Displayed when the charge line is a subsequent charge.

- Invoiced

  Displayed when the charge line is already invoiced.

- Invoice in process

  Displayed when the charges are part of the current invoice.

- Disputed

  Displayed when a planned charge is in dispute.

- **Invoice**

  You can view all the charges from the invoice document in this tab. Based on the type of the charge, you can view one of the following additional information for each charge description:

  - Unplanned Charge

    Displayed when the charge line is an unplanned charge.

  - Disputed

    Displayed when a charge line is in dispute.

  - Tax charge

    Displayed when the charge is a tax line.

  - Subsequent

    Displayed when the charge line is a subsequent charge.

- **Dispute**

  You can view all the charges from the dispute document in this tab. Based on the type of the charge, you can view one of the following subtexts for each charge description:

  - Subsequent

    Displayed when the charge line is a subsequent charge.

  - Unplanned

    Displayed when the charge line is an unplanned charge.

  Note that in some scenarios, there may be two additional information, for example, **Subsequent | Disputed**. This indicates that the charge line is both subsequent and disputed.

Each subtab displays the following information:

- **Charge Description**

  Displays the charge type details for each stage in each freight document. Charge types are the classification of charges for which the carrier charges you.

  If there are any subsequent charges added by the carrier for a charge type which has already been invoiced, you can view the subtext **Subsequent Charge** in this field.

- **Charge Type (Transportation System)**

  Displays the charge type code used in the external transportation system.

- **Status**

Displays the status of each charge line. The system displays the following statuses:

- Disputed by carrier
- Disputed by ordering party
- Accepted by carrier
- Accepted by ordering party
- Rejected by ordering party
- Rejection accepted by carrier

- **Rate Amount/Unit**

  Displays the flat rate amount or rate amount per unit. You can modify the flat rate amount or rate amount per unit, for example, USD 20 per 1 kg.

- **Quantity**

  Displays the total quantity relevant for calculating the final amount.

- **Final Amount**

  Displays the final amount.

  In the subsequent invoice scenario, you can view a subtext **Invoiced Amount** which displays the already invoiced amount for this charge type.

- **Dispute Reason**

  For disputed charge lines, this column displays one of the following reasons for the dispute as specified by the carrier:

Dispute Reason	Reason Code
Other – Specify	000
Unplanned Cost	001
Rate Mismatch – Unplanned Rate Change by Carrier	002
Rate Mismatch – Based on Quantity Lookup	003
Rate Mismatch – Rate Not Yet Updated in Shipper TM Rate Master	004
Rate Mismatch	005
Distance Correction	006
Weight Correction	007
Volume Correction	008
Quantity Correction	009
Rate Mismatch and Quantity Correction	010
Rate Mismatch and Distance Correction	011
Rate Mismatch and Weight Correction	012
Rate Mismatch and Volume Correction	013

Dispute Reason	Reason Code
Dependent Line	014

When you select a charge line, you can view the following additional details specific for the selected charge line.

Note that you can toggle the display between all charge lines and only disputed charge lines.

You can accept, reject, or propose changes for each charge line disputed by the carrier. Note that when you reject a carrier's proposal, you must enter a rejection reason for the same.

Notes

You can enter information about the dispute in this section. The carrier can view the information you enter in this section.

You can also view the information entered by the carrier in the carrier's **Manage Invoices** app as well as the carrier's **Manage Disputes** app in this section.

Any notes that have been added by the ordering party or the carrier during the process of dispute resolution are forwarded from the freight collaboration option for SAP Business Network for Logistics to the SAP Transportation Management system, where they can be viewed.

ℹ Note

Notes are intended to provide additional information related to the business document or business process. You're recommended to avoid entering sensitive personal data.

Attachments

You can add attachments in this section. The carrier can view documents you attach in this section.

You can also view the attachments uploaded by the carrier in the carrier's **Manage Invoices** app as well as the carrier's **Manage Disputes** app in this section.

ℹ Note

You can attach documents related to the business document or business process in this section. You're recommended to avoid attaching sensitive personal data.

