↓ **Inbound**

↑ **Outbound**

Note: the efforts can differ based on scenarios, capacity and skillset.

INTERNAL – SAP and Partners Only

Consumer APIs / EDI Requirements

API	Shipper CPC Required	Exact Endpoint Required
Freight Tendering	No	Yes
Freight Subcontracting	No	Yes
Freight Booking	Yes	No
Order Tracking	Yes	No
External Planning	Yes	No

EDI	Shipper CPC Required
Freight Subcontracting	No
Order Tracking	Yes
Freight Booking*	Yes

* Ocean Booking has extremely limited support

INTERNAL – SAP and Partners Only

Shipper's Configure Partner Connection app

Shipper is in control of enabling carrier side Consumer APIs

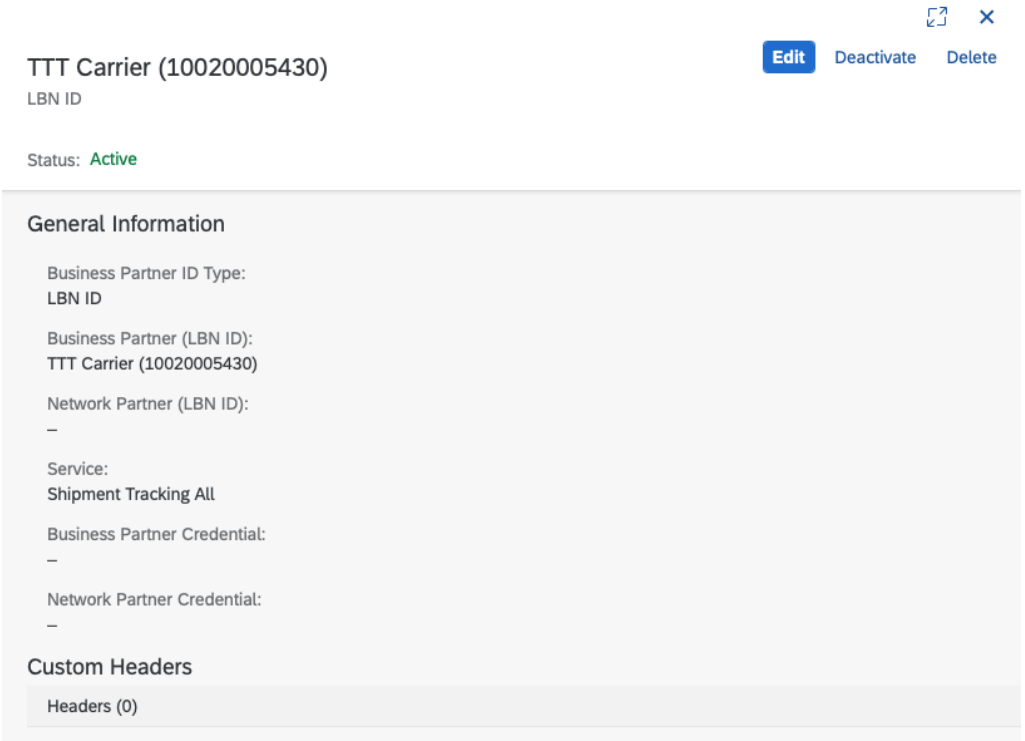

They do this with the Configure Partner Connection app

Optionally can add custom request headers needed by the carrier

Can also optionally configure authorization for carrier integration (not common)

Can configure at different levels of granularity. **Example:** Shipment Tracking all vs Shipment Road Tracking LTL.

Note: Shipment Tracking all takes precedence.

