Reporting Status

Displays a status based on the event reporting in a freight document.

You can view one of the following statuses:

- **Ready for Reporting**

  When a freight document is made available in the **Manage Freight Execution** app, the initial status is set as **Ready for Reporting**.

- **Reporting in Progress**

  When the carrier starts reporting events in the freight document then the reporting status is set as **Reporting in Progress**.

- **Reporting Completed**

  When the carrier has reported all planned events in the freight document or marked the remaining events as **Unable to Report**, then the reporting status is set as **Reporting Completed**.

Current Status

Displays the current status of execution based on the latest planned event reported. You can view whether the execution is as planned, early, on time, or late.

You can view one of the following statuses:

- **As Planned**

  This status appears when no event has been reported for the freight document and the reporting deadline has not yet lapsed.

- **Early**

  This status appears when the latest planned event has been reported and it has occurred ahead of time.

- **On Time**

  This status appears when the latest planned event has been reported and it has occurred on time.

- **Late**

  This status appears when the latest planned event has been reported and it has occurred late.

- **Overdue**

  This status appears when the latest planned event has not been reported by the reporting deadline.

- **Delayed**

  This status appears when a delayed event is reported on either the latest planned event or at the document-level.

Estimated Status

Displays the estimated status of execution based on the latest estimate received for a planned event. You can view whether the execution is running early, running on time, or running late. Note that this is relevant before the planned event has been reported.

You can view one of the following statuses:

- **Running Early**

When the latest planned event has been estimated to happen before time.

- **Running on Time**

  When the latest planned event has been estimated to happen on time.

- **Running Late**

  When the latest planned event has been estimated to happen late.

Proof of Delivery Status

Displays whether the proof of delivery has been reported at the last stop. You can view one of the following statuses.

- **Reported at Last Stop**
- **Not Reported at Last Stop**

Reporting Events

While your company transports freight for an ordering party, you can use the **Manage Freight Execution** app to report planned and unplanned events in the freight document. You can also perform the following when you report an event:

- Report an estimate for any planned event, enabling the ordering party to replan if needed.
- If a delay occurs, you can also use the app to report a delay at both the document-level and at a planned event-level.
- You can report proof of pick-up and proof of delivery with attachments.
- You can report additional events for the supported event types at any stop.

You can report an event directly from the worklist page or the detailed view page for a freight document. When you choose the **Report** button, you can choose one of the following options.

Planned Event

You can report a planned event as follows:

1. Select an event for which you want to report. You can view the list of events planned by the ordering party for you.

   Note that the system pre-selects the next planned event. You can change the selection as required.

2. Enter the final time or estimated time along with the time zone.
3. Optionally, you can enter a reason code and description.
4. Optionally, you can also add an attachment.
5. Optionally, you can add an estimate for events planned in the future.

Unplanned Event

You can report an unplanned event as follows:

1. Select an event from the supported event types.
2. Optionally, select a stop at which this unplanned event must be reported.

3. Enter the final time along with the time zone.
4. Optionally, you can enter a reason code and description.
5. Optionally, you can also add an attachment.
6. Optionally, you can add an estimate for events planned in the future.

Unable to Report Remaining Events

You can choose this option if you will never be able to provide the final time of the event.

Events History

Header

When you choose the **View Events History** button in the detailed view page, you can view all events reported during the freight execution in a card format. This includes all the planned and unplanned events that have been reported multiple times. For each event, you can view the following information in a card format:

- Event type
- Current status

  When a final time is reported for the planned event, you can view this information.
- Estimated status

  When an estimated time is reported for the planned event, you can view this information.
- Location
- Planned on
- Final time

  When a final time is reported for the planned event, you can view this information.
- Estimated time

  When an estimated time is reported for the planned event, you can view this information.
- Business partner
- Attachment
- Reason Code

  When a reason code is available for the planned event, you can view this information.
- Reason Code Description

  When a reason code description is available for the planned event, you can view this information.

Events Overview

When you navigate to additional options in the **Events Overview** sub-tab and choose the **View History** button in the planned event card, you can view all the events that have already been reported for that specific planned event on the right pane.

Invoice Freight Documents

You can view all the freight documents that are ready for invoicing using the **Invoice Freight Documents** app. You can view all the freight documents from one or more of your ordering parties using this app. You can select one or more of these freight documents and create a single invoice or a collective invoice for your ordering party for the services that you provided.

The **Invoice Freight Documents** app consists of a main view and a detail view.

When you launch the app, the system displays the main view with the following areas:

- Filter bar

  Using the filter bar in the header, you can filter the freight documents to restrict the number of freight documents displayed. You can filter based on freight documents based on one or more of the following attributes:

  - Freight document
  - Departure date
  - Ordering Party
  - Arrival date
  - Arrival location
  - Document status
  - Customer account
  - Reference document ID
  - Reference document type
  - Changed on
  - Created on
  - Departure location
  - Gross amount
  - Gross amount currency
  - Purchasing group
  - Mode of transport

- Worklists

  You can use the following worklists: **To be Invoiced**, **Invoicing in Process**, **Awaiting Ordering Party's Response**, **Completely Invoiced**, and **All**.

