6. On the **Information** tab, enter the following under **Resource Details**:
    - **License Plate / Country or Region of Registration** (of the truck)
    - **Truck ID**
    - **Trailer ID**
7. Choose **Maintain**.

Results

A grouped appointment has been maintained for documents. You can find this appointment on the **Booked Appointments** table. From there, you can access the appointment and view the details. You can also edit or cancel the appointment from there. When you edit or cancel, you can choose whether you want to edit or cancel only the current appointment or all the appointments in the group.

After you maintain a dock appointment, shippers can view your appointment using the **Manage Dock Appointments** app.

ℹ Note

Once you maintain the grouped appointment, you can edit the grouped appointment and add notes and attachments. Note that when you do so, the notes and attachments are added only to the current appointment and not all the appointments in the group.

Viewing an Appointment

You can access the list of maintained appointments in the **Booked Appointment** tab. When you select an appointment, the system displays the appointment details. The detail view of an appointment consists of a header and several sections.

Header

The system displays the following information in this section:

- **Location**

  Note that when you choose the location, the system displays the additional details of the location that is assigned to the docking location, such as time zone, address, and remarks.
- **Loading Point**
- **Appointment Start Date and Time**
- **Appointment End Date and Time**

Information

The system displays the following information under this section:

- **General**

  You can view the **Ordering Party**, **Activity Type**, **Dangerous Goods**, **Incoterm**, and **Incoterm Location**.

  Note that when you choose the ordering party, the system displays the additional details of the ordering party.
- **Booking Details**

You can view the **Loading Point**, **Remarks**, and **Business Hours** of the loading point.

- **Active Vehicle Resource**

  You can view the active vehicle resource details such as **Transport Means Type**, **Vehicle Category Code**, **Vehicle Type Code**, and **Vehicle Resource ID**.

- **Driver Details**

  You can view the driver details such as **Driver Name**, **Additional Driver Name**, and **Driver Phone Number**.

- **Resource Details**

  You can view the **License Plate / Country or Region of Registration** (of the truck), **Truck ID** and **Trailer ID**.

- **Admin Data**

  You can view the **Created By**, **Changed By**, **Created On**, and **Changed On** details.

- **Guest User**

  You can view the guest user details such as **Name**, **Company Name**, and **Email ID**.

Reference Documents

You can view the reference document details such as reference document ID, stop details, and arrival and departure date and time. When you choose a freight order, the system navigates to the freight order in SAP Business Network for Logistics. The link is only available if the appointment was created based on a freight order that exists in SAP Business Network for Logistics.

Stops

Displays the visual representation of the freight order execution flow with the source location, intermediate stop locations, and destination location. You can see the appointment ID created in SAP Business Network for Logistics, the expected dates for departure and arrival, and the activity type performed for the appointment, such as loading or unloading.

When you choose a stop, the system displays the following stop details in a dialog box:

- **Arrival Date and Time**

  Displays the expected arrival date and time defined in the corresponding freight order.

- **Departure Date and Time**

  Displays the expected departure date and time defined in the corresponding freight order.

- **Requested Start Date and Time**

  Displays the requested start date and time defined in the corresponding freight order.

- **Acceptable Start Date and Time**

  Displays the acceptable start date and time defined in the corresponding freight order.

- **Requested End Date and Time**

  Displays the requested end date and time defined in the corresponding freight order.

- **Acceptable End Date and Time**

  Displays the acceptable end date and time defined in the corresponding freight order.

The following **Appointment Details** are displayed for all appointments created in SAP Business Network for Logistics but not for the currently displayed appointment and not for external appointments:

- **Appointment ID**

  Displays the appointment ID if the appointment was created by SAP Business Network for Logistics. You can use this ID to search for the appointment in its corresponding docking location in the **Manage Dock Appointments** app.

- **Appointment Start Date and Time**

  Displays the start date and time of the appointment after it was booked.

- **Appointment End Date and Time**

  Displays the end date and time of the appointment after it was booked.

Cargo

You can view the following cargo details:

- **Cargo Item**

  Displays the description of the cargo item.

- **Type**

  Displays whether the cargo item is a package, product, or a container.

- **Logistical Details**

  Displays the quantity, gross weight, gross volume, and dimensions.

