- (Optional) **Contact Information**: Contact information related to the location.
- (Optional) **Additional Information**: Additional information about the location. For more detail, see Define Additional Information.

3. Choose **Save**.

Result

The newly-created location master data can be consumed by other apps in SAP Business Network Freight Collaboration. For example, when defining the settings for a docking location in Docking Location Settings, you must associate the docking location with a location created in Manage Locations.

Upload Locations

You can fill the details of locations using an Excel template and then upload this template back to the app. To do this, follow these steps:

1. Choose **Upload** to open the **Upload Locations** page.
2. Click **Upload** on the up-right corner, then download the Excel template available by choosing **Download Excel Template**.
3. Fill the details of the locations you want to upload in the template.
4. In **Choose File**, locate the modified Excel template and then choose **Upload**.

ℹ Note

You can enter the geographical coordinates for the location records in the **Longitude** and **Latitude** columns manually. If you want the system to verify your entries, set **Calibrate coordinates when saving** to **Yes** before you upload your file.

By default, **Calibrate coordinates when saving** is set to **Apply global settings**, meaning that how the system handles coordinates for the location records you are uploading is determined by the option you choose in the **Generate geo-coordinates automatically** setting, which can be found in the **Settings** dialogue box. If you leave **Generate geo-coordinates automatically** with the default option, the system generates geo-coordinates for locations when both the latitude and longitude coordinates are missing. For more information, see Global settings for Geo-Coordinates.

Editing a Location

To edit a location, proceed as follows:

1. Use the following fields to filter locations:
   - Location ID
   - Description
   - Location Type
   - Country/Region
   - City
2. Click the location from the filter results to open the details page.
3. Choose **Edit** on the upper-right corner of the details page.

Viewing a Location

To view a location, proceed as follows:

1. By default, you can use the following fields to filter locations:
    - External ID
    - Source System
    - Object Type
    - Description
    - Country/Region
    - City
    - Data Processing Status
    - Additional Information

    You can also adjust the filter bar by chooosing **Adapt Filters**.
2. Click the location from the filter results to open the details page.

The detail view of the location consists of a header and other sections.

Header

The Header section displays the address information.

General

This section displays the basic information of a location. This includes the business purposes, the longitude/latitude coordinates, and the revision history.

Geographical Coordinates and Map

This section displays the geographical coordinates of the location. It also identifies the location on the map.

Alternative Location IDs

This section displays a list of type-specific alternative IDs of the location.

Contact Information

This section displays the contact information related to the location.

Additional Information

This section displays the contact information related to the location.

More Information

You can do the following with the filter bar:

- Specify filters to narrow down the worklists and search for locations.
- Add or remove the filters displayed on the filter bar by choosing **Adapt Filters**.
- Save the current filter settings as a view and apply it later.

  After you specified filters (and pressed Enter) and/or adapted filter display, the current view name shown in the upper-left corner displays a * sign, indicating the view has been changed. Save the view by either of the following:

  - Click the view name to open the **My Views** box and choose **Save** or **Save As**.
  - In the **Adapt Filters** dialog box, choose **Save**.

  Next time when you want to apply the view, just select the view name in the **My Views** box.

> **Note**
>
> The default **Standard** view cannot be changed.

Define Additional Information

The Additional Information section contains a list of additional information associated to a location record. This section enables you to define necessary custom characteristics or references by adding your information items.

An information item comprises a name, the type of the item, and the corresponding value.

- **Type**: Type of the additional information item. It can be either **Text** or **Alternative ID**.
- **Name**: Name of the additional information item. If you set **Type** to **Alternative ID**, the name of the item must be set to one of the following values:
  - GLN
  - DUNS
  - UN/LOCODE
  - IATA Airport Code
- **Value**: Value that corresponds to this additional information item.

Manage Custom Codes

You can use the manage custom codes feature to extend the drop-down list for the following fields:

- Country/Region
- State
- Location Type
- Time Zone
- Role of Contact

This feature is useful if the drop-down list of a field does not contain the code you want to select. For example, you do not find the region code you need in the drop-down list of **Country/Region**.