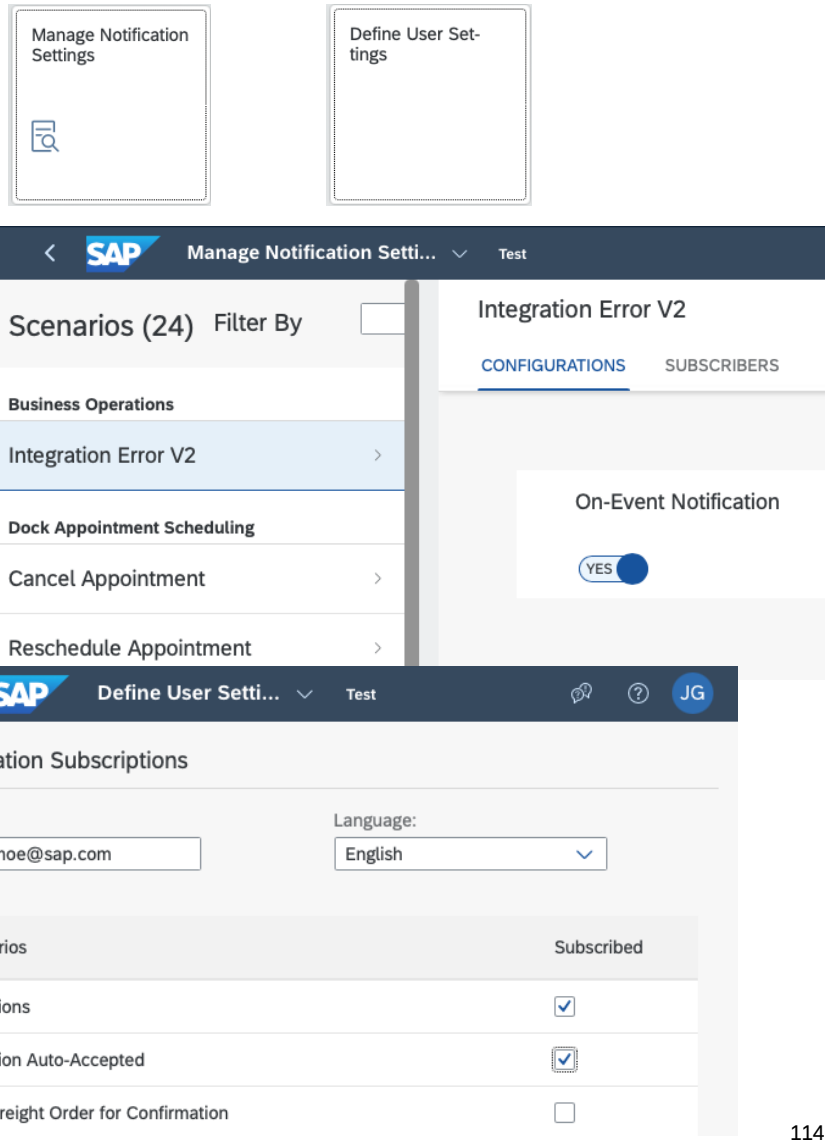

Integration Error Email Notifications

Carriers can configure email notifications to be sent out when errors occur. Two step process:

- Manage Notification Settings app
  - Tenant admins can turn on notifications

- Define User Settings app
  - All tenant users can subscribe to email notifications
  - Subscribe to Integration Errors V2, Invoice with API Error
  - Many other notifications you can subscribe to