From the main view, you can navigate to the detail view of a freight document. The detail view has the following areas:

- Header

  You can view information such as the general details, freight document amount, invoiced amount, and invoice status.

- Sections

  You can view further details of the freight document in the following sections:

  - **Information**

- Cargo
- Stages
- Charges
- Business Partners
- Notes
- Attachments

Worklist (Invoice Freight Documents)

To restrict the number of freight documents displayed, you can use the preconfigured worklists (**To be Invoiced**, **Invoicing in Process**, **Awaiting Ordering Party's Response**, **Completely Invoiced**, **All**) that are based on the invoice status of the freight document.

All

The **All** worklist displays all freight documents that are settlement relevant. The system displays the following information for each freight document:

- Ordering party and freight document

  Displays the ordering party details and the freight document ID. Also displays a warning message if the freight document contains zero amount.

- Customer account

  Displays the customer account ID.

- Departure date and time
- Arrival date and time
- Departure location
- Arrival location
- Arrival location time zone
- Mode of transport
- Purchasing group
- Reference documents

To be Invoiced

The **To be Invoiced** worklist displays all freight documents that are not yet invoiced. This worklist displays the same information as the **All** worklist.

Invoicing in Process

The **Invoicing in Process** worklist displays all freight documents for which you have already created an invoice. This worklist displays the same information as the **To be Invoiced** worklist.

Awaiting Ordering Party's Response

The **Awaiting Ordering Party's Response** worklist displays those freight documents which are not yet responded by the ordering party. This worklist displays the same information as the **Invoicing in Process** worklist.

Completely Invoiced

After an invoice has been created for a freight document in your Transportation Management (TM) system (TM in SAP S4 HANA 1809 onwards), the status of the freight document becomes **Completely Invoiced**. These invoices are displayed in the **Completely Invoiced** worklist in the **Invoice Freight Documents** app. This worklist displays the same information as the **Awaiting Ordering Party's Response** worklist.

Document Statuses

You can view the document statuses **Updated**, **Settled Outside**, and **Cancelled**, as appropriate, as a label in the worklist.

When the ordering party makes any changes to a freight document with the status as **Invoicing in Process** in their transportation system, these changes are updated and the freight document status is set as **Updated**.

When the ordering party cancels a freight document in their external system, you can view the **Cancelled** label for the freight document in the worklist. In the ordering party's external system, when a freight order that has been sent for confirmation to the carrier has been cancelled, the corresponding freight order is cancelled in the **Freight Orders for Confirmation** app, **Confirm Freight Bookings (Ocean)**, and the **Invoice Freight Documents** app.

Note that the freight document can be cancelled only when there is no active dispute or an invoice document corresponding to the freight document.

When you settle a freight document outside of SAP Business Network for Logistics in your external system, you can view the **Settled Outside** label for the freight document in the worklist.

Create Invoice

You can select one or more of these freight documents and create a single invoice for your ordering party using the **Create Invoice** button. For more information, see Creating Invoices from Freight Documents.

Note that this button is available only in the following tabs:

- **All**
- **To be Invoiced**
- **Completely Invoiced**

Create Collective Invoice

You can select two or more of these freight documents and create a collective invoice for your ordering party using the Create Collective Invoice button. For more information, see Creating a Collective Invoice.

Note that this button is available only in the following tabs:

- **All**
- **To be Invoiced**

- Completely Invoiced

Mark or Unmark as Settled Outside

You can settle a freight document outside of SAP Business Network for Logistics in your external system. When you do so, you can select one or more relevant freight documents and choose the mark or unmark as settled outside icon. From the drop down menu, you can choose the option **Mark as Settled Outside**. Note that once you mark a freight document as settled, it no longer appears in the **To be Invoiced** tab. You can use the **Document Status** filter to view the marked documents in the **All** tab.

You can also undo this action by choosing the **Unmark as Settled Outside** option from the drop down menu. Note that you can only select up to 100 freight documents from the worklist while choosing one of these options.

Export to Spreadsheet

You can choose the export to spreadsheet button to download the freight documents in Microsoft Excel format. Note that when you use this feature, the applied filters are considered for data selection.

Detail View (Invoice Freight Documents)

The detail view of a freight document for settlement consists of a header and several sections.

Header

You can view the following important information about the freight document:

- **General Details**

  Displays the freight document ID, document status, contact details, delivery date, and purchasing group. When you choose the contact, the system displays the phone number, email, and address of the ordering party.

- Freight document amount

  Displays the sum of all amounts in the freight document

- Invoiced amount

  Displays the total amount of charges that are currently invoiced in the freight document. Note that this amount does not include the charges that are yet to be invoiced.