To create a custom code, proceed as follows:

1. Choose the **Manage Custom Codes** button.
2. On the **Manage Custom Codes** page, select the field for which you want to extend the list, and then choose **Create**.
3. Specify the name, language, and description of the code, and then choose **Save**.

Results

After you create a custom code, you can find it from the **Custom** category when you expand the corresponding drop-down list. If needed, you can also remove it or edit its description on the **Manage Custom Codes** page.

Global settings for Geo-Coordinates

You can use **Generate geo-coordinates automatically** in the **Settings** dialogue box to define how the system handles geo-coordinates for all location records. In **Generate geo-coordinates automatically**, you have the following options:

- **Off** (Default): Do not generate geo-coordinates automatically even if they are missing.
- **Generate**: Generate geo-coordinates for locations when both the latitude and longitude coordinates are missing. (Applies to all locations including the existing ones)
- **Overwrite**: Generate geo-coordinates for locations when coordinates are missing or overwrite them if they already exist. (Applies to locations created after you enable this option)

ℹ Note

- Options in **Generate geo-coordinates automatically** only take effect for location records where you leave **Calibrate coordinates when saving** with the default option **Apply global settings**.
- The **Calibrate coordinates when saving** setting in location records takes precedence over **Generate geo-coordinates automatically** in the **Settings** dialogue box. For example, when you set **Calibrate coordinates when saving** to **No** in a location record, the system does not generate or calibrate coordinates for the record even if **Generate geo-coordinates** automatically is set to **Generate** or **Overwrite**.

Enable Risk Monitoring

If you have configured the risk monitoring service provider in Configure Partner Connections, you can determine whether or not to use the service provider to monitor risks at a certain location in Manage Locations.

ℹ Note

Risk information is not displayed in Manage Locations. Instead, it's displayed on the map view of the Logistics Execution Insights app. You use Manage Locations to specify a group of target locations where you want to monitor risks.

Prerequisites

You have configured the risk monitoring service provider in Configure Partner Connections.

Procedure

To enable risk monitoring for a specific location, follow these steps:

1. Click the location record for which you want to monitor risks to open its details page.
2. Choose **Edit** on the upper-right corner.
3. Click to select the **Enable supply chain risk monitoring** checkbox and then choose **Save**.

ℹ Note

You can also configure this setting when creating a new location record.

Alternatively, you can enable risk monitoring for multiple locations at once. To do this, select the location records, and then choose **Risk Monitoring** > **Enable**.

Results

The risk monitoring service provider starts monitoring risks at the location. If you've subscribed for the intelligent insights add-on, you can view the risk information on each target location in the Logistics Execution Insights app.

To notify the service provider to stop monitoring risks at a location, uncheck the **Enable supply chain risk monitoring** checkbox in the corresponding location record.

To stop using the risk monitoring feature for all locations in your supply chain, uncheck the **Enable supply chain risk monitoring** checkbox in each location record where you previously enabled the feature in Manage Locations and then deactivate the risk monitoring service provider in Configure Partner Connections.

Creating a Location

Self-Book Dock Appointments

You, as a carrier, can use this app to book a dock appointment for a freight order when the corresponding vehicle is about to reach a certain stop for loading or unloading. The appointments you booked will then be visualized in the **Manage Dock Appointments** app. This helps shippers have a precise estimate on the quantity of upcoming dock appointments.

Process

When you confirm a freight order in the **Freight Orders for Confirmation** app, the system updates the **Self-Book Dock Appointments** app with this freight order, so that you can create an appointment for this freight order. Note that to perform this, the ordering party must have enabled the relevant settings.

Alternatively, the ordering party can enable you to update the **Self-Book Dock Appointments** app with a freight order that has not yet been confirmed. In other words, once the ordering party sends the freight order from SAP Transportation Management system, the freight order is updated in the **Freight Orders for Confirmation** app, with the status as **New**. Before you confirm this order, the

system lists this freight order in the **Ready for Booking** table in the **Self-Book Dock Appointments** app. You can select and create an appointment for this order.

Note that the system allows you to cancel only those appointments for which the associated gate logbooks are in the status **Ready for Check-In** or **Cancelled**.

ℹ Note

For more information, you can watch the following video: How to Self-Book Dock Appointments (English only).