You can only upload files that fulfil the following criteria:

- Files must be of one of the formats: jpg, gif, png, .pdf, .doc, .docx, .xls, .xlsx
- Image files must be less than 6MB file size
- Document files must be less than 5MB file size
- File name must be less than 150 characters including file extension

Error Logs

When a dispute is resolved, the freight order in your external system is updated with the updated charges. If there are any errors during this process, you can view them in this tab. You can use this error log to view the errors and fix them in your external system and re-submit the dispute document later.

Note that this tab is visible only in documents with the dispute status as **In Error**.

General Details

In this section, you can view the freight document details. The system displays the transportation details (total distance, total duration, vehicle resource), locations involved (including dates and addresses), and administration information.

Reviewing Disputes from Carrier

You can view all the disputes submitted by the carrier in the **Manage Disputes** app.

In the **For Review** worklist, you can view all the disputes from carriers that need your action. When you navigate to a dispute document from this worklist, you can view the details of the dispute.

In the **Charges** tab, you can toggle the display between all charge lines and only disputed charge lines. When you select a charge line, you can view the following additional details specific for the selected charge line.

For each disputed charge line, you can choose to accept the carrier's proposal, propose a change, or reject the carrier's proposal. Note that when you reject a carrier's proposal, you must enter a rejection reason for the same.

Once you act on all the disputed charge lines, you can choose to save your changes and submit the disputes later or submit the dispute directly.

You can enable multiple levels of dispute approval process within your organization before sending the dispute back to the carrier. For more information, see Internal Approval Workflow.

When a dispute is created or updated by the carrier and sent to you for review, a tolerance check is applied based on the tolerance settings that you have specified in the General Settings app. You can enable tolerance for the entire document amount or the individual charge item amount. For more information on tolerance checks, see Applying Tolerance Check.

When you take action on the dispute document and submit your changes to the carrier, the system changes the status of the dispute document as **Submitted** and moves it to the **Reviewed** worklist.

When both you and the carrier have converged on an agreement and resolved the differences, the system changes the status of the dispute document as **Resolved** and moves it to the **Resolved** worklist.

The system displays the following document statuses in the header area based on the action performed by you or the carrier:

- For review

  This status appears when the carrier has submitted a dispute document to you for your review.

- Reviewed

  This status appears when you have taken an action on the disputes raised by the carrier and submit the document to the carrier for approval.

- Resolved

  This status appears when both you and the carrier have converged on an agreement and resolved the differences.

- For approval

  This status appears when the dispute is submitted internally in your organization for approval.

- Rejected

  This status appears when the approver rejects a dispute document.

Based on the action performed by you or the carrier, the system displays the following statuses:

- Disputed by carrier

  This status appears when a carrier has proposed a change in an existing charge line.

- Disputed by ordering party

  This status appears when you propose a change on a charge line disputed by the carrier and submit the dispute to the carrier.

- Accepted by carrier

  This status appears when the carrier accepts your change proposal and submits the dispute back to you. When the carrier accepts all the proposals, then the document is set to status **Resolved** in the carrier tenant. The system also sets this status in your system.

- Accepted by ordering party

  This status appears when you accept the dispute proposed by the carrier and submit the dispute to the carrier. When you accept all the disputed lines proposed by the carrier, then the dispute document is set to status **Resolved**. The system also updates the dispute document accordingly in the carrier tenant.

- Rejected by ordering party

  This status appears when you reject the carrier's proposal and submits the dispute back to the carrier. Note that when you reject the carrier's proposal, the carrier can either accept the rejection or propose another change. When the carrier accepts the rejection, the system changes the status of the charge line as **Accepted by carrier**. When the carrier proposes another change, the system changes the status as **Disputed by carrier**.

- Rejection accepted by carrier

  This status appears when you reject the carrier's proposal and the carrier accepts your rejection.

- For approval

  Displays this status when the dispute is submitted internally in your organization for approval by approver groups that you specified in the **General Settings** app.

- Rejected

  Displays this status when the dispute is rejected internally by the approver in the approver group.

Mass Accept and Reject of Disputes

Instead of accepting or rejecting each dispute individually, you can select multiple disputes at once and either accept or reject. On the worklist page, you can select multiple disputes in the **For Review** tab and choose **Accept and Submit** to accept the disputes or **Reject and Submit** to reject the disputes. The system does a mass accept or reject of disputes based on your selection and sends them to the carrier.

