Three Options

Carriers have three options to collaborate with shippers:

Option 1) Using web portal (Web UI) → all you need is to register an account on BNL.

Option 2) Integrate carrier's backend system with BNL via API

Option 3) Integrate carrier's backend system with BNL via EDI

For Option 2 and 3, you need to have an account first, then integrate.

**It is free to register, use and integrate with SAP BNL platform. No charge for carriers.*

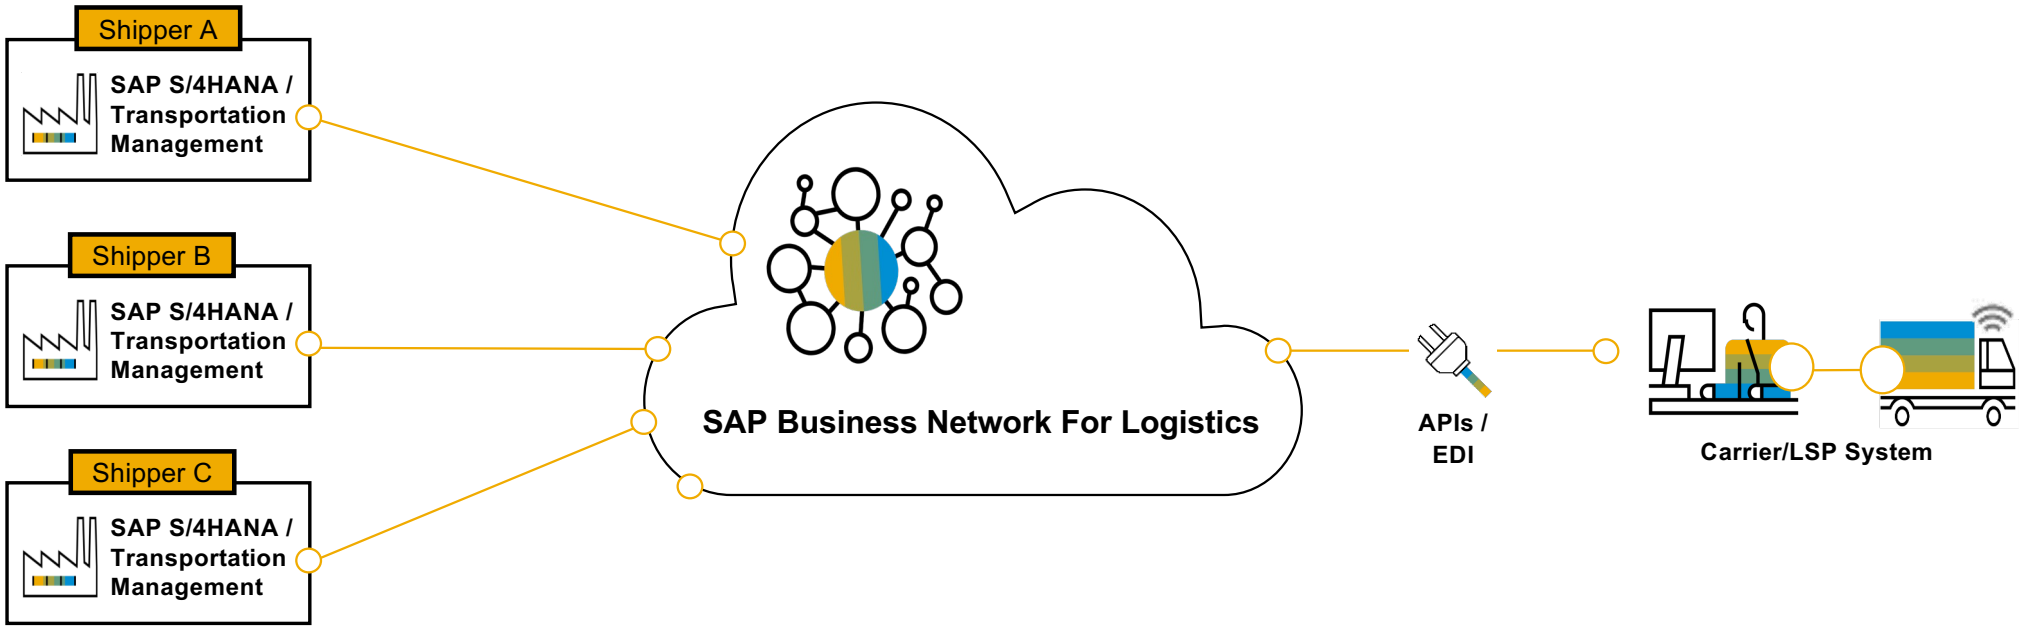

**Based on volume and carrier company IT capability, carriers could choose either to use web portal to work with shipper, or integrate with BNL platform to automate the process.*

**SAP standard API covers more business scenarios, it may request carrier IT to have developer skills.*
**SAP standard EDI covers relatively less business scenarios, most carriers are familiar with it.*

Carrier Collaboration Options

API

- More functionality
- Requires Development or Middleware
- Faster communication
- API Docs

EDI

- Attachments not supported
- Typically less effort to build integration
- Requires carriers have an SFTP server
- EDI Docs