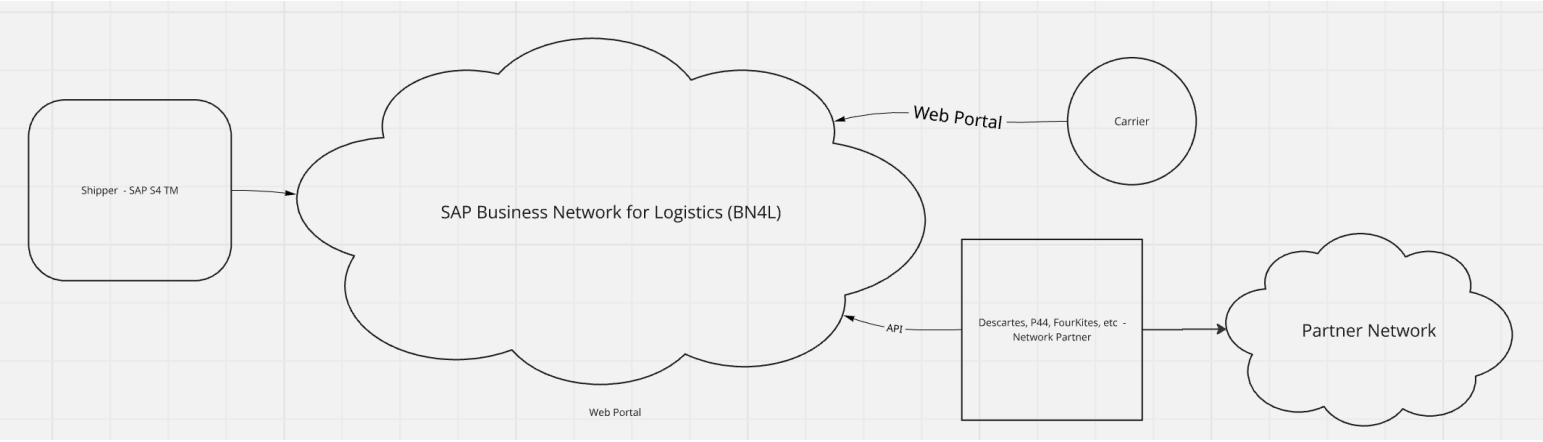

INTERNAL – SAP and Partners Only

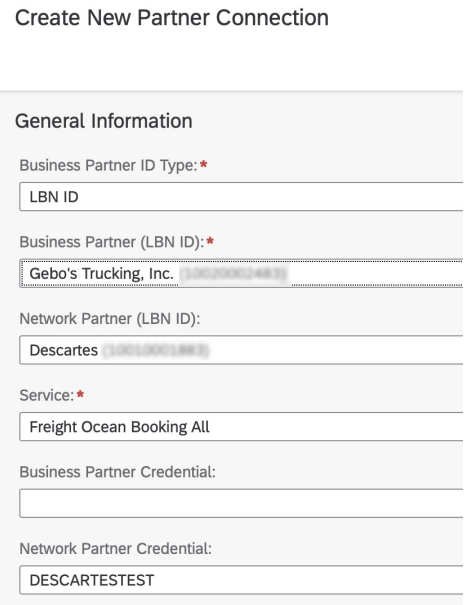

Network Partners

Network Partners are a special tenant type that allows them to receive data on behalf of carriers on the network – Used for SAP Partner Solutions on BN4L

For example: a Freight Order is sent to a carrier tenant for confirmation, but when the tracking request is sent it is instead sent to a Visibility Provider “Network Partner”