Note that when you reject multiple disputes, you must either select a rejection reason from the dropdown menu or enter a rejection note.

ℹ Note

The mass accept or reject of disputes from the worklist does not work in the following scenarios:

- When you select more than 10 disputes at once and accept from the disputes worklist.
- When you select a carrier invoicing dispute document.

  The system only accepts self-billing dispute documents. You must manually view and accept each of the carrier invoicing document.

- When a dispute document is inconsistent.

  You must mark the document as consistent if you want to accept it from the worklist page.

- When you update or reject a charge line in a dispute document.

  The system only accepts the disputes with accepted charge lines or charge lines with no changes.

Internal Approval Process

SAP Business Network for Logistics enables you to have a multi-step dispute approval process within your organization before submitting the dispute to the carrier.

A dispute document can either be approved in a single step by a basic user at the first level or sent to supervisors or managers at the next levels for review based on the settings that you specify. The additional approval steps are enabled only when the disputed amount exceeds the threshold amount or percentage specified the settings.

Based on the range of the disputed amount, you can define multiple approver groups for various dispute amount ranges to approve the dispute.

You can specify the approval conditions in the **General Settings** app.

When a carrier sends a dispute document for review to you, any user from your organization that has the required roles and scope can edit and submit the document.

If the disputed amount is greater than the threshold amount or threshold percentage, the dispute is sent to the users from the appropriate approval group. You define the approver groups and the users in an approver group in the **General Settings** app.

When a higher approver is working on the dispute document, the document does not go for any further approval processes.

The system sends an email notification to all the email addresses specified in the appropriate user group.

Approvers can perform one of the following actions:

Approve

When the supervisor or manager selects the approve icon in the dispute document, all the changes proposed by the first-level user are accepted. The dispute is submitted to the carrier or your transportation management system if all the charges are resolved.

Edit

The supervisor or manager can edit the changes proposed by the first-level user and submit the document. For the disputed charge lines, the user can either accept, edit, or reject the charges. Once the document is submitted, the system checks if the amount proposed by the supervisor is within the threshold of the current approver group. If the amount exceeds the threshold of the current approver group, the system then sends the document to the next level approver group that you have specified in the **General Settings** app. If it does not exceed, the system submits the dispute document to the carrier.

Reject

When the supervisor or manager selects the reject button in the dispute document, the status of the document becomes rejected. For the disputed charge lines, the user can either accept, edit, or reject the charges. The system prompts you ro specify a rejection note that is submitted to internal users in your organization. Any user can view the changes and modify the dispute document again and continue the process.

When the user submits the document, if the amount exceeds the threshold of the current approver group, the system then sends the document to the next level approver group that you have specified in the **General Settings** app. If it does not exceed, the system

submits the dispute document to the carrier.

Internal Note

The system prompts you to specify an internal note when you submit a dispute document. This note is only available to the internal users and not sent to the carriers.

Example 1

Let us consider that you have specified the following settings in the **General Settings** app:

Approver Group	Currency	Purchasing Group	Threshold Amount	Email Address
L1	EUR	ORG1	250	john@example.com julie@example.com
L2	EUR	ORG1	500	denise@example.com richard@example.com

In the above scenario, the following users get the following permissions when the disputed amount is as follows:

- Between 250 EUR to 499 EUR

  Users in the L1 approver group can view the document in the **For Approval** tab in their worklist. They can view, edit, approve, or reject the changes, while all other users can view the document. Users in L1 approver group as specified in **General Settings** app, receive an email notification.

  Note that the users in L2 approver group as well can view, edit, approve, or reject the changes. However, the document does not appear in the **For Approval** tab in their worklist and they do not receive any email notification.

- Greater than or equal to 500 EUR

  Users in the L2 approver group can view, edit, approve, or reject the changes, while all other users can view the document.