- **Equipment Details**

  Displays the equipment type and equipment group.

- **Reference Documents**

  Displays the reference document details.

- **Special Requirements**

  Displays the following:

  - **Dangerous Goods**

    If the ordering party has provided dangerous goods information, you can view this information from the **Cargo** section by choosing **Yes** in the **Dangerous Goods** column. This opens a window containing details about the item type, relevant regulations, and more detailed information such as storage instructions, control temperature, and emergency temperature.

  - **Temperature Requirements**

- **Other Details**

  Displays the following:

  - **Over-Dimensional**
  - **Non-Stackable**
  - **High Value**

Notes

You can view the additional information about the appointment that you have added.

Attachments

You can view the attachments that you have added.

You can edit or cancel the appointment by choosing the Edit and Cancel Appointment buttons respectively.

Note that the system allows you to cancel only those appointments for which the associated gate logbooks are in the status **Ready for Check-In** or **Cancelled**.

Enabling Docking Location-Based Access

You can apply location-based authorization in the **Self-Book Dock Appointments** app to control user access to appointments belonging to a specific docking location.

In other terms, you can assign a docking location to a user ID. When you do so, the user can view only those documents for appointment that belong to the docking location ID.

To enable location-based authorization, navigate to the User Management app. Create and assign a user group to control user access to specified docking locations in the **Self-Book Dock Appointments** app. For more information, see Create a User and Assign User Groups.

Maintaining a Dock Appointment (Guest User)

You as a customer or a carrier, who is not on SAP Business Network for Logistics (but your shipper is on the network), may want to pick up a shipment from a shipper's warehouse. You may also want your carrier to do this on your behalf. To do so, you must maintain the dock appointment details in the SAP Business Network Freight Collaboration system.

The shipper can provide a guest user access to you and can enable you to maintain the appointment details in SAP Business Network Freight Collaboration using an API.

Once the shipper provides you a guest user access, the system generates an URL and sends it to you in an email. To validate the authenticity of the accessing personnel, when you navigate to the URL, the system prompts you to enter additional appointment information such as the purchase order number. Once you pass the security validation, you can view the appointment details. You can select the time slots yourself and save the appointment. You can also invite your carrier to access this appointment and select the time slots.

To do so, you must perform the following:

1. Choose the **Add Carrier** button.

   A dialog box appears.

2. Enter the carrier details in this dialog box and proceed.

   The system sends an email to the carrier with the URL for guest user access of the appointment.

The carrier can navigate to the URL, access the appointment details, and select the time slots.

Note that only the URL that you receive as a customer contains the **Add Carrier** button. The URL that the carrier receives does not contain this button.

Freight Orders for Reporting

The **Freight Orders for Reporting** app enables you to keep your ordering parties informed about the transportation of their freight. For example, if one of your delivery trucks is delayed on-route, you can send the ordering party a new ETA (expected time of arrival) so they can replan if necessary. Additionally, the app lets you upload and send documents, such as proof of deliveries, to your ordering parties.

Note that this app has been deprecated and will be sunset shortly. This app has been replaced with the new app **Manage Freight Execution**.

The reporting app contains the track relevant freight orders irrespective of whether the orders are relevant for confirmation or not.

In the **Freight Orders for Reporting** app, you can view the events that you reported manually and the events reported by the visibility provider. The manually reported data and the events reported by the visibility provider are synchronized to the ordering party's **Track Freight Movement** app and SAP Transportation Management (SAP TM) or SAP S/4 HANA system.

ℹ Note

- As of now, in the **Freight Orders for Reporting** app, you can report only arrival and departure events.

  Alternatively, you can keep your ordering parties in the loop during the transportation of their freight by sending them visibility data (including real-time location, estimated ETA, event status, and time of event completion) via a supported visibility provider. For more information about supported visibility providers, visit the SAP Community wiki for SAP Business Network Freight Collaboration, and the homepage for SAP Business Network for Logistics.

- You can report events for a freight order even when you have not reconfirmed a freight order that has been updated by the ordering party. In the worklist, you can view the tag **Updated** for such updated freight orders. Also, a message appears on the worklist when there are freight orders updated by the ordering party and you have not yet confirmed these freight orders. You can use the link in the message to navigate and view the list of freight orders with pending reconfirmation.