- Invoicing status

  Displays the status of the invoice, that is, whether the invoice is yet to be invoiced, in process, awaiting ordering party's response, completely invoiced, or submitted.

Information

The **Information** section displays the following subsections:

- **General**

  Displays the total distance, duration, service level, and freight agreement details.

- **Departure Location**

  Displays the date and time and address.

- **Arrival Location**

  Displays the date and time and address.

- **Active Vehicle Resource**

  Displays the mode of transport, means of transport, vehicle code, vehicle type code, and vehicle resource ID.

- **Administrative Data**

  Displays the administrative information.

- **Invoice Details Section**

  You can view the following information for each invoice associated with the freight document:

  - **Invoice**

    Displays the invoice IDs of the included invoices. You can navigate directly to the displayed invoices from this section.

  - **Invoice Date**

  - **Gross Amount**

    Displays the total gross invoice amount of the invoice. That is, if you have a collective invoice, the gross invoice amount is the total of gross amounts from all the included freight documents. Note that the gross amount is the sum of net amount and tax amount.

  - **Document Status**

    Displays the status of the invoice, that is whether it is a draft or if it has been submitted.

  - **Disputes**

- **Reference Documents Section**

  Displays the document type and document ID of the reference documents.

Cargo

The **Cargo** section displays information on the cargo items involved, such as type, locations, quantity, gross weight, net weight, dimensions, and gross volume.

ℹ Note

- You can view the details of all cargo item types such as container, package, product, and service. You can navigate through the entire cargo item hierarchy. For example, from a container to the packages, package to the products or services and so on to view the respective details.
- The ordering party can implement a business add-in (BAdI) to display only the main cargo items.
- Any notes sent by the ordering party with text type `LBNMI` will be discarded as it is a technical text type used to display main cargo items.

Stages

You can view the transportation stages in this tab. You can view the details such as item, type, locations, quantity, gross weight, net weight, dimensions, and gross volume for each stage.

Charges

The Charges section displays the following information:

- Charge description

  Displays the charge type details for each stage in each freight document. Charge types are the classification of charges for which you charge the ordering party.

- Charge type (Transportation System)

  Classification of charge line that indicates the type of charges such base rate, surcharge, or discount, as specified in the ordering party's SAP Transportation Management system.

- Rate amount/unit

  Displays the flat rate amount or rate amount per unit, for example, USD 20 per 1 kg.

- Quantity

  Displays the total quantity relevant for calculating the final amount.

- Final amount

  Displays the final amount that has been derived from the rate amount, quantity, and calculation method.

When you select a charge line, you can view the following additional details specific for the selected charge:

- Transportation charges

  You can view the charge details such as line number, charge type, calculation methods, and payment terms.

  - Line number
  - Charge description

    Displays the classification of charges for which you charge the ordering party. These are the transportation mode-specific codes that are predefined by SAP Business Network for Logistics.

  - Calculation method

    Displays the logic with which the system calculates the charges.

  - Payment terms

    Displays the conditions of payment you agreed with your ordering party with respect to goods supplied or services provided.

  - Logistical reference

    Displays the item or stage information for a charge line (for container, package, product, or stage) from which the system obtains the logistical data.

- Calculation basis

  Displays the actual base or factor with which the system calculated the charges. You can view the calculation basis for rates belonging to a rate table.

- Exchange rates

  Displays the exchange rate information that is used as the basis for currency conversion.

- Notes

Displays the notes specified for the charge line.

Business Partners

You can view the various business partners associated with the freight document. The system displays the role of the business partner (whether the business partner is a carrier or an ordering party). The system also displays the address of the business partner.

Notes

You can view the comments added by the ordering party.

Attachments

You can view the attachments added by the ordering party.

ℹ Note

You can only upload files that fulfil the following criteria:

- Files must be of one of the formats: jpg, gif, png, .pdf, .doc, .docx, .xls, .xlsx
- Image files must be less than 6MB file size
- Document files must be less than 5MB file size
- File name must be less than 150 characters including file extension

Creating Invoices from Freight Documents

You can view all the freight documents from one or more of your ordering parties using the **Invoice Freight Documents** app. You can select one or more of these freight documents and create a single invoice or a collective invoice for your ordering party for the services that you provided.

To create an invoice or a collective invoice from freight documents, perform the following:

Creating an Invoice

To create an invoice, you must select a freight document from the worklist page and choose **Create Invoice**. Alternatively, you can also choose **Create Invoice** on the header area of the detail view of a freight document.

You can also select multiple freight documents from the worklist page and choose **Create Invoice**. The system creates individual invoices, one each for all the selected freight documents.

ℹ Note

- If you already have an invoice in draft version for a freight document, you cannot create a new invoice.
- You cannot create an invoice or a collective invoice for a freight order with the document status as **Cancelled**.

Creating a Collective Invoice
