time**

  Displays the requested end date and time defined in the corresponding freight order.

  This comes from the `TransportationOrderRequest` message type in SAP Transportation Management or Transportation Management (TM) in SAP S/4HANA, using the `RequestedLoadingDateTimePeriod` and/or `RequestedUnloadingDateTimePeriod` fields.

- **Acceptable End Date and Time**

  Displays the acceptable end date and time defined in the corresponding freight order.

  This comes from the `TransportationOrderRequest` message type in SAP Transportation Management or Transportation Management (TM) in SAP S/4HANA, using the `AcceptableLoadingDateTimePeriod` and/or `AcceptableUnloadingDateTimePeriod` fields.

The following **Appointment Details** are displayed for all appointments created in SAP Business Network for Logistics but not for the currently displayed appointment and not for external appointments:

- **Appointment ID**

  Displays the appointment ID if the appointment was created by SAP Business Network for Logistics . You can use this ID to search for the appointment in its corresponding docking location in the **Manage Dock Appointments** app.

- **Appointment Start Date and Time**

  Displays the start date and time of the appointment after it was booked.

- **Appointment End Date and Time**

  Displays the end date and time of the appointment after it was booked.

Cargo

You can view the cargo details such as follows:

- **Cargo Item**

  Displays the description of the cargo item.

- **Type**

  Displays whether the cargo item is a package, product, or a container.

- **Logistical Details**

  Displays the quantity, gross weight, gross volume, and dimensions.

- **Equipment Details**

  Displays the equipment type and equipment group.

- **Reference Documents**

  Displays the reference document details.

- **Special Requirements**

  Displays the following:

  - **Dangerous Goods**

    The system displays the dangerous goods information that you provided in the freight order in the **Cargo** section by choosing **Yes** in the **Dangerous Goods** column. This opens a window containing details about the item type, relevant regulations, and more detailed information such as storage instructions, control temperature, and emergency temperature.

  - **Temperature Requirements**

- **Other Details**

  Displays the following:

  - **Over-Dimensional**
  - **Non-Stackable**
  - **High Value**

Notes

You can enter additional information in this section. You can also view the notes added by the carrier.

Attachments

You can upload attachments in this section. You can also view the attachments uploaded by the carrier.

Reporting Events

You can report events for confirmed appointments. When you navigate to the details page of the appointment, you can choose the **Report Events** button to report events. If the appointment contains the activity type loading, you can report the start date and time of loading and the end date and time of loading. You can also report a delay for the loading start event. You can specify a delay date and time, delay reason, and comments. Similarly, if the appointment contains the activity type unloading, you can report the start date and time of unloading and the end date and time of unloading.

ℹ Note

The **Executed** status is only set in the following cases:

- Loading end or unloading end is directly reported in the **Manage Dock Appointments** app.
- The checkout in the related gate logbook was completed in the **Manage Gate Operations** app.

SAP Business Network Freight Collaboration does not receive status updates from external systems. Outside the **Dock Appointment Scheduling** apps, the status can only be manually reported using the **Freight Orders for Reporting** app.

Rescheduling an Appointment

You can directly reschedule an appointment by choosing **Manage** and **Reschedule** on the details page of the appointment. The system also displays the **Reschedule** button on the worklist page and on the warning message that is displayed on the **Information** tab in the appointment details page. Note that this **Reschedule** button appears only on appointments that are reschedulable with the appointment status as **Overdue** or **Arrival Delayed**.

When you choose **Reschedule**, the system displays the **Reschedule Appointment** dialog box.

The system displays the following information:

- **Appointment ID**
- **Ordering Party**
- **Loading Point**
- **Appointment Date**
- **Available Time Slots**

You can modify the loading point, appointment date, and available time slots and you can reschedule the appointment.

You can select whether you want to update all appointments in the group. Note that the system selects this option by default. You can choose **NO** if you do not want to update all appointments in the group.

Maintaining a Dock Appointment

Context

In most cases, carriers maintain dock appointments for freight orders. However, there are certain scenarios, where you as a shipper may have to maintain dock appointments, for example, when the **Carrier Booking Cut-Off Time** for the freight order has passed. The **Manage Dock Appointments** app provides shippers with the flexibility to maintain a dock appointment for a certain freight order.