Worklist (Self-Book Dock Appointments)

The **Self-Book Dock Appointments** app consists of the **Ready for Booking** tab and the **Booked Appointment** tab.

Ready for Booking

The **Ready for Booking** tab consists of all freight documents that are ready for maintaining an appointment. You can view the following information on this tab:

- **Location**
- **Loading Point**
- **Ordering Party / Reference Document**
- **License Plate**
- **Activity Type**

  Displays whether you can perform loading, unloading, or both activities.
- **Arrival Date and Time**
- **Departure Date and Time**
- **Appointment Status**

  Displays whether the document has a canceled appointment or the appointment is yet to be booked
- **Means of Transport**
- **Booking Cut-Off**

  Displays the cut-off date and time for booking an appointment
- **Location ID**
- **Freight Order**
- **Reference Documents**

Booked Appointment

The **Booked Appointment** tab consists of all freight documents with an appointment. You can view the following information on this tab:

- **Loading Point**

- Ordering Party / Appointment
- License Plate
- Freight Order ID
- Reference Documents
- Appointment Start Date and Time
- Appointment End Date and Time
- Gate ID
- Gate Location
- Planned Check-In Date and Time

  Displays the planned date and time of vehicle check-in
- Docking Location
- Group ID

  Displays the group ID if the document is part of a grouped appointment

You can use the following features to filter the freight documents for appointment:

Status

In the Ready for Booking tab, you can filter the freight documents for appointment based on the one of the following statuses:

- All
- Not Booked
- Canceled

Search

You can search for a specific document for appointment using the search field.

View History

When you enable this toggle, the system also displays the appointments that are in the past.

Personalization

You can choose the personalization icon to manage your settings. You can perform the following:

- Columns

  You can add or remove columns that are displayed on the table.
- Sort

  You can do an ascending or descending sort of a column in the table.
- Filter

  You can filter the documents for appointment based on the loading type values.

- **Group**

  You can group the documents for appointment based on one or more of the attributes specified in the input help.

Export to Spreadsheet

You can choose the export to spreadsheet button to download the dock appointments in Microsoft Excel format. This feature is available in both **Ready for Booking** and **Booked Appointment** tab.

Maintaining a Dock Appointment

Context

The **Ready for Booking** table lists documents for which you can maintain an appointment. These include:

- Documents that have a stop matching of one of active loading points but do not have an appointment booked
- Documents whose appointment has been canceled

To maintain a dock appointment, select an eligible document from the list, and then choose **Maintain Appointment** to proceed with the appointment creation process.

You cannot update appointments in the past.

For more details, proceed as follows:

Procedure

1. Select the document from the **Ready for Booking** table, and then choose **Maintain Appointment**. You can also click the document to view its details page. Additionally, booking cut-off times that are less than 24 hours away are highlighted in orange. This helps you better prioritize your appointment booking.
2. On the **Maintain Appointment** page, specify the **Loading Point** and **Date** fields (only loading points with the matching activity type will be available). The system displays a list of available time slots and the slots preferred by your shipper (acceptable and requested ones).

   If the shipper does not allow carriers to change the appointment date, you are not able to edit the **Date** field.

   Note that the system displays **DST STARTS** when the day light savings time begins and **DST ENDS** when the day light savings time ends.
3. Depending on the duration of the loading or unloading activity, choose one or more consecutive time slots from the **Time Slot** list.

   Note that if the shipper has disabled the time slot option for a loading point, you may not be able to view the time slots for the appointments at this loading point. In such scenarios, you can maintain the appointment without selecting a time slot.

   The shipper can restrict the maximum duration of consecutive time slots. This ensures that the sum of bookable time slots cannot exceed the total duration of all adjacent time slots. However, you can always book at least one time slot.

   For more information, see the following blog: SAP Business Network for Logistics - Dock Appointment Scheduling: Max. Consecutive Timeslot Duration.

   If your shipper uses the **Derived Appointment Duration** feature, the following applies: When you book an appointment, the booked time slots must match the calculated duration from the shipper. If an exact match is not possible, you must ensure that the booked time is not exceeded by more than one time slot. Example: If the derived appointment duration is set to 27 minutes, and a single time slot has 15 minutes, you must select two consecutive time slots of 15 minutes.

