Block Time

To block time slots, proceed as follows:

1. Select a docking location from the **Docking Location** table. The dock calendar for the docking location opens. You can also switch to the table view by choosing the table icon.
2. If you are in the calendar view, choose **Block Time**.

   If you are in the table view, you can choose **Block Time** from either **Active Appointments** tab or **Ready for Booking** tab.

   In both the views, block time details pane appears on the right.
3. In the **Block Time** dialog box, specify the following fields:
   - **Description**
   - **Start Date and Time**
   - **End Date and Time**
   - **Disable Appointment Booking**

     Specify whether you want to disable appointment booking only for the carriers or for all.

     If you select **For All**, both you and the carriers cannot book appointments during the blocked time.

     If you select **For Carriers**, only the carriers cannot book an appointment during the blocked time. The blocked time will be available for you to book an appointment.
   - **Max. Capacity**

     When the **Max. Capacity** toggle is enabled, the maximum capacity is blocked for this loading point, and the loading point capacity is hidden because it is no longer relevant.

     For more information, see the following blog: SAP Business Network for Logistics - Dock Appointment Scheduling: Maximum Capacity Blocker.
   - **Including Overbooking**

     When the **Include Overbooking** toggle is enabled, the capacity maintained under **Overbooking Limit** is blocked for this loading point.
   - **Loading Point/Capacity**

     Specify the loading points for which the time slot must be reserved and the corresponding capacity to be blocked.
4. Choose **Save**.

ℹ Note

Duration

The minimum duration when adding a block is 5 minutes, and the maximum duration is 31 days.

Capacity Check

If a blocker or appointment already exists, you can only block the remaining capacity, not the maximum capacity. The capacity to be blocked must always be less than or equal to the maximum capacity of the loading point validity period. If a new blocker exceeds the maximum capacity, it cannot be created. To resolve this, you can either reduce the capacity of the blocker or cancel existing blockers or appointments.

ℹ Note

You can block the time for a loading point that has been shared with multiple docking locations. When you do so, the system blocks the entire capacity of the loading point for the blocked period across all the docking locations with which the loading point has been shared.

If the docking locations that share the loading point are in the same tenant, then the user can release the block.

If the docking locations that share the loading point are in different tenants, then only the user who created the time block can release the same.

Results

The system blocks the specified capacity for the specified time in the selected loading points. Note that neither you nor the carrier can book an appointment in the blocked time slot.

Release Blocked Time Slot

To release blocked time slots, click to open a reserved time slot on the dock calendar and then choose **Release**. If you have created a block for multiple loading points, you can release all blocks created in one go if you choose **Release All** instead of releasing each time slot individually.

In the **Manage Dock Appointments** app, when you release a single block from a recurring block series, this does not change the recurring block series in the **Manage Entities** app.

Rescheduling a Dock Appointment

The Manage Dock Appointments shows you the dock calendar for each docking location of your organization. The calendar visualizes the dock appointments booked at the loading points and the downtimes.

You can easily reschedule dock appointments on the calendar page. This also automatically notifies the corresponding carrier about the appointment change.

ⓘ Note

In case multiple people are working in the dock calendar, you can use the **Refresh** button to retrieve an up-to-date view of the calendar.

You can reschedule a dock appointment by one of the following ways:

Drag-And-Drop

1. Click a docking location on the **Docking Location** table. The dock calendar of the docking location opens.
2. Locate the appointment that you want to reschedule. You may need to navigate through weeks to locate an appointment that is not displayed in the current one.
3. Drag-and-drop the appointment to the desired time slot.

Manual Edit

1. Click a docking location on the **Docking Location** table. The dock calendar of the docking location opens.
2. Locate the appointment that you want to reschedule. You may need to navigate through weeks to locate an appointment that is not displayed in the current one.

