The app consists of the following areas:

- Filter bar

  You can filter the invitations based on one or more of the filter options, such as inviter's company name, email, city, country/region, that appear in the header area.

- Worklists by status

  The invitations are categorized based on the invitation statuses: **New**, **Accepted**, and **Rejected**.

Worklist (Manage Invitations)

There are different ways to work on the invitations and to set filters. To restrict the number of invitations displayed, you can use the filter bar in the header and the preconfigured worklists (**New**, **Accepted**, **Rejected**) based on the status of the invitation.

Filter Bar

With the filter bar, you can do the following:

- Specify filters to narrow down the worklists and search for invitations.
- Add or remove the filters displayed on the filter bar by choosing **Adapt Filters**.
- Save the current filter settings as a view and apply it later.

  After you specified filters (and pressed Enter) and/or adapted filter display, the current view name shown in the upper-left corner displays a * sign, indicating the view has been changed. Save the view by either of the following:

  - Click the view name to open the **My Views** box and choose **Save** or **Save As**.
  - In the **Adapt Filters** dialog box, choose **Save**.

  Next time when you want to apply the view, just select the view name in the **My Views** box.

> **Note**
> The default **Standard** view cannot be changed.

Worklists

New

The **New** worklist displays all invitations that you have not yet responded to. This worklist displays the following details for each invitation:

- Invitation Number
- Inviter
- Inviter LBN Network ID
- Invitation From
- Phone number
- Email

- City
- Country/Region
- Address
- Accept and reject options

Accepted

The **Accepted** worklist displays all the invitations that you have accepted. This worklist displays the following details for each invitation:

- Invitation Number
- Inviter
- Inviter LBN Network ID
- Invitation From
- Phone number
- Email
- City
- Country/Region
- Address
- Administration information such as Accepted On and Accepted By

Rejected

The **Rejected** worklist displays all the invitations that you have rejected. This worklist displays the following details for each invitation:

- Invitation Number
- Inviter
- Inviter LBN Network ID
- Invitation From
- Phone number
- Email
- City
- Country/Region
- Address
- Administration information such as Rejected On and Rejected By

ℹ Note

Using the ⚙ *Settings* icon on each worklist, you can control the number of columns displayed in the **New**, **Accepted**, and **Rejected** worklists.

You can schedule alerts for the invitations that you receive from potential business partners. On the event of receiving or automatically accepting an invitation, you can specify whether you want to receive a notification in an email using the **Manage Notification Settings** app. For more information, see Manage Notification Settings (Carrier).

Viewing an Invitation

Context

To view an invitation, perform the following:

Procedure

1. Launch the **Manage Invitations** app.
2. You can view all the new invitations in the **New** worklist.

   (Optional) You can retrieve a specific invitation or a set of invitations using the various search filter options such as the inviter's company name, email, city, country/region, that appear on the header area.

   The system also categorizes the invitations based on various attributes and displays them in the following tabs:

   - **New**: Displays all new invitations from potential business partners.
   - **Accepted**: Displays invitations that you have accepted.
   - **Rejected**: Displays invitations that you have rejected.

Accepting or Rejecting an Invitation

Context

You can accept or reject the invitations from potential business partners to connect with their business network. When rejecting, you can indicate a rejection reason to the inviter.

If you accept an invitation, you can connect with the inviter's business network and the system notifies the inviter of the same. If you reject an invitation, you cannot connect with the inviter's business network and the system notifies the inviter of the same.

To accept or reject an invitation, perform the following:

Procedure

1. Launch the **Manage Invitations** app. You can view all the new invitations in the **New** worklist. You can directly accept or reject the invitations in this worklist.
2. Alternatively, you can search for and retrieve a specific invitation using search filter options in the header. Once you retrieve the invitation, you can respond to the invitation by choosing the **Accept** or **Reject** button.

Results

Once you accept or reject an invitation, you can view the details of the invitation in the **Accepted** or **Rejected** worklist as appropriate. You cannot view this invitation anymore in the **New** worklist.

ℹ Note

If you want the system to automatically accept all invitations, select **Automatically accept connection requests (invitations)** in the **Manage Business Profile** app. For more information, see Edit Company Profile.

To get email notification each time when an invitation is automatically accepted, subscribe the **Invitation Auto-Accepted** notification scenario in the **Manage Notification Settings** app.

Settings on Invitations

You can specify the visibility of your company profile and how you process connection requests in the app. To do this, click **Settings on Invitations** on the upper-right concern then specify the followings:

- **Automatically accept connection requests (invitations)**

  Determines whether you want the app to automatically accept connection requests from potential business patterns.

  Default value: No

Freight Contracting

You can participate in freight contracting when a known ordering party sends you a freight request for quotation (freight RFQ). Subsequently, if the freight quotation was awarded, then you can find the corresponding freight documents in the **Freight Orders for Confirmation**, **Confirm Freight Bookings (Ocean)**, and **Confirm Freight Bookings (Air)**.

Your options for responding to the received freight RFQ are determined by the tendering setup implemented by the ordering party.

Your response options depend on the following settings:

- Is the price negotiable?