The routing is controlled in the Shipper’s CPC app

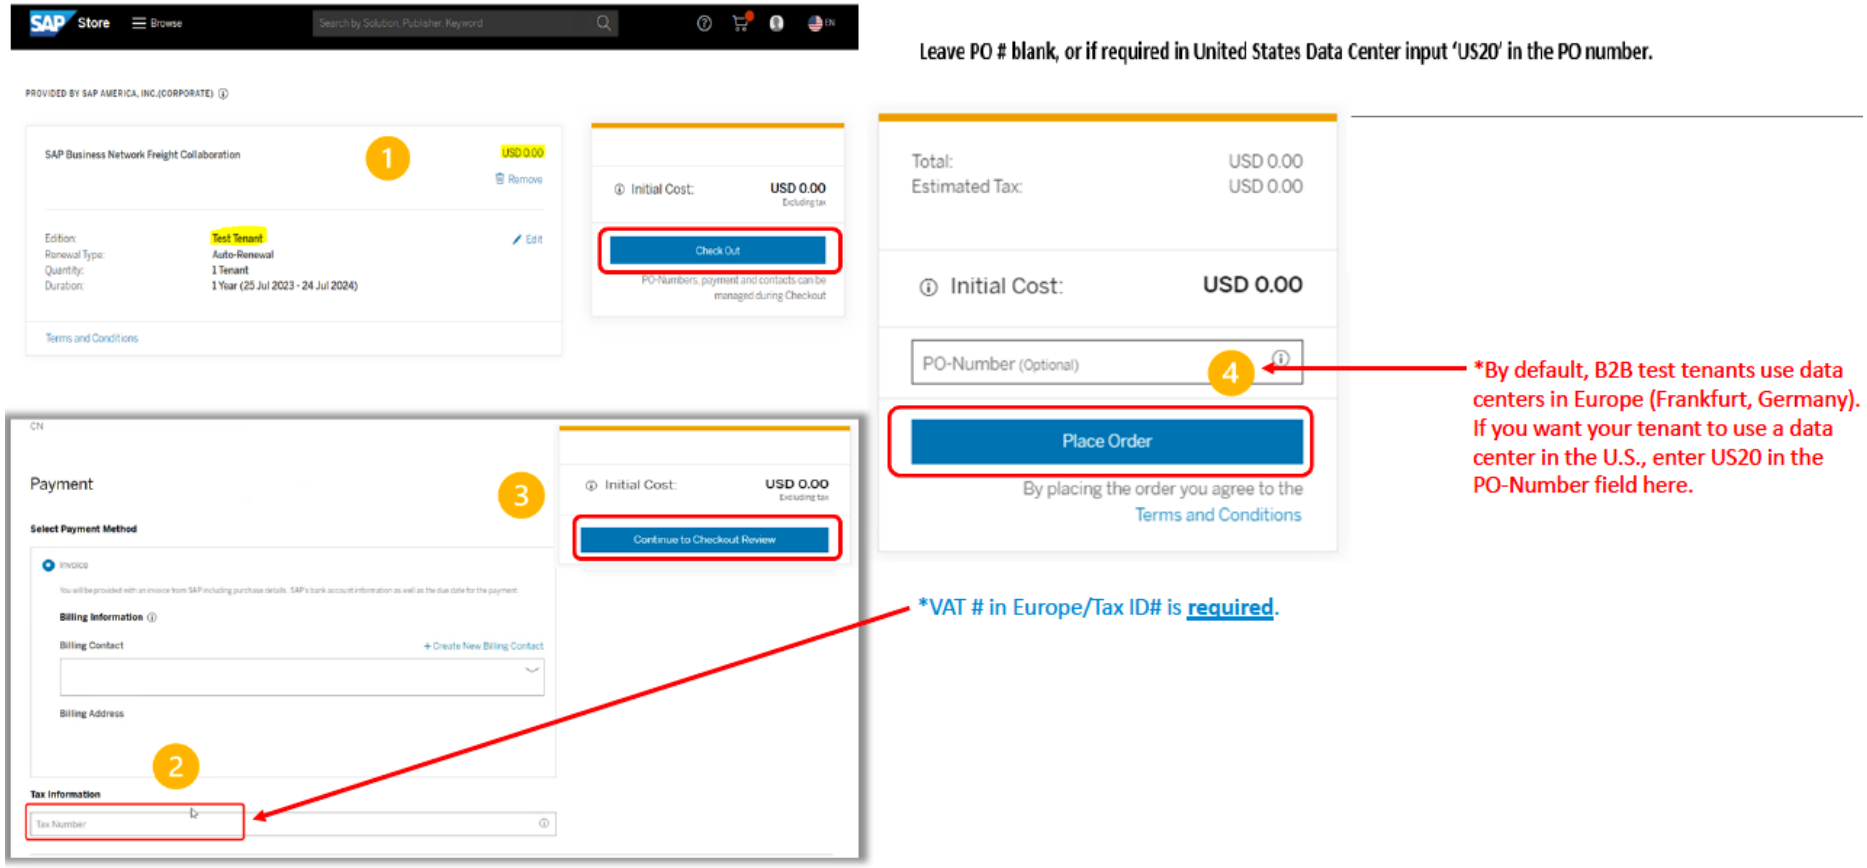

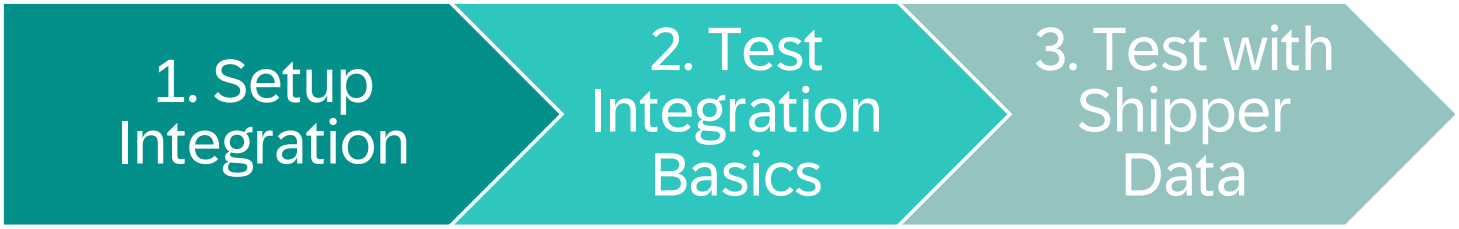

[Blog – Understanding Network Partner Integration]

Test Tenant

Carriers can order a test tenant here. By default, test tenants are in the EU DC. To get on in the US DC type “US20” in the PO-Number field during checkout.

Carrier Integration Steps to Success

1. Setup Integration

- Order Test Tenant
- Get OAuth Credentials
- Setup integration config

2. Test Integration Basics

- Use self testing options in your tenant
- Make sure you are receiving data and understand the data being sent

3. Test with Shipper Data

- Connect with Shipper in Test landscape
- Shipper sends test data
- Carrier responds with API/EDI