3. Double-click the appointment. The details page of the appointment opens.
4. Modify the following fields of the appointment.
    - Loading Point
    - Appointment Start Date and Time
    - Appointment End Date and Time
5. (Optional) You can also modify the driver information of the appointment during rescheduling.
6. Choose **Save**.

Result

The dock appointment is rescheduled and an email notification will be sent to the corresponding carrier.

Canceling a Dock Appointment

To cancel a location, proceed as follows:

1. Click a docking location on the **Docking Location** table. The dock calendar of the docking location opens.
2. Use the search bar to locate the appointment that you want to cancel. You can also navigate through weeks to locate an appointment that is not displayed in the currently one.
3. Double-click the appointment. The details page of the appointment opens.
4. Choose **Cancel Appointment** on the upper-right corner of the details page.

Result

The dock appointment is canceled and an email notification will be sent to the corresponding carrier.

Manage Gate Operations

As a gate operations manager, you can use this app to view all the freight orders and appointments that are ready to check-in and checkout of the yard.

You can find the gate logbook details of the vehicle that arrives at the yard. You can find and verify the details of the appointments and freight orders that are part of this vehicle and perform the check-in process. Once the vehicle checks-in, the system updates the relevant documents.

Similarly, you can also find the gate logbook details of the vehicles that leave the yard. You can find and verify the details of the appointments and freight orders that are part of this vehicle and perform the checkout process. Once the vehicle checks-out, the system updates the relevant documents.

Prerequisites

To use this app, you must add one or several roles to your role collection. The required role templates and application identifiers are described in the Available Roles for Shippers section of the Administration Guide for Shippers.

Gate Logbook

The gate logbook contains all the freight orders and appointments that are part of the check-in vehicle. As you perform check-in and checkout processes for a vehicle, the system combines the associated documents as a single gate logbook.

The system creates a gate logbook when the carrier updates the vehicle license plate details for the associated freight orders and appointments, either during confirmation or appointment booking. If the carrier has not updated the vehicle license plate details, the system creates a gate logbook during the check-in process when the gate operations clerk updates the vehicle license plate details. The system creates a single gate logbook for a grouped appointment.

App Details

The **Manage Gate Operations** app consists of a main view and a detail view.

When you launch the app, the system displays the main view with the following areas:

- Filter bar

  Using the filter bar in the header, you can filter the gate logbook IDs to restrict the number of gate logbook IDs displayed. You can filter based on one or more of the following attributes:

  - **Ordering Party**
  - **Gate Logbook ID**
  - **Vehicle License Plate**
  - **Gate ID**
  - **Planned Check-In Time**
  - **Docking Location**
  - **Appointments**
  - **Reference Documents**
  - **Status**
  - **Document Status**
  - **Carrier**
  - **Actual Check-In Time**
  - **Actual Checkout Time**

- Worklists

  You can use the following worklists: **Waiting for Check-In**, **Checked In**, and **Checked Out**.

From the **Checked In** tab and **Checked Out** tab, you can navigate to the detail view.

Worklist (Manage Gate Operations)

The worklist area contains the following tabs: **Waiting for Check-In**, **Checked In**, and **Checked Out**.

Waiting for Check-In

The **Waiting for Check-In** worklist displays all the gate logbooks that are yet to be checked in to the yard. This worklist contains two subtabs: **With License Plate** and **Without License Plate**. The system displays the following information for each gate logbook ID:

- **Ordering Party/Gate Logbook ID**

  Displays the ordering party details and the gate logbook ID

- **Carrier/Vehicle License Plate**

  Displays the carrier details and the vehicle license plate details. Note that the vehicle license plate field is enabled only in the **With License Plate** tab.

- **Planned Check-In Date**

  Displays the planned check-in date of the vehicle according to the appointment details

- **Check-In Time**

  Displays the planned check-in time of the vehicle according to the appointment details

- **First Loading Point**

  Displays the first loading point details. The vehicle arrives at this loading point in the docking location.

