9. SUPPORT AND INCIDENT RESOLUTION 32

1. Introduction

This document explains the required organizational and configuration steps for the consumption of project44 services through SAP Business Network Freight Collaboration as well as SAP Business Network Global Track and Trace.

For tracking-related scenarios, SAP recommends using SAP Business Network Global Track and Trace.

SAP is extending the reach of the SAP Business Network with project44 add-ons that provide real-time visibility content.

These add-on services leverage the project44 multi-mode carrier network with its established connectivity to carrier and logistics provider systems, truck telematics, electronic logging devices, and so on.

With the add-ons for project44 visibility services, SAP Business Network users can benefit from the availability of actual shipment execution insights, such as real-time shipment location and event status for full truck loads, and real-time milestone status for less than truck load shipments. This allows for a holistic view of both planned and actual shipment status, as well as automatic business event detection.

project44 visibility content with business partner systems are available to SAP Business Network for Logistics users through supplementary, add-on licenses from SAP.

SAP Business Network for Logistics provides tracking capabilities with the integration of project44 content, covered by the following add-ons:

- SAP Business Network, project44 FTL visibility add-on
- SAP Business Network, project44 LTL visibility add-on
- SAP Business Network, project44 ocean visibility add-on
- SAP Business Network, project44 air visibility add-on
- SAP Business Network, project44 parcel visibility add-on
- SAP Business Network, project44 rail visibility add-on*

* No standard integration into SAP Business Network for Logistics available; custom integrations provided by project44, with proper implementation project scoping exercise.

For more information on how to leverage the project44 add-ons for customer projects, see the slides for SAP Business Network Global Track and Trace and project44.

2. Prerequisites (SAP Business Network for Logistics setup and SAP S/4HANA integration)

For SAP Business Network Freight Collaboration:

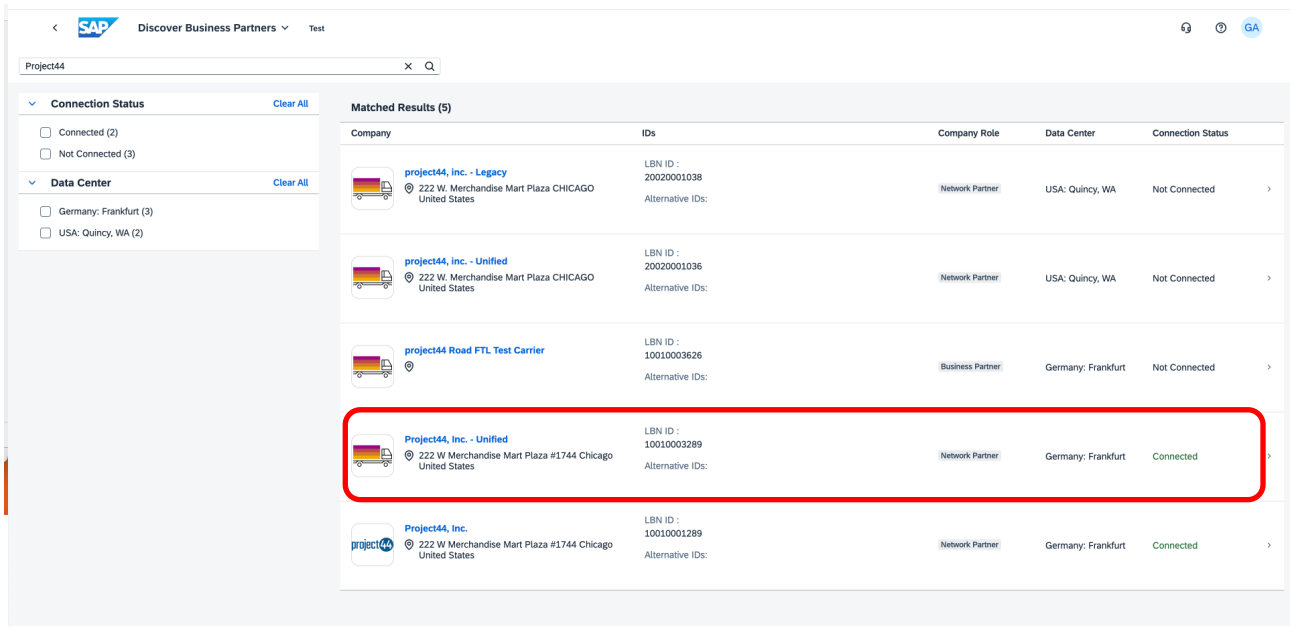

- Acquisition of a project44 license.
- Integration setup from your backend system to SAP Business Network for Logistics as mentioned in the Connectivity chapter of the *Administration Guide for Shippers*.
- Setup of SAP Business Network Freight Collaboration shipper tenant, as mentioned in the Onboarding chapter of the *Administration Guide for Shippers*.