  If so, you can propose a new price.

- Are the dates and times negotiable?

  If so, you can propose new dates and times.

- Does the ordering party require you to respond?

  If a response is unrequired (indicated by Accept Automatically: Yes) then the freight RFQ will be automatically accepted when the response time runs out, unless you reject it beforehand. If a response is required and you want the job then you must accept the freight RFQ before the response time runs out.

ℹ Note

Your response options change depending on how the ordering party sets up the tendering.

When you accept or reject a freight RFQ, the SAP Business Network for Logistics creates a freight quotation and sends it to the ordering party. The ordering party then evaluates your freight quotation and, according to their strategy, may or not award it to you.

Integration with SAP ERP Central Component (SAP ECC) LE-TRA Shipments

SAP Business Network for Logistics has integrated with the SAP ERP Central Component (SAP ECC) LE-TRA shipments for the subcontracting process. You can view these SAP ECC shipments in SAP Business Network for Logistics.

You can view the shipments sent from your shipper's SAP ECC system in your SAP Business Network for Logistics system.

The system receives the shipment document from SAP ECC and performs the following:

- If the **Means of Transport** of the shipment is **Road**, freight order with **Document Category** as **Shipment** is created in the **Freight Orders for Confirmation** app.
- If the **Means of Transport** of the shipment is **Ocean**, freight booking with **Document Category** as **Shipment** is created in the **Confirm Freight Bookings (Ocean)** app for ocean freight.

You can consume the APIs in SAP API Hub to send these shipments from your SAP Business Network for Logistics system to your external system. You can use the following APIs:

- **Consumer API for Freight Subcontracting** for road shipments
- **Consumer API for Freight Booking** for ocean shipments

Integration with SAP Logistics Management Requests for Quotation (RFQs) and Consignment Orders

SAP Business Network for Logistics has integrated with the SAP Logistics Management RFQs and consignment orders for the tendering and subcontracting process respectively.

You can view the RFQs and consignment orders sent from your shipper's SAP Logistics Management system in your SAP Business Network for Logistics system.

The system receives the RFQs and consignment orders from SAP Logistics Management and performs the following:

- If the document is an RFQ, the document will be visible in the **Freight Requests for Quotation** app.
- If the document is a consignment order, the document will be visible in the **Freight Orders for Confirmation** app.

You can consume the APIs in SAP API Hub to send these shipments from your SAP Business Network for Logistics system to your external system. You can use the following APIs:

- `Consumer API for Freight Tendering` for RFQs
- `Consumer API for Freight Subcontracting` for consignment orders

Freight Requests for Quotation

The **Freight Requests for Quotation** app allows you to accept or reject freight requests for quotations (freight RFQs) that ordering parties have sent to you.

SAP Business Network for Logistics has integrated with the SAP Logistics Management RFQs. **Freight Requests for Quotation** app allows you to view them.

The **Freight Requests for Quotation** app consists of a main view and a detail view.

When you first open the app, the main view is launched. It has two screen areas:

- Filter bar

  Using the filter bar in the header, you can filter the RFQs by one or more of the following attributes:

  - Freight RFQ
  - Ordering party
  - Departure date
  - Departure location
  - Tendering status
  - Shipping type
  - Transport means description
  - Transport means type
  - Acceptable loading start date time
  - Acceptable loading end date time
  - Arrival date
  - Arrival location
  - Arrival state
  - Currency
  - Departure state
  - Freight order ID
  - Price
  - Requested loading start date time
  - Requested loading end date time
  - Vendor ID

- Worklists

  You can use the following worklists: **New**, **Responded To (Open)**, and **All**.

From the main view, you can navigate to the detail view of the selected freight RFQ. The detail view has two screen areas:

- Header

  You can display data such as the price, the remaining time, the contact details of the ordering party and your latest response.

- Sections

  You can display further details in the **Information**, **Cargo**, **Tour**, **Contacts**, **Notes**, and **Attachments** sections.

Email notifications are sent to carriers when the following events are triggered in tendering and subcontracting:

- Create RFQ – when a new request for quotation is sent to the carrier by the shipper
- Cancel RFQ – when the shipper cancels the request for quotation for the carrier (which is sent earlier)

The notifications include a link that the user can click to view the relevant status or perform any action they need to carry out. The email also includes a request to perform the necessary action on or before a specific date.

Worklist (Freight RFQs)

To restrict the number of freight requests for quotation (freight RFQs) displayed, you can use the preconfigured worklists (**New**, **Responded To**, **All**) according to the status of the freight RFQ.

New

The **New** worklist displays all freight RFQs that you've not yet responded to. For each freight RFQ, the following information is displayed:

- Ordering party and freight RFQ
- Remaining time
- Departure date and time
- Departure location
- Arrival date and time
- Arrival location
- Stops
- Price
- Freight Order
- Acceptable loading start date time
- Acceptable loading end date time
- Arrival state
- Departure state
- Mode of transport
- Requested loading duration
- Requested loading start date time
- Requested loading end date time
- Shipping type
- Transport means description
- Transport means type
- Vehicle resource ID
- Vendor ID

The freight RFQs are only displayed if the response due date and time has not yet been reached and the tendering is still open. When there is no remaining time, the freight RFQs are moved to the **All** worklist.