For more information, see the following blog: SAP Business Network for Logistics - Dock Appointment Scheduling: Use Derived Appointment Duration.

4. On the **Information** tab, enter the following under **Driver Details**:
    - **Driver Name**
    - **Driver Phone Number**
    - **Additional Driver Name**
    - **Additional Driver Phone Number**

    You can also click the **Ordering Party** link to open the quick view page. Hyperlinks on the quick view page enable you to perform various operations. For example, you can click **Email** to launch an email program.

5. On the **Information** tab, enter the following under **Resource Details**:
    - **License Plate / Country or Region of Registration** (of the truck)
    - **Truck ID**
    - **Trailer ID**

6. If there is any additional information about the appointment, enter it in the **Notes** section.

    Notes are intended to provide additional information related to the business document or business process. We recommend you to avoid entering sensitive personal data.

7. If there are any attachments that you want to add to the appointment, choose the **Add** button under the **Attachments** section.

    You can only upload files that meet the following criteria:
    - Files of the formats: jpg, jpeg, gif, png, pdf, doc, docx, xls, xlsx, tiff, tiff-fx
    - Image files less than 6MB file size
    - Document files less than 5MB file size
    - File name less than 150 characters including file extension

8. Choose **Maintain**.

Results

A dock appointment has been maintained for the document. You can find this appointment on the **Booked Appointments** table. From there, you can access the appointment and view the details.

After you maintain a dock appointment, shippers can view your appointment using the **Manage Dock Appointments** app.

Maintaining a Grouped Appointment

When you select a docking location in the calendar view, you can select two or more documents from the **Ready for Booking** tab and maintain multiple appointments in a single group with the same time slot.

Note that the system enables you to create a grouped appointment only when the following attributes of the selected documents are same:

- **Location**
- **Loading Point** (only loading points with the matching activity type will be available)

- **Activity Type**
- **Transport Means Description**
- **Transport Means Type**
- **Arrival Date and Time**
- **Departure Date and Time**

To maintain multiple appointments in a single group, proceed as follows:

1. Select two or more documents with the similar attributes from the **Ready for Booking** tab and choose **Maintain Appointment**.

   Note that as of now, you can only select up to 20 documents to create a grouped appointment.

2. You can view multiple appointments that are created under the **Grouped Appointments** tab. You can perform the following:

   - You can add or remove documents here. When you choose **Add**, the system displays the list of documents that contain similar attributes. You can select the documents and choose **Add to Group**.
   - You can choose the appointment ID to switch to a different appointment that is not the current appointment.
   - You can choose the freight order under the **Freight Order** column to navigate to the freight order in SAP Business Network for Logistics.

3. On the **Scheduling** tab, specify the **Loading Point** and **Date** (only loading points with the matching activity type will be available).

   Note that if the shipper has disabled the option to change the appointment date for carriers, you may not be able to edit the **Date** field.

4. Depending on the duration of the loading or unloading activity, choose one or more consecutive time slots from the **Time Slot** list.

   Note that if the shipper has disabled the time slot option for a loading point, you may not be able to view the time slots for the appointments at this loading point. In such scenarios, you can maintain the appointment without selecting a time slot.

   The shipper can restrict the maximum duration of consecutive time slots. This ensures that the sum of bookable time slots cannot exceed the total duration of all adjacent time slots. However, you can always book at least one time slot.

   For more information, see the following blog: SAP Business Network for Logistics - Dock Appointment Scheduling: Max. Consecutive Timeslot Duration.

   If your shipper uses the **Derived Appointment Duration** feature, the following applies: When you book an appointment, the booked time slots must match the calculated duration from the shipper. If an exact match is not possible, you must ensure that the booked time is not exceeded by more than one time slot. Example: If the derived appointment duration is set to 27 minutes, and a single time slot has 15 minutes, you must select two consecutive time slots of 15 minutes.

   For more information, see the following blog: SAP Business Network for Logistics - Dock Appointment Scheduling: Use Derived Appointment Duration.

5. On the **Information** tab, enter the following under **Driver Details**:

   - **Driver Name**
   - **Driver Phone Number**
   - **Additional Driver Name**
   - **Additional Driver Phone Number**
