STEP 3: ANSI X12 214/301/310/315/843/990/210 (INBOUND) WITH SFTP POLLING

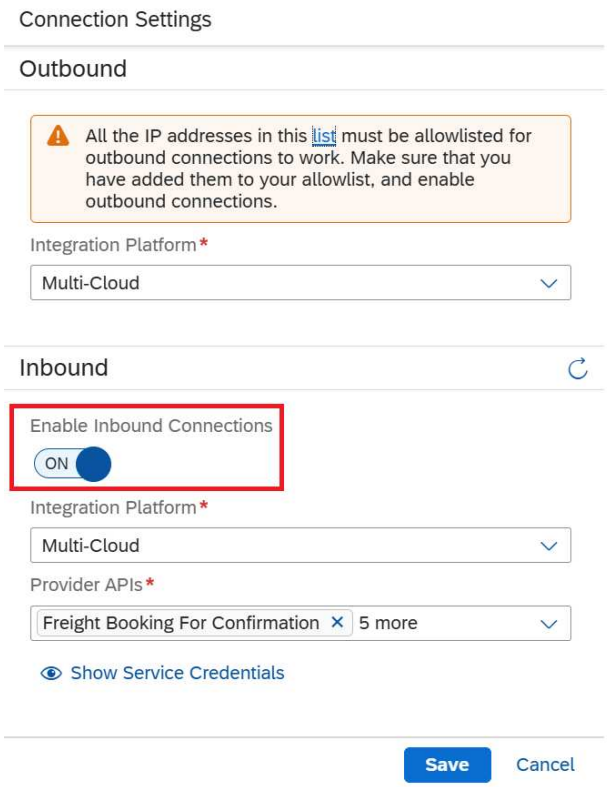

On the *Manage Network* tab of your SAP Fiori launchpad, select the *System Connections* app.

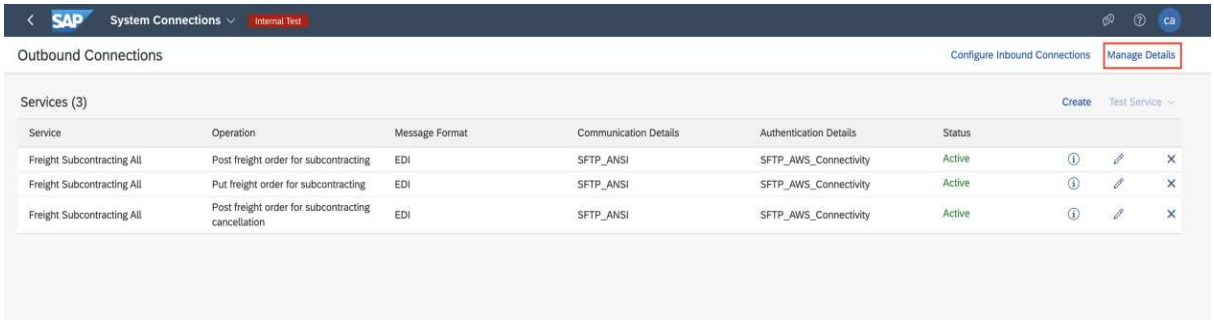

To enable communication from the carrier to the shipper for inbound messages (ANSI 214/990/210), you must turn on the *Enable Inbound Connections* toggle in Connection Settings.

Proceed as follows:

1. Choose *Connection Settings* in the upper-right corner.
2. Turn on the *Enable Inbound Connections* toggle.
3. Select the *Integration Platform* as *Multi-Cloud.*

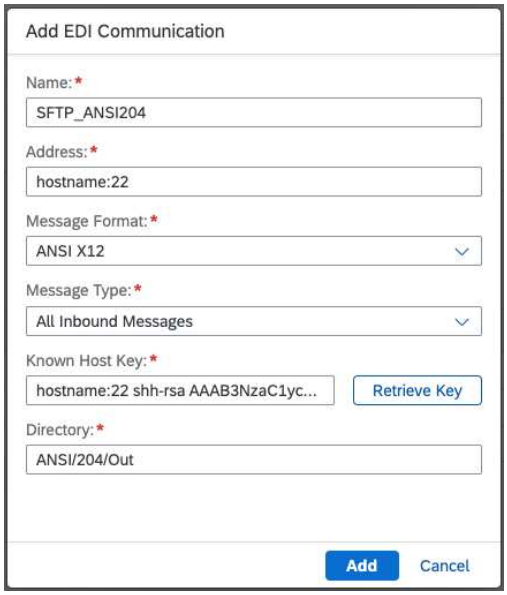

Choose *Manage Details* in the upper-right corner.

Under the *Communication Details* tab, choose *Add* and select the SFTP option from the dropdown menu.

Enter the following data in the *Add EDI Communication* window:

For more information, see Specifying the Authentication Details and Base URLs for Your System's Endpoints.