The **Freight Orders for Reporting** app consists of a main view and a detail view.

When you open the app, the main view is displayed. It has two screen areas:

- Filter bar

  Using the filter bar in the header, you can filter the freight orders by one or more of the following options:

  - **Freight Order**
  - **Ordering Party**
  - **Reporting Status**

    Displays one of the following statuses:

    - **Ready for Reporting**

      When you confirm a freight order, the system sends this freight order to the **Freight Orders for Reporting** app with this status.

    - **Reporting in Progress**

When you start reporting the events in the freight order then the system sets the status of this freight order as **Reporting in Progress**.

- **Reporting Completed**

  When you have reported all planned events in the freight order, then the system sets the status of this freight order as **Reporting Completed**.

- **Reporting in Progress (freight order reconfirmation required)**

  After you start reporting the events in the freight order, if any changes are done to this freight order, then the system sets this status.

- **Canceled**

  If the freight order is canceled, the system updates the status of this freight order as **Canceled**.

- **Driver Name**
- **License Plate**
- **Delay**
- **Departure Date**
- **Arrival Date**
- **Source Location**
- **Destination Location**
- **Received On**
- **Orders Pending Reconfirmation**
- **Consignee Party Name**
- **Destination Address**
- **Source Address**
- **Vendor ID**
- **Proof of Delivery Status**

  You can select one of the following options:

  - **Reported at Last Stop**

    When you select this filter option, you can view all freight orders for which you have reported the proof of delivery at the last stop.

  - **Not Reported at Last Stop**

    When you select this filter option, you can view all freight orders for which you have not reported the proof of delivery at the last stop.

- Worklists

  You can use the following worklists **Events to Report**, **Skipped Events**, and **All**.

From each worklist, you can click on a freight order to navigate to its detail view. The detail view has two screen areas:

- Header

The header displays information such as the freight order ID, ordering party, and the reporting status of the freight order.

- Sections

  In the **Reporting** section, you can report the planned events in freight order, as well as upload both proof of delivery and proof of pickup documents. You can also display extra details in the **Information**, **Contacts**, **Notes**, and **Drivers and License Plate** sections.

Worklists (Freight Orders for Reporting)

To restrict the number of freight orders that are displayed, you can use the preconfigured worklists (**Events to Report**, **Skipped Events**, **All**).

All

The **All** worklist displays the information available on the **Events to Report** and **Skipped Events** worklists. Additionally, the **All** worklist lists freight orders that you have finished reporting, as well as canceled freight orders. For each freight order, the following information is displayed:

- Ordering party and freight order ID

  You can view the freight order details in the **Freight Orders for Confirmation** app. Note that you can navigate and view only those freight orders that you have confirmed in your **Freight Orders for Confirmation** app.

- Reporting status
- Driver and license plate
- Number of reference documents
- Event type and location of the current event that you must report
- Scenario type
- Planned time of the current event that you must report
- By how long the event is delayed
- Date of arrival
- Date of departure
- Source location
- Destination location
- The number of skipped events within the freight order

Events to Report

The **Events to Report** worklist displays the freight orders – and the events within the freight order – that you must report. For each freight order, the following information is displayed:

- Ordering party and freight order ID

  You can view the freight order details in the **Freight Orders for Confirmation** app. Note that you can navigate and view only those freight orders that you have confirmed in your **Freight Orders for Confirmation** app.

- Reporting status
- Drivers and license plate
- Number of reference documents
- Event type and location of the current event that you must report
- Scenario type
- Planned time of the current event that you must report
- By how long the event is delayed
- Date of arrival
- Date of departure
- Source location
- Destination location

Skipped Events

The **Skipped Events** worklist displays freight orders that include one or more events that you've skipped. This means when you skip an event on the **Events to Report** worklist, you can easily find the freight order later on when you're able to report the skipped event. For each freight order, the following information is displayed:

- Ordering party and freight order ID

  You can view the freight order details in the **Freight Orders for Confirmation** app. Note that you can navigate and view only those freight orders that you have confirmed in your **Freight Orders for Confirmation** app.
- Reporting status
- Drivers and license plate
- Number of reference documents
- Scenario type
- The number of skipped events within the freight order
- Date of arrival
- Date of departure
- Source location
- Destination location

Export to Spreadsheet

You can choose the export to spreadsheet button to download the dock appointments in Microsoft Excel format. This feature is available in both **Ready for Booking** and **Booked Appointment** tab.