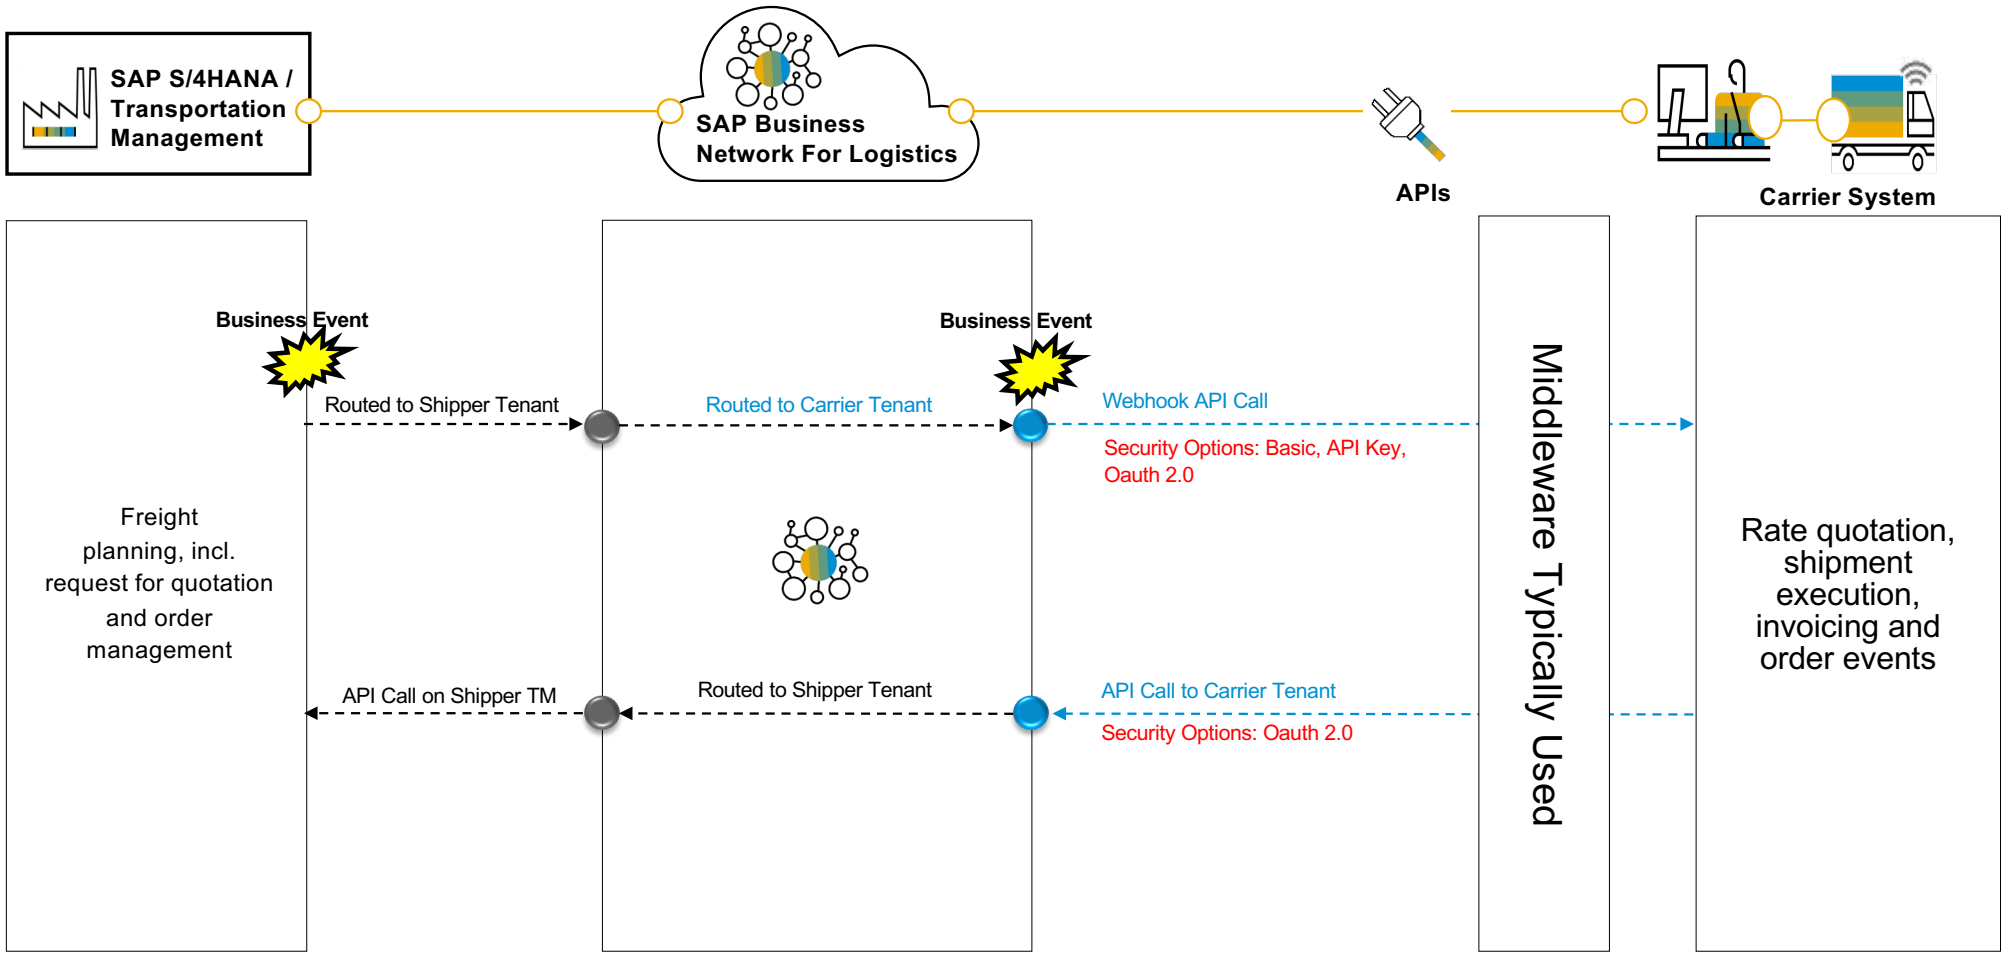

* Some functionality only available in the portal – Dock Appointment Scheduling, Freight Settlement Disputes

** EDI has no industry support for road quotes

*** Functionality not covered by integration must be done in the portal