Note

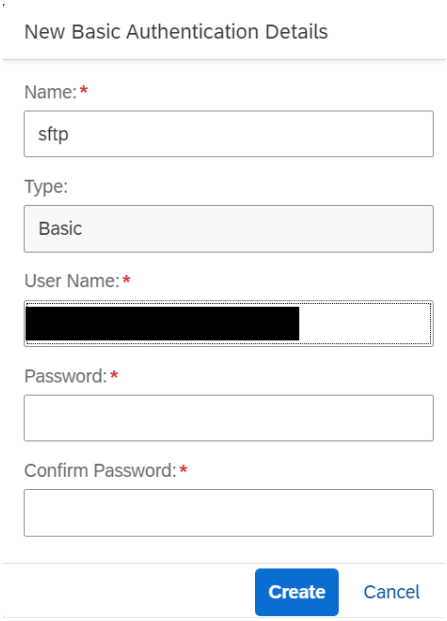

After fetching the files from the directory configured above, SAP Business Network for Logistics will delete them.

In case you still require archiving of the processed files, please implement your own process, for example by copying the files to another location before storing in the execution directory.

Under the *Authentication Details* tab, choose *Add* and select the BASIC option from the dropdown menu.

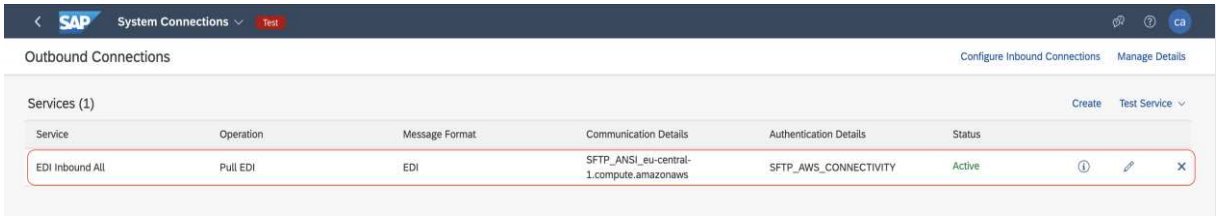

Enter the following data in the *New Basic Authentication Details* window:

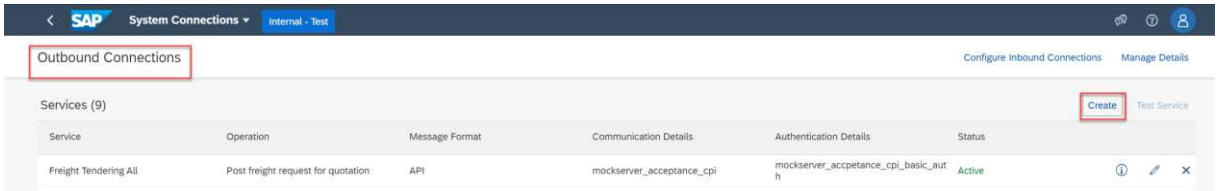

Ensure that your user has *Read*, *Write* and *Delete* permissions.

Go back to the entry page of the *System Connections* app and create one outbound connection for the *EDI Inbound All* service with the *Pull EDI* operation.

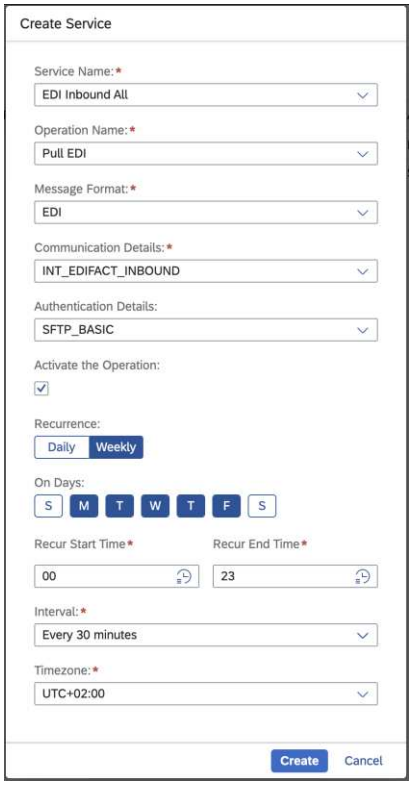

To do so, create a new service:

Enter the following data for the new service. Using the Communication Details and Authentication Details created in previous steps.

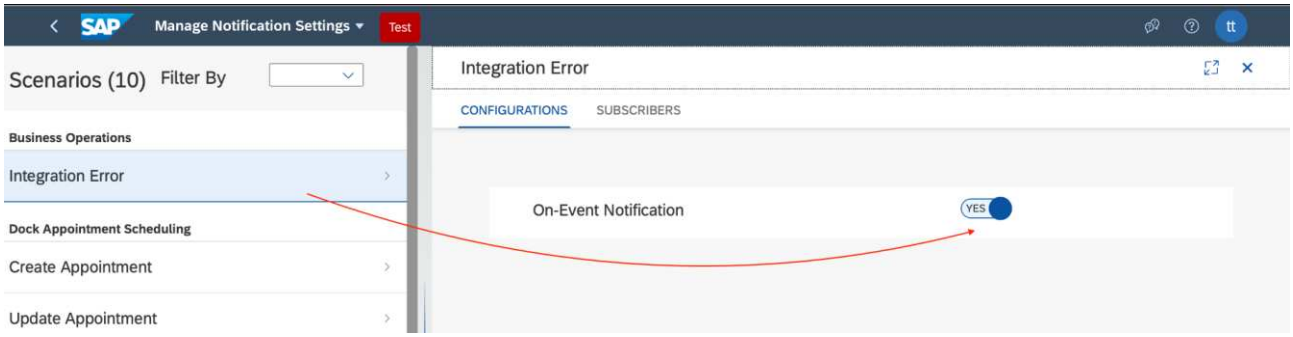

The EDI Inbounding polling job will pull the EDI files from the communication SFTP server regularly based on the recurrence settings defined in the lower part of the dialogue box. For more information, see [Automating EDI Pulling | SAP Help Portal].