Responded To (Open)

The **Responded To (Open)** worklist displays all freight RFQs that you've already responded to and for which a freight quotation has been created. The **Responded To (Open)** worklist displays the same information as the **New** worklist.

The freight RFQs are only displayed if the response due date and time has not yet been reached.

All

The **All** worklist displays the same information as the **New** worklist.

Detail View (Freight RFQ)

The detail view of a freight request for quotation (freight RFQ) consists of a header and several sections.

Header

The **Header** section displays important data about the freight RFQ as well as data related to the response you can send to your ordering party.

The following fields may be of particular interest for you:

- Price (**Negotiable** or **Non-negotiable**)

  Whether the price is negotiable or not depends on the ordering party's decision.

- Remaining time (**Accept Automatically: Yes/No)**

  If it says **Accept Automatically: Yes**, the network will automatically accept the freight RFQ for you right before the response due date and time is over. Of course, you can manually accept or reject the freight RFQ before that point in time.

- Your latest response (**Accepted**, **Accepted with Change**, **Rejected**, **Accepted Automatically**)

- Contact details of the ordering party

Information

The information section displays the following details:

- General data section

  Displays the freight order, total distance, total duration, response due date and time, number of loading and unloading stops, mode of transport, and total gross weight, volume, and quantity.

- Departure location section

  Displays the date and time of departure and address of departure location.

- Arrival location section

  Displays the date and time of arrival and address of arrival location.

- Transport requirements section

  Displays whether you have opted to view the details of dangerous goods and the temperature requirements.

> **Note**
>
> If the ordering party has entered dangerous goods information in their SAP Transportation Management (TM) system, this information is transferred to SAP Business Network for Logistics. To view this information, in the **Information** section, choose **Yes** under **Dangerous Goods**, which opens a window containing details about the item type, relevant regulations, and more detailed information such as storage instructions, temperature control, and emergency temperature. You can choose to display the dangerous goods information in any language that the ordering party has specified previously in the TM system.

- Active vehicle resource section

  Displays the transport means description, transport means type, shipping type, and vehicle resource ID.

- Terms and conditions

  Displays the incoterm and incoterm location.

  Note that you can view the incoterm location details that the ordering party has added in the **Manage Locations** app. If the ordering party has not added this information, you can view the text specified for incoterm location in the ordering party's external transportation system.

- Administrative data section

  Displays the date and time the freight order was received, details of the last responded person and time.

Cargo

The **Cargo** section displays data about the cargo items involved, such as weight, quantity, and special transport requirements.

The following fields may be of particular interest to you:

- Item ID

  You might need the item ID to clarify with your ordering party open issues regarding a cargo item.

- Dangerous Goods

  If the ordering party has provided dangerous goods information, you can view this information from the **Cargo** section by choosing **Yes** in the **Dangerous Goods** column. This opens a window containing details about the item type, relevant regulations, and more detailed information such as storage instructions, control temperature, and emergency temperature.

Stops and Stage Details

When you select a cargo item and choose **View Stage and Stop Details**, you can view the stop and stage details for the cargo item. In the **Stop Details** tab, for each stop within the stop sequence, the address of the ordering party is displayed.

You can toggle between the **Loading** and **Unloading** buttons to view the information specific to the activity. The **Loading** tab displays the following details:

- Loading start date and time
- Loading end date and time
- Acceptable start date and time
- Acceptable end date and time
- Cargo items to be loaded

The **Unloading** tab displays the following details:

- Unloading start date and time
- Unloading end date and time
- Acceptable start date and time
- Acceptable end date and time
- Cargo items to be unloaded

For each transportation stage, the cargo items to be loaded or unloaded are displayed.

ℹ Note

- You can view the details of all cargo item types such as container, package, product, and service. You can navigate through the entire cargo item hierarchy. For example, from a container to the packages, package to the products or services and so on to view the respective details.
- The ordering party can implement a business add-in (BAdI) to display only the main cargo items.

  Any notes sent by the ordering party with text type `LBNMI` will be discarded as it is a technical text type used to display main cargo items.

  You can view the aggregated dangerous goods information for the filtered items at the main cargo item level.

Tour

The **Tour** section displays the stop sequence. For each stop, you can view data such as the address location, the dates and times, and the loading or unloading activity at the location.

Contacts

If provided by the ordering party, the **Contacts** section displays the company name of the ordering party along with the phone number and the email address of the contact person. This section also displays the contact details for each individual stop (stop number and location).

Notes

The **Notes** section displays the comments previously left by the ordering party and yourself, as well as enabling you to add new notes. Note: When you add a new note, it is only sent when you accept or reject the freight RFQ.

ℹ Note

- Notes are intended to provide additional information related to the business document or business process. You're recommended to avoid entering sensitive personal data.
- Any notes sent by the ordering party with text type `LBNMI` will be discarded as it is a technical text type used to display main cargo items.