Example 2

Let us consider that you have specified the following settings in the **General Settings** app:

Approver Group	Currency	Purchasing Group	Threshold Amount	Email Address
L1	EUR	ORG1	10%	john@example.com julie@example.com
L2	EUR	ORG1	50%	denise@example.com richard@example.com

Formula to calculate the threshold value from a threshold percentage:

Threshold amount = Freight order amount + Threshold percentage value of freight order amount

If the freight order amount is 100 EUR, then the calculation is as follows:

L1 threshold amount = 100 + 10% of 100 = 110 EUR

L2 threshold amount = 100 + 50% of 100 = 150 EUR

In the above scenario, the following users get the following permissions when the disputed amount is as follows:

- Between 110 EUR to 149 EUR

  Users in the L1 approver group can view the document in the **For Approval** tab in their worklist. They can view, edit, approve, or reject the changes, while all other users can view the document. Users in L1 approver group as specified in **General Settings** app, receive an email notification.

  Note that the users in L2 approver group as well can view, edit, approve, or reject the changes. However, the document does not appear in the **For Approval** tab in their worklist and they do not receive any email notification.

- Greater than or equal to 150 EUR

  Users in the L2 approver group can view, edit, approve, or reject the changes, while all other users can view the document.

Acknowledgement Message After Dispute Resolution

A dispute is resolved when the shipper or the carrier accepts all charges proposed by the other party. For example, the carrier proposes charges and the shipper accepts these charges. When the party that has the document accepts all the charges, then the system updates these charges in the freight document in the shipper's SAP Transportation Management (SAP TM) system and the dispute status is updated as **Submitted for confirmation**.

When the resolved charges that have been agreed upon by the shipper and the carrier in the freight collaboration option for SAP Business Network for Logistics are updated in the shipper's SAP TM system, the system displays an acknowledgment message that the charges have been updated. If the charges are not updated, the system displays a failure message.

- Success message

  When a successful acknowledgment message is received in the freight collaboration option, the status of the shipper's dispute is set to **Resolved**. Then, the carrier dispute is set to **Resolved**, after which the carrier invoice status is updated to **Submitted** (for an invoicing dispute) and the carrier invoice is submitted to the SAP TM system.

  When the system receives an acknowledgment message from the SAP TM system, it sets the dispute status changed as **Resolved**.

- Failure message

  If the SAP TM freight document update fails, `TransportationOrderChargeElementRequest_In` will fail with errors, and the acknowledgment message (`TransportationOrderChargeElementConfirmation_Out`) will not be triggered. The shipper must process this error in Forward Error Handling (FEH), which has already been registered and implemented on the inbound side for `TransportationOrderChargeElementRequest_In`. FEH is configured to perform error handling. Therefore, the error message is forwarded to FEH post-processing, which the shipper can access by choosing the red flag. You user launches the transaction `sxi_monitor` in the shipper's system and provides the interface name as `TransportationOrderChargeElementRequest_In`.

- Error message

  If `TransportationOrderChargeElementConfirmation_Out` message contains any error, it will set the dispute status as **In Error**. The error must be addressed in the SAP TM system and the dispute can be re-triggered. This will resend the `TransportationOrderChargeElementRequest_In` message to update the charges again.

Dispute Inconsistencies During Freight Document Updates

Updates in self-billed freight documents are reflected in the dispute document in the carrier's system and are marked as inconsistent.

When a carrier, creates a dispute on a self-billed freight document and the ordering party also makes changes to the self-billed freight document in their SAP Transportation Management system, the system notifies the carrier that the carrier is disputing on a document

that has recently been changed. The system displays the following message to the carrier: **Some of the charges have inconsistent values due to changes in the freight document**. Also, the system highlights the relevant lines and indicates as **Inconsistent (Updated)** or **Inconsistent (Deleted)**. The carrier can accept the new charges or create a new dispute with the new frame of reference.

ℹ Note

The system does this only for disputes on self-billed freight documents. Also, the system does this only for disputes that are managed by the ordering party in their SAP Business Network for Logistics system and not in their external transportation system.

When the carrier chooses **Merge charges**, the line that was previously marked as being **Inconsistent (Updated)** or **Inconsistent (Deleted)** is no longer in dispute and the system no longer highlights the line.

If other lines are in dispute, the system continues this process.

However, if there are no other disputed lines and if the carrier submits the document, the dispute status changes to **Submitted for confirmation**.

