

To enable communication from the data contributor to the solution owner for inbound messages (EDIFACT IFTSTA), you must activate the *Enable Inbound Connections* switch under *Connection Settings* and save your setting.

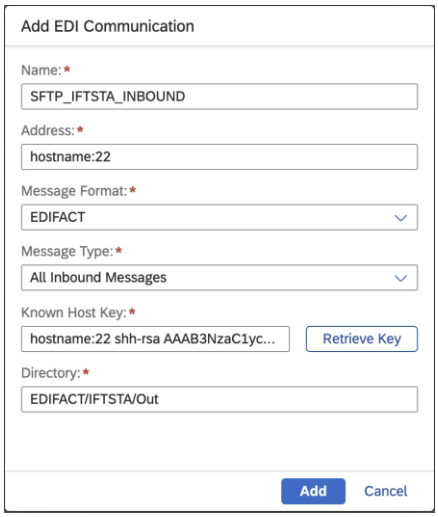

Choose *Manage Details* in the upper right corner.

Under the *Communication Details* tab, choose *Add* and select the SFTP option from the dropdown menu.

Enter the following data in the *Add EDI Communication* window:

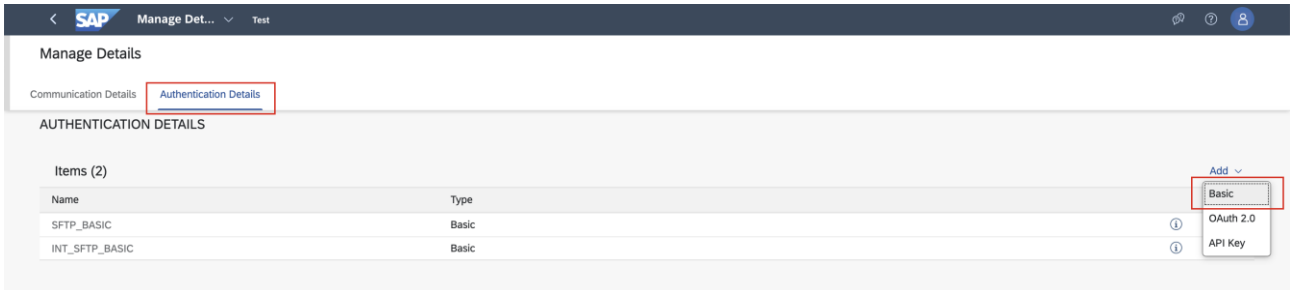

For more information, see Specifying the Authentication Details and Base URLs for Your System's Endpoints.

Note

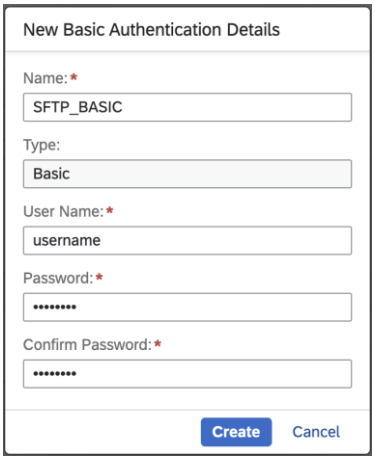

After fetching the files from the directory configured above, SAP Business Network for Logistics will delete them.

If you need to archive processed files, please set up your own process. For example, copy the files to another location before storing them in the execution directory.

Under the *Authentication Details* tab, choose *Add* and select the BASIC option from the dropdown menu.

Enter the following data in the *New Basic Authentication Details* window:

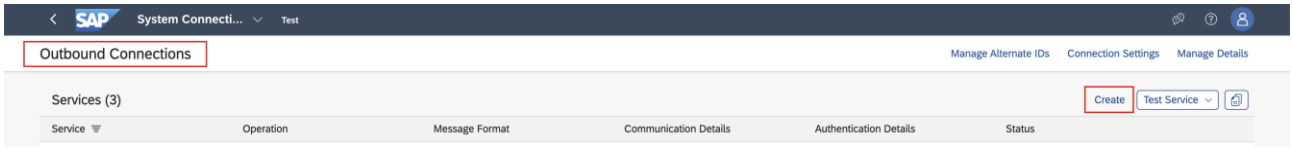

Ensure that your user has *Read*, *Write* and *Delete* permissions.

Go back to the entry page of the *System Connections* app and create one connection for the *EDI Inbound All* service with the *Pull EDI* operation. In the Create Service dialogue box, you can define the regular EDI file polling configuration based on your requirement.

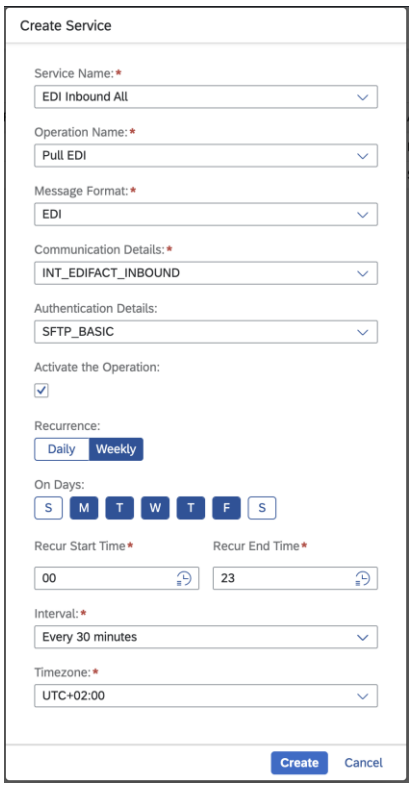

To do so, create a new service:

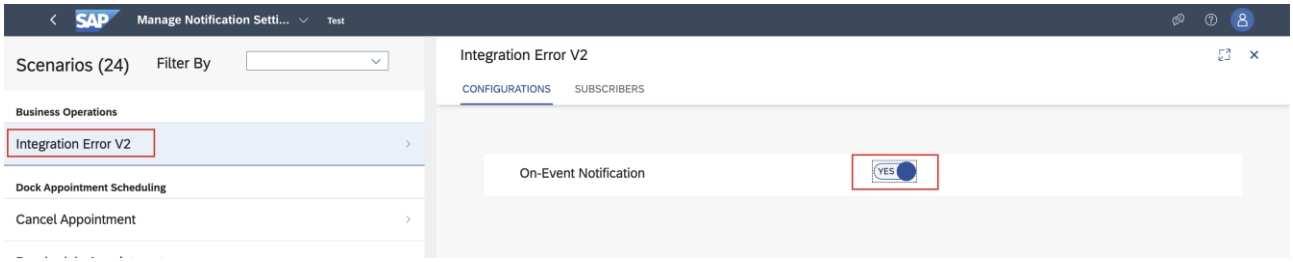

Enter the following data for the new service. Using the Communication Details and Authentication Details created in previous steps.

The EDI Inbounding polling job will pull the EDI files from the communication SFTP server regularly based on the recurrence settings defined in the lower part of the dialogue box. For more information, see Automating EDI Pulling | SAP Help Portal.

STEP 4: EMAIL NOTIFICATION FOR INTEGRATION ERRORS

Configure the email notification feature in the Manage Notification Settings app to receive alerts about integration errors.
To do so, enable On-Event Notification for the *Integration Error V2* scenario.

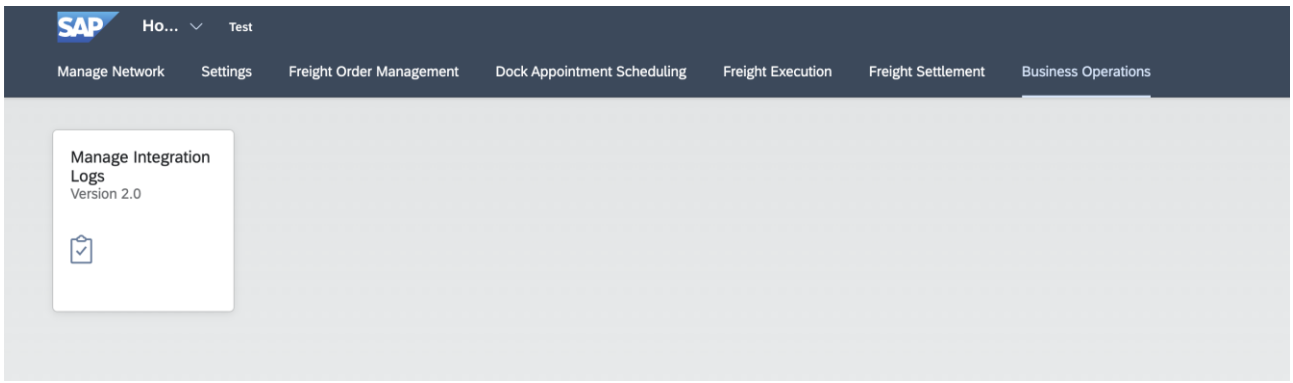

Please refer to the following blog for more details:

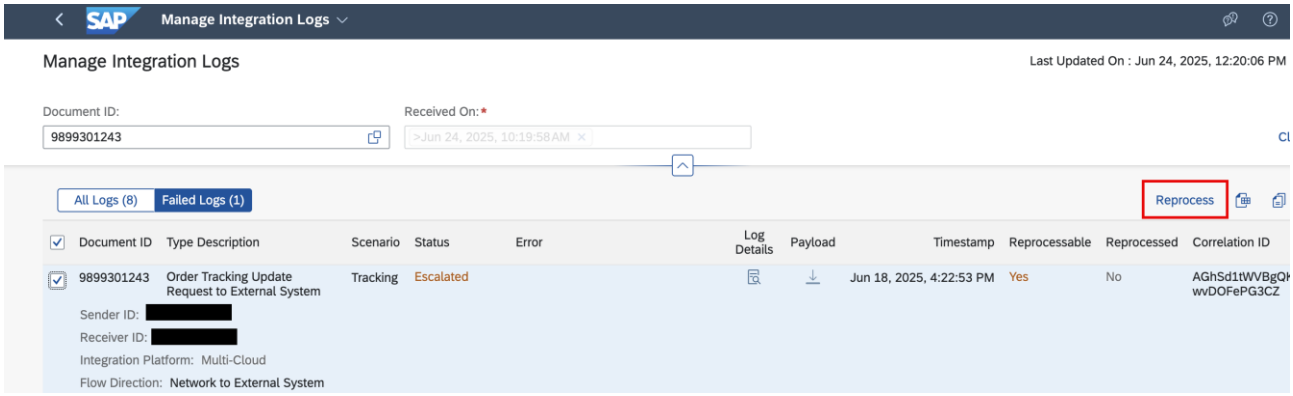

Email notification for integration error in SAP Business Network for Logistics | SAP Blogs

OPERATIONAL MONITORING

The *Manage Integration Logs* app allows you to monitor the inbound and outbound messages that are processed from SAP Business Network for Logistics.

Messages with status *Failed* or *Escalated* can be reprocessed.

Please refer to application help for more details: Manage Integration Logs | SAP Help Portal