- **Docking Location**

- **Appointments**

  Displays the IDs of the associated appointments

- **Reference Documents**

  Displays the list of reference documents

- **Status**

  Displays whether the gate logbook is ready for check in or check-in is in progress or on hold.

  For the gate logbooks for which you have requested for documents from your external system, you can view the status of the document request. The document status displays one of the following:

  - Documents requested

    Displays this status when you have requested for documents using the **Request Documents** button.

  - Documents pending

    Displays this status when the documents are yet to be received from external system.

  - Documents unavailable

    Displays this status when the documents are unavailable in the external system.

  - Documents received

    Displays this status when the documents are received from external system.

Checked In

The **Checked In** worklist displays all the gate logbook IDs that are checked in to the yard. The system displays the following information for each gate logbook ID:

- **Ordering party/Gate Logbook ID**

  Displays the ordering party details and the gate logbook ID

- **Carrier/Vehicle License Plate**

  Displays the carrier details and the vehicle license plate details

- **Check-In Date**

  Displays the date on which the vehicle checked in

- **Check-In Time**

  Displays the time on which the vehicle checked in

- **Driver Details**

- **Resource Details**

- **Docking Location**

- **Appointments**

  Displays the IDs of the associated appointments

- **Reference Documents**

  Displays the list of reference documents

- **Status**

  Displays whether the gate logbook is checked in or checkout is in progress or on hold.

  For the gate logbooks for which you have requested for documents from your external system, you can view the status of the document request. The document status displays one of the following:

  - Documents requested

    Displays this status when you have requested for documents using the **Request Documents** button.

  - Documents pending

    Displays this status when the documents are yet to be received from external system.

  - Documents unavailable

    Displays this status when the documents are unavailable in the external system.

  - Documents received

    Displays this status when the documents are received from external system.

Checked Out

The **Checked Out** worklist displays all the gate logbook IDs that are checked out of the yard. The system displays the following information for each gate logbook ID:

- **Ordering party/Gate Logbook ID**

  Displays the ordering party details and the gate logbook ID

- **Carrier/Vehicle License Plate**

  Displays the carrier details and the vehicle license plate details

- **Checkout Date**

  Displays the date on which the vehicle checked out

- **Checkout Time**

  Displays the time on which the vehicle checked out

- **Driver Details**
- **Resource Details**
- **Docking Location**
- **Appointments**

  Displays the IDs of the associated appointments

- **Reference Documents**

  Displays the list of reference documents

Unconfirmed Appointments

When a carrier has not confirmed an appointment, and the driver has arrived at the gate for the appointment execution, the gate operator can confirm the appointment on behalf of the carrier.

In this scenario, on the worklist area, under the **Waiting for Check-In** tab, you can view a message that there are unconfirmed appointments. To confirm an appointment, proceed as follows:

1. Choose the **Maintain Appointments** hyperlink in the message, to maintain the appointments on behalf of the carrier.

   The system displays the list of unconfirmed appointments for the current day, previous day, and next day. Note that if you want to view any other unconfirmed appointment, you can use the search bar.

2. Select an appointment and choose **Proceed to Maintain**.

   The system navigates you to the **Manage Dock Appointments** app where you can select a time slot and maintain the appointment. Once you maintain the appointment, the system creates a gate logbook for the maintained appointment and navigates you back to the **Manage Gate Operations** app.

Detail View (Manage Gate Operations)

The detail view of a gate logbook consists of a header and several sections.

Header

You can view the following important information about the gate logbook ID:

- **Gate Logbook ID**
- **Check-In Start Time**/**Checkout Start Time**
- **Truck**
- **Carrier**
- **Ordering Party**
- **Weight**

  Displays the weight details in a graphical representation. Note that this information is displayed only when the gate logbook is ready for checkout and you have specified the same unit of measure for all weight details in the **Vehicle Details** section.