Detail View (Freight Orders for Reporting)

The detail view of a freight order consists of a header and several sections.

Header

The header displays information about the freight order.

The following fields may be of interest to you:

- Freight order details

  You can view the freight order details in the **Freight Orders for Confirmation** app. Note that you can navigate and view only those freight orders that you have confirmed in your **Freight Orders for Confirmation** app.

- Reporting status (**Ready for reporting**, **Reporting in progress**, **Reporting in progress (freight order reconfirmation required)**, **Reporting completed**, **Canceled**)

  The status of a freight order changes from **Ready for reporting** to **Reporting in progress** when you report any event (or if you skip an event or mark an event as unable to report). The status changes from **Reporting in progress** to **Reporting completed** only when you have reported the final time (the time of completion) for all events or marked any events that you cannot report to unable to report.

- Contact details of the ordering party

Information

The **Information** section displays general data about the freight order.

Reporting

The **Reporting** section displays all the events in the freight order.

- **Report Final Time**

  You can report a final time for the event

- **Report Delay**

  You can report a delay to the shipper. You can specify the duration of delay, reason for delay, and additional details.

- **Report Proof of Pickup**

  For a departure event, you can report a proof of pickup. Note that you must upload a minimum of one attachment.

- **Report Proof of Delivery**

  For an arrival event, you can report a proof of delivery. Note that you must upload a minimum of one attachment.

- **Report Exception**

  You can report exceptions to the shipper in case of unforeseen events such as damages or other issues. Note that you have an option to upload an attachment.

- **Unable to Report**

  When you are unable to report an event, you can notify the shipper by choosing this option.

Note that you can select any time zone when you report a final time. However, the system converts it to the local time zone of the respective source or destination location while displaying it in the Freight Orders for Reporting app and the shipper's **Track Freight Movement** app.

Contacts

If provided by the ordering party, the **Contacts** section displays the company name of the ordering party along with the phone number and the email address of the contact person. This section also displays the contact details for each individual stop (stop number and location).

Notes

The **Notes** section displays comments left by the ordering party.

Drivers and License Plate

The **Drivers and License Plate** section displays the driver and vehicle license plate information that was provided in the **Freight Orders for Confirmation** app.

Reporting Events in a Freight Order

While your company transports freight for an ordering party, use the **Freight Orders for Reporting** app to report when planned events in the freight order are completed. If a delay occurs, you can also use the app to report a new ETA (expected time of arrival), enabling the ordering party to replan if needed.

Prerequisites

Before you can report the events of a freight order, the freight order must be confirmed in the **Freight Orders for Confirmation** app.

Once the system creates a freight order in the ordering party's **Track Freight Movement** app, this freight order is also available in the **Freight Orders for Reporting** app.

Context

You can report an event from both the **Events to Report** worklist and from the **Reporting** section in the detail view of the freight order. Using the worklist is useful for reporting the events of multiple freight orders while they are executed during the day. Whereas, using the **Reporting** section is useful for reporting several events for one freight order.

If you don't have the information required to report an event, you can skip the event and report it later. For more information, see Skipping an Event.

Procedure

1. Open the **Freight Orders for Reporting** app.
2. On the **Events to Report** worklist, report the first event of the freight order.
    a. **Optional:** If the event cannot be completed at the planned time due to a delay, you can inform the ordering party. To do so, select **Report Delay** from the inline menu of the freight order and enter the details of the delay in the **Report Delay** dialog box. Note, if you don't know the duration of the delay, you can leave the **Expected Time** and **Delay** fields empty.
    b. When the event is complete, select **Report Final Time** from the inline menu of the freight order and complete the **Report Final Time** dialog box. Enter the final time, time zone, reason for delay, and additional details. Note, if you report a time that is earlier than when the freight order was received in the app, the time may not be saved by the shipper's system.

        After reporting the final time of the event, the data for the next planned event is displayed on the worklist.
3. Repeat step 2 for all events in the freight order.