For SAP Business Network Global Track and Trace:

- Acquisition of a project44 license.
- Carriers must be onboarded onto project44. Contact your project44 solution architect or customer success manager for onboarding details.
- Setup of SAP Business Network Global Track and Trace solution owner tenant as mentioned in the Onboarding chapter of the *Administration Guide for Solution Owners*.

3. Connecting with project44

You should find project44 in the *Discover Business Partners* app and request a connection.

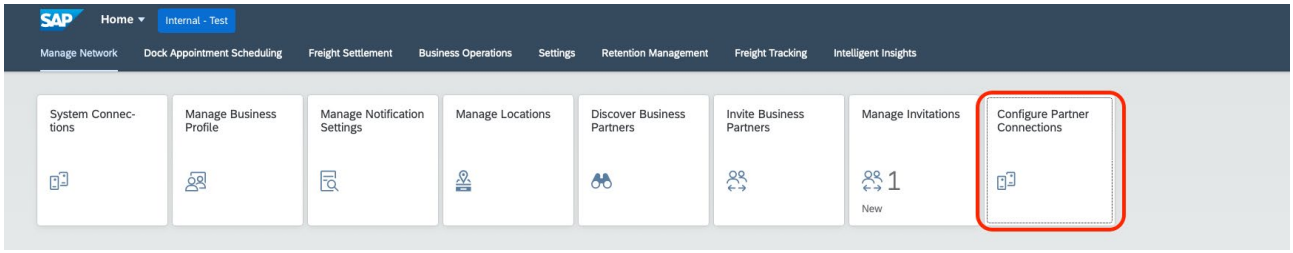

Below project44 connections are available in the *Discover Business Partners* app based on your test or production tenants. You must connect to request connection to project44.

SAP Data Center	project44 Environment	Service Plan	Name	LBN ID
AWS data center for Europe (EU10)	North America	Test	Project44, Inc. - Unified	10010003289
		Production	Project44, Inc. - Unified	10010003288
	Europe	Test	Project44, Inc. - EU Test	10020002101
		Production	Project44, Inc. - EU	10020002066
Microsoft Azure data center for US West (US20, not recommended)	North America	Test	Project44, Inc. - Unified	20020001036
		Production	Project44, Inc. – Unified	20020001035

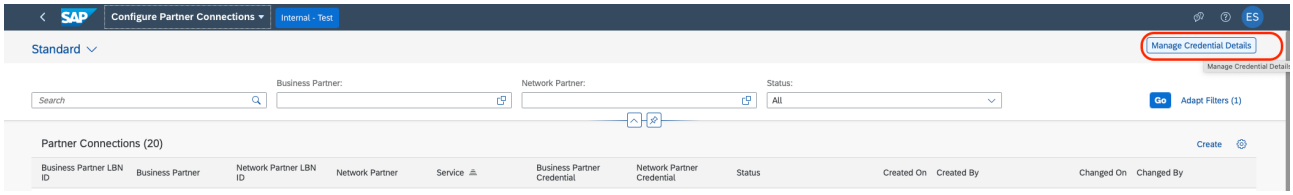

After project44 confirms the connection, a project44 account is created and credentials are issued to you by email from project44.