STEP 4: EMAIL NOTIFICATION FOR INTEGRATION ERRORS

You have to configure the email notification feature in the *Manage Notification Settings* app so that you are informed in case of integration errors.

To do so, enable on-event notification for the *Integration Error* scenario.

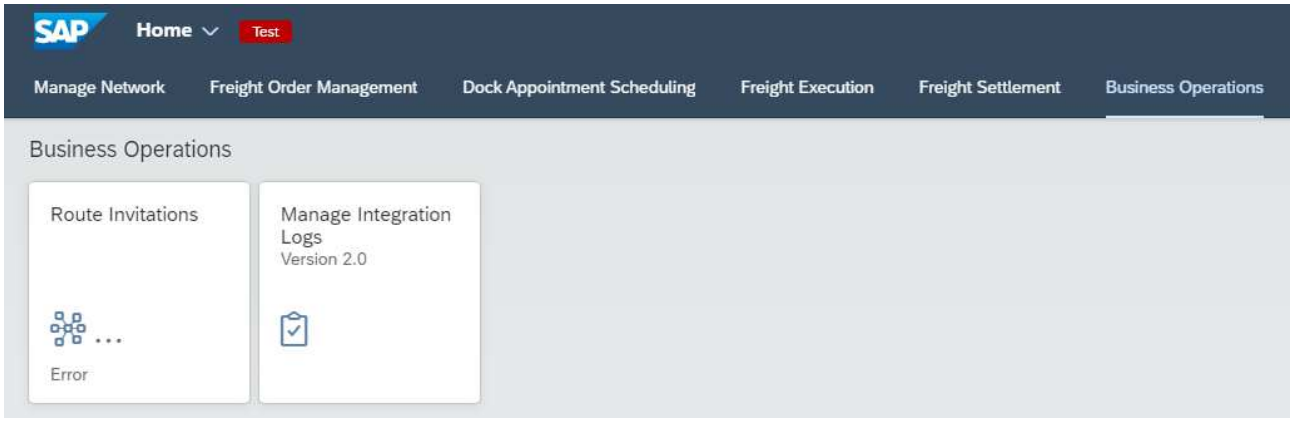

Please refer to the following blog for more details:

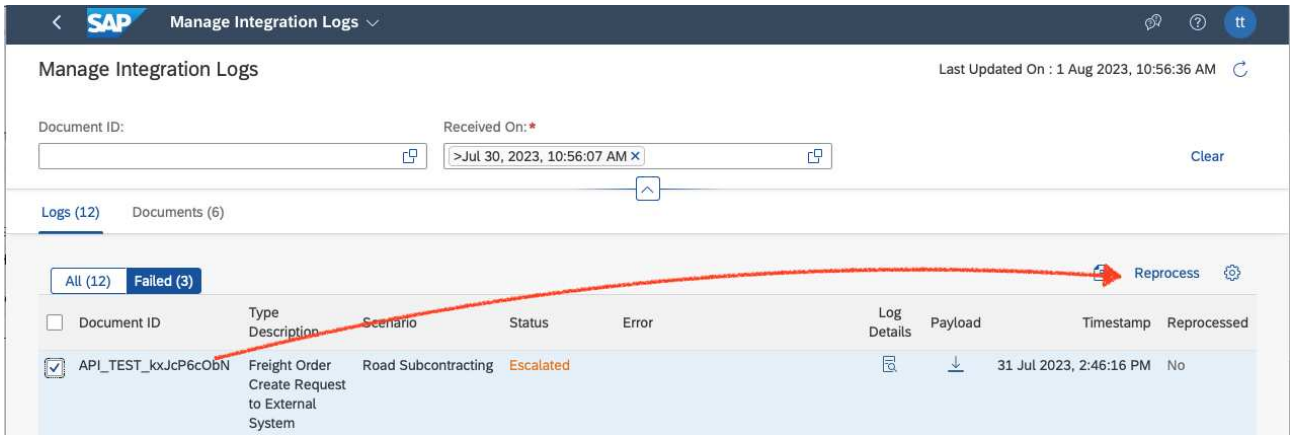

[Email notification for integration error in SAP Business Network for Logistics | SAP Blogs]

OPERATIONAL MONITORING

The *Manage Integration Logs* app allows you to monitor the inbound and outbound messages that are processed from SAP Business Network for Logistics.

Messages with status *Failed* or *Escalated* can be reprocessed.

Please refer to application help for more details: [Manage Integration Logs | SAP Help Portal]