If the document is with the ordering party, the disputed line is highlighted and marked as **Inconsistent (Updated)** or **Inconsistent (Deleted)**. The document is editable in the ordering party's system but not in the carrier's system. If there are disputed lines that are inconsistent, the system displays the following message to the ordering party: **Some of the charges have inconsistent values due to changes in the freight document**. When the ordering party accepts the charges, the line that was previously marked as being **Inconsistent (Updated)** or **Inconsistent (Deleted)** is no longer in dispute, and the system no longer highlights the line.

If other lines are in dispute, the system continues this process.

However, if there are no other disputed lines and if the document is submitted by the ordering party, the dispute status changes to **To be reviewed** and is sent to the carrier for approval. The carrier can view the updated charges.

Applying Instance-Based Authorization

You can apply instance-based authorization in the **Manage Disputes** app to segregate dispute documents based on the purchasing organization.

In other terms, you can assign purchasing organizations to a user ID. When you do so, the user can view only those dispute documents that belong to the purchasing organizations assigned to a specific user ID. As the purchasing organization has a business partner representation as the ordering party, you must assign the users to the ordering party instead of a purchasing organization.

To enable instance-based authorization, proceed as follows:

1. Create a role using the `AttributedOrderingPartyTemplate` role template

   You can find this role template under the lbn-live!t1590 application identifier.

2. For the newly-created role, set the `party_id` attribute in `AttributedOrderingPartyTemplate` to `<Business Partner ID>` of your purchasing organization, for example `LBNPO01`.

   You can find the business partner ID of your purchasing organization in you SAP Transportation Management system.

3. Add this role to the role collection that has been assigned to you.

   For more information on maintaining role collections, see **Administration Guide for Shippers** on SAP Help Portal at http://help.sap.com/lbn.

Result

Shippers who have the `AttributedOrderingPartyTemplate` role template assigned can only view the purchasing organization data that matches the `party_id` attribute set in `AttributedOrderingPartyTemplate`.

ℹ Note

If you do not have the `AttributedOrderingPartyTemplate` role template assigned, you can access the data of all purchasing organizations.

Manage Integration Logs

The **Manage Integration Logs** app allows you to monitor the inbound and outbound messages that are processed from SAP Business Network for Logistics. You can view the integration logs using this app.

This can be integration logs between SAP Business Network for Logistics and SAP S/4HANA or any other backend SAP system (such as SAP Transportation Management) or any API or EDI system of carriers, network partners, network participants, or similar. Since SAP Business Network for Logistics follows a single integration system design for all customers and other partners, the **Manage Integration Logs** app aims to provide a visibility into integration logs for a particular customer or partner. Only the technical parties involved in an integration log can view the same in the app, ensuring data separation across all customers. The app also provides access to customer-facing payloads and enables the reprocessing of failed integration logs. The app provides standard SAP Business Network for Logistics integration logs only.

ℹ Note

To use these apps, you must add one or several roles to your role collection. The required role templates and application identifiers are described in the Available Roles for Shippers section and the Available Roles for Carriers section of the Administration Guide for Shippers.

For instructions on how to use the app, open the in-app help by selecting ⓘ.

Shippers and solution owners can use the following features:

- You can search based on document ID and date/time.
- You can use separate tabs for **Logs** and **Documents**:
    - In the **Logs** tab, there are two predefined filters: **All** (includes all messages in all statuses) and **Failed** (includes messages in status **Failed** or **Escalated**). Individual messages sent to or from SAP Business Network for Logistics are listed here.
    - The **Documents** tab provides an aggregated view based on predefined scenarios. Each scenario is a collection of document types based on SAP Business Network for Logistics apps. For more information about available scenarios, see Scenarios.
    - For each scenario, the **Manage Integration Logs** app provides an overall status. The status in the **Documents** tab is the status of the latest integration log within the aggregated scenario.
- You can reprocess escalated messages from either of the tabs.
- You can sort and filter on column level.
- You can download the table content to a Microsoft Excel file.
- You can view the payloads and error logs within the app.
- You can download the payloads.

Carriers and data contributors can only view the **Logs** tab.