These credentials should be maintained by you in the *Configure Partner Connections* app:

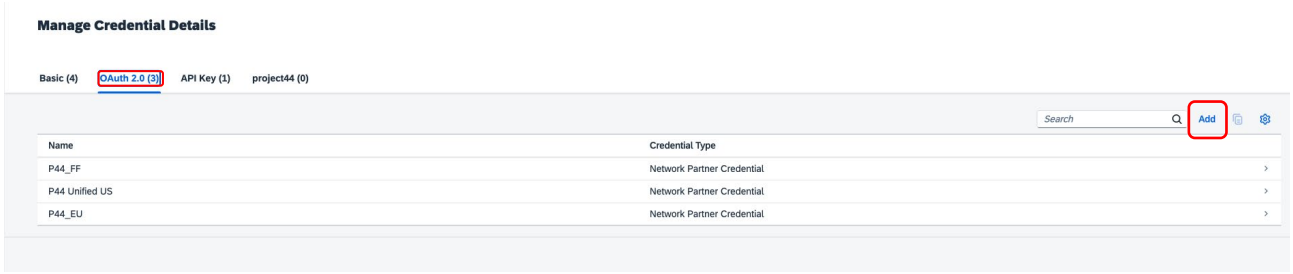

Step 1

Step 2

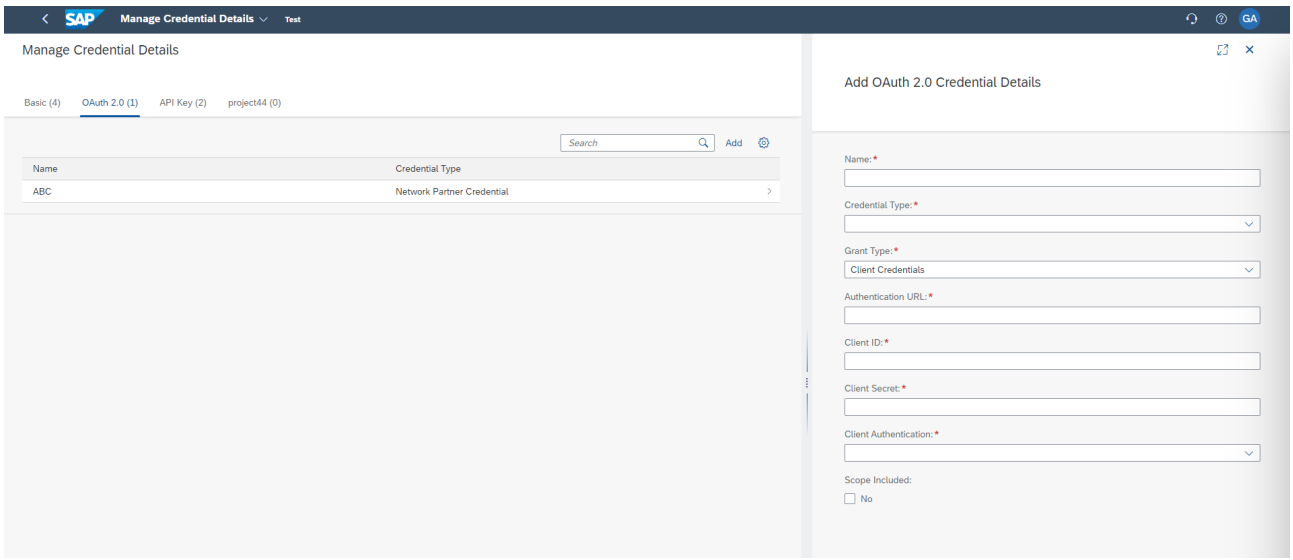

Step 3

Step 4

Provide the required information. The authentication URLs for North America (NA) and Europe (EU) tenants are as follows:

- NA: https://na12.api.project44.com/api/v4/oauth2/token
- EU: https://eu12.api.project44.com/api/v4/oauth2/token