To maintain a dock appointment, proceed as follows:

Procedure

1. Select a docking location from the **Docking Location** table. The dock calendar for the docking location appears. You can also switch to the table view by choosing the table icon.
2. If you are in the calendar view, perform the following:
    a. Choose **Maintain Appointment**. The **Select Order for Appointment** dialog box appears. You can filter the list by **Reference Document ID**, **Appointment Status**, **Carrier**, **Arrival Date and Time**, and **Departure Date and Time**.
    b. Select the order for which you want to maintain an appointment. Maintain appointment pane appears on the right.
3. If you are in the table view, perform the following:
    a. Navigate to the **Ready for Booking** tab.
    b. Select the order for which you want to maintain an appointment and choose **Maintain Appointment**. Maintain appointment pane appears on the right.
4. Enter the following details:
    - **Loading Point** (only loading points with the matching activity type will be available)
    - **Available Time Slots**

      Note that if you have disabled the time slot option for a loading point in the **Manage Entities** app, you may not be able to view the time slots for the appointments at this loading point. In such scenarios, you can maintain the appointment without selecting a time slot.

If you have enabled the **Restrict Maximum Duration of Consecutive Time Slots** and the **Use Derived Appointment Duration** options in the **Manage Entities** app, the **Maximum Duration of Consecutive Time Slots** and **Derived Appointment Duration** fields are displayed. For more information, see Defining Loading Point Settings.

- **Preferred Slots** (shows the requested dates and acceptable dates)

  For more information about the values and their origin, see Integration of Dock Appointment Scheduling with Freight Orders and Provider API for Dock Appointment Scheduling.

- **Reference Documents**
- **Driver Details** (Optional)
- **Resource Details** (Optional)

5. If there is any additional information about the appointment, enter it in the **Notes** section.

   Notes are intended to provide additional information related to the business document or business process. We recommend you to avoid entering sensitive personal data.

6. If there are any attachments that you want to add to the appointment, choose the **Add** button under the **Attachments** section.

   You can only upload files that fulfil the following criteria:

   - Files of the formats: jpg, jpeg, gif, png, pdf, doc, docx, xls, xlsx, tiff, tiff-fx
   - Image files less than 6MB file size
   - Document files less than 5MB file size
   - File name less than 150 characters including file extension

7. Choose **Maintain**.

Results

The system maintains a dock appointment for the order.

Maintaining a Grouped Appointment

When you select a docking location in the calendar view and switch to the table view, you can select two or more documents from the **Ready for Booking** tab and maintain multiple appointments in a single group with the same time slot.

Note that the system enables you to create a grouped appointment only when the following attributes of the selected documents are same:

- **Location**
- **Loading Point** (only loading points with the matching activity type will be available)
- **Activity Type**
- **Transport Means Description**
- **Transport Means Type**
- **Arrival Date and Time**
- **Departure Date and Time**

To maintain multiple appointments in a single group, proceed as follows:

1. Select two or more documents with the similar attributes from the **Ready for Booking** tab and choose **Maintain Appointment**.

The system creates a grouped appointment. Note that the system displays a confirmation message to notify you that the system creates a grouped appointment and not individual appointments for each document.

As of now, you can only select up to 20 documents to create a grouped appointment.

2. You can view grouped appointments in the **Grouped Appointments** tab. You can perform the following:
    - You can add or remove documents here. When you choose **Add**, the system displays the list of documents that contain similar attributes. You can select the documents and choose **Add to Group**.
    - You can choose the appointment ID to switch to a different appointment that is not the current appointment.
3. On the **Scheduling** tab, specify the **Loading Point** and **Date** (only loading points with the matching activity type will be available).
4. Depending on the duration of the loading or unloading activity, choose one or more consecutive time slots from the **Time Slot** list.

    Note that if you have disabled the time slot option for a loading point in the **Manage Entities** app, you may not be able to view the time slots for the appointments at this loading point. In such scenarios, you can maintain the appointment without selecting a time slot.

    If you have enabled the **Restrict Maximum Duration of Consecutive Time Slots** and the **Use Derived Appointment Duration** options in the **Manage Entities** app, the **Maximum Duration of Consecutive Time Slots** and **Derived Appointment Duration** fields are displayed. For more information, see Defining Loading Point Settings.
5. On the **Information** tab, enter the following under **Driver Details**:
    - **Driver Name**
    - **Driver Phone Number**
    - **Additional Driver Name**
    - **Additional Driver Phone Number**
6. On the **Information** tab, enter the following under **Resource Details**:
    - **License Plate / Country or Region of Registration** (of the truck)
    - **Truck ID**
    - **Trailer ID**
7. Choose **Maintain**.

Results

A grouped appointment has been maintained for documents. You can find this appointment on the **Active Appointments** table. From there, you can access the appointment and view the details. You can also edit or cancel the appointment from there. When you edit or cancel, you can choose whether you want to edit or cancel only the current appointment or all the appointments in the group.

ℹ Note

Once you maintain the grouped appointment, you can edit the grouped appointment and add notes and attachments. Note that when you do so, the notes and attachments are added only to the current appointment and not all the appointments in the group.

Blocking Time Slot

You can block one or more of time slots for a selected loading point. The system allows you to configure the reservation capacity, thereby allowing you to either fully block or partially block a time slot.