- **Planned Check-In Date**/**Planned Checkout Date**/**Actual Checkout Date**
- **Planned Check-In Tim**/**Planned Checkout Time**/**Actual Checkout Time**

- **Status**

  Displays one of the following statuses:

  - **Ready for Check-In**
  - **Check-In in Progress**
  - **Check-In on Hold**
  - **Check-In Canceled**
  - **Checked In**
  - **Checkout on Hold**
  - **Checkout in Progress**
  - **Checked Out**

  When you choose the status, you can view the reason codes that are reported.

  For the gate logbooks for which you have requested for documents from your external system, you can view the status of the document request. The document status displays one of the following:

  - Documents requested

    Displays this status when you have requested for documents using the **Request Documents** button.

  - Documents pending

    Displays this status when the documents are yet to be received from external system.

  - Documents unavailable

    Displays this status when the documents are unavailable in the external system.

  - Documents received

    Displays this status when the documents are received from external system.

Details

The **General Details** section displays the following Information:

General Details

Displays the following attributes:

- **Check-In Gate ID / Checkout Gate ID**
- **Customer/Consignee**
- **Transport Means Description**
- **Transport Means Type**
- **Customs Relevant**

  Note that the system displays this field only if the ordering party has maintained this information in their external system.

- **Combined Traffic**

  Note that the system displays this field only if the ordering party has maintained this information in their external system.

Vehicle Details

Displays the following attributes:

- License Plate
- Vehicle Tare Weight / Unit of Measure
- Vehicle Gross Weight / Unit of Measure
- Maximum Payload Weight / Unit of Measure
- Vehicle Safety

Driver Details

Displays the name, language, phone number, and identification number of the driver and the additional driver.

Resource Details

Displays the license plate / country or region of registration (of the truck), the truck ID, and trailer ID.

Vehicle Seal Details

Displays the seal number, seal verification remark, seal date and time, and person responsible.

Reference Documents

Displays the document type, document ID, created on, and created by.

Equipment

The Equipment section displays the list of trailers and containers associated with the vehicle. This section displays the following Information:

Container

Displays the Registration Number and the Equipment Type.

You can choose the View Weight and Seal Details button to view the weight and seal details. In the Weight Details tab, you can view the following information:

- Source of VGM (Verified Gross Mass) Data
- Weighing Method

  Displays whether the weighing is based on the packed container weight or the individual item weight
- Weight Date and Time
- Container Tare Weight / Unit of Measure

  Displays the total weight of the container when it is empty and the unit of measure
- Material Gross Weight / Unit of Measure

  Displays the total weight of the material including the packaging and the unit of measure
- Dunnage Weight / Unit of Measure

  Displays the weight of the material used to load and secure cargo during transportation and the unit of measure

- VGM (Verified Gross Mass)

  Displays the VGM. VGM is the total weight of the cargo including the container tare weight, material gross weight, and the dunnage weight

- Person Responsible
- Partner Function

In the Seal Details tab, you can view the following information:

- Seal Number

  Note that you can enter an alphanumeric value.

- Seal Verification Remark
- Seal Date and Time
- Person Responsible

> **Note**
> The system displays the checked in weight details when you are in the checkout weight details page. After you perform checkout, the system displays both the check-in weight details and the checkout weight details.

Trailer

Displays the Registration Number and the Trailer Tare Weight.

Cargo

The Cargo section displays the following data about the cargo items involved:

- Cargo Item

  Displays the description of the cargo item.

- Type

  Displays whether the cargo item is a package, product, or a container.

- Logistical Details

  Displays the quantity, gross weight, gross volume, and dimensions.

- Equipment Details

  Displays the equipment type and equipment group.

- Special Requirements

  Displays the following:

  - Dangerous Goods

    If the ordering party has provided dangerous goods information, you can view this information from the Cargo section by choosing Yes in the Dangerous Goods column. This opens a window containing details about the item type, relevant regulations, and more detailed information such as storage instructions, control temperature, and emergency temperature.

  - Temperature Requirements