4. Onboarding of Business Partners to SAP Business Network for Logistics and project44 (Optional for GTT)

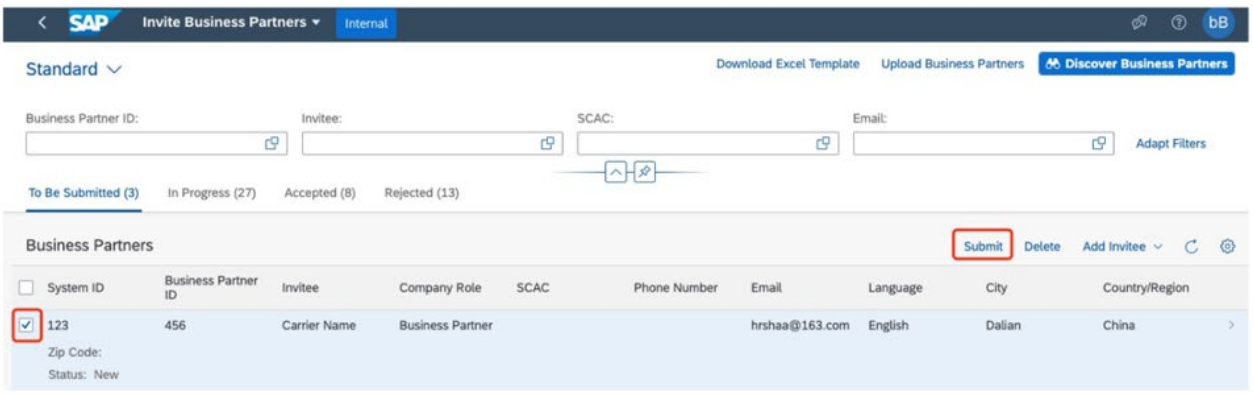

For tracking-related scenarios, SAP recommends using SAP Business Network Global Track and Trace. This section is only relevant for B2B collaboration.

Onboarding Methods (Mandatory for SAP Business Network Freight Collaboration)
You need to have invited all business partners using project44 services to SAP Business Network for Logistics and ensured that they have been fully onboarded. This is the standard onboarding process that is outlined in the Invite Business Partners section of the *Administration Guide for Shippers* of SAP Business Network Freight Collaboration. The two methods that can be used for this step are detailed below. Our customer support team is available to assist you with any difficulties you experience.

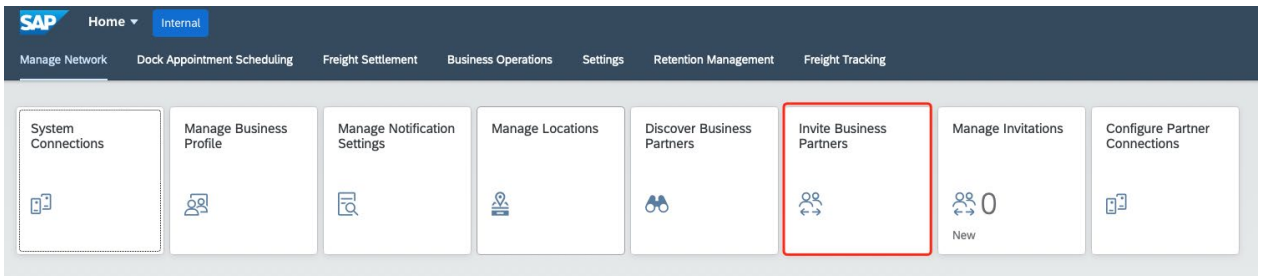

Method 1: Mass upload

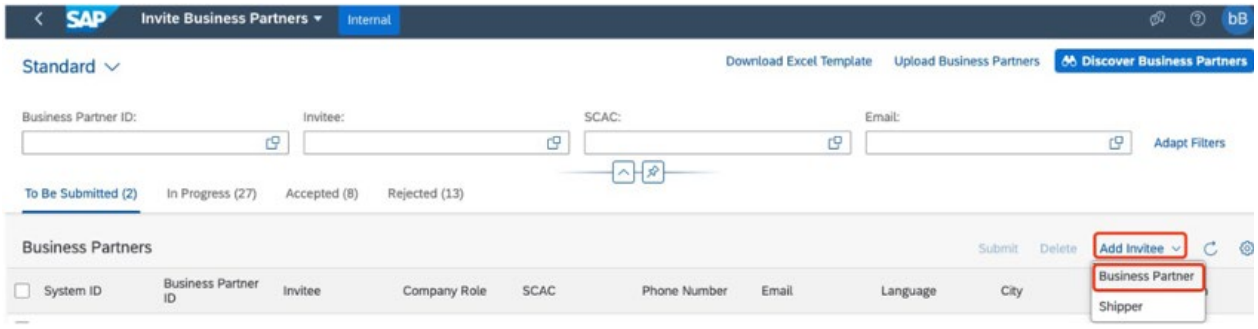

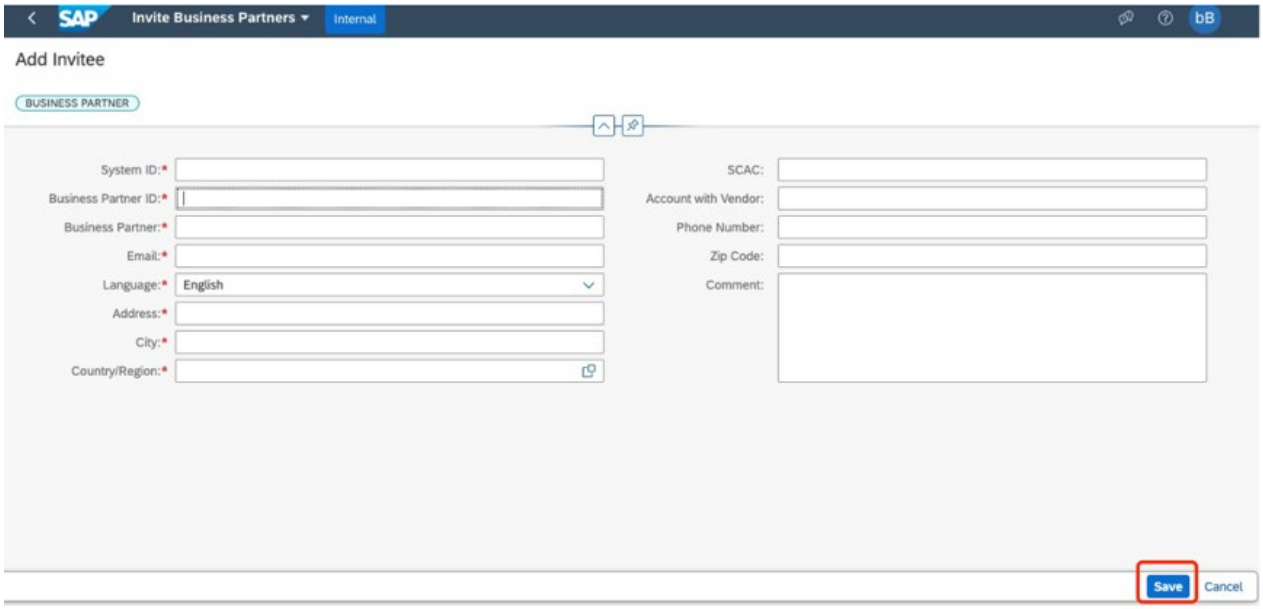

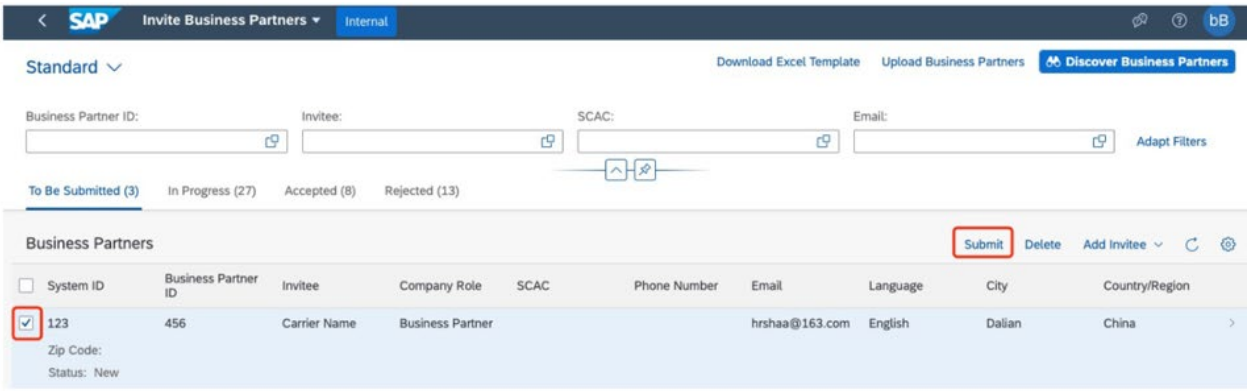

Method 2: Manual upload

After all business partners have been onboarded onto SAP Business Network for Logistics, you need to add the business partners' LBN IDs to your master data. For details, see Updating LBN IDs in SAP Transportation Management (SAP TM).
