System Connections > Create Services

System Connections > Create button to launch outbound service creation – AKA Webhooks

- Set the following:
  - Service Name
  - Operation Name
  - Message Format
  - Communication Detail
  - Authentication Details
  - Activate the Operation

Note: Most services need to be enabled on the shipper side

Exception: Freight Subcontracting All & Freight Tendering All

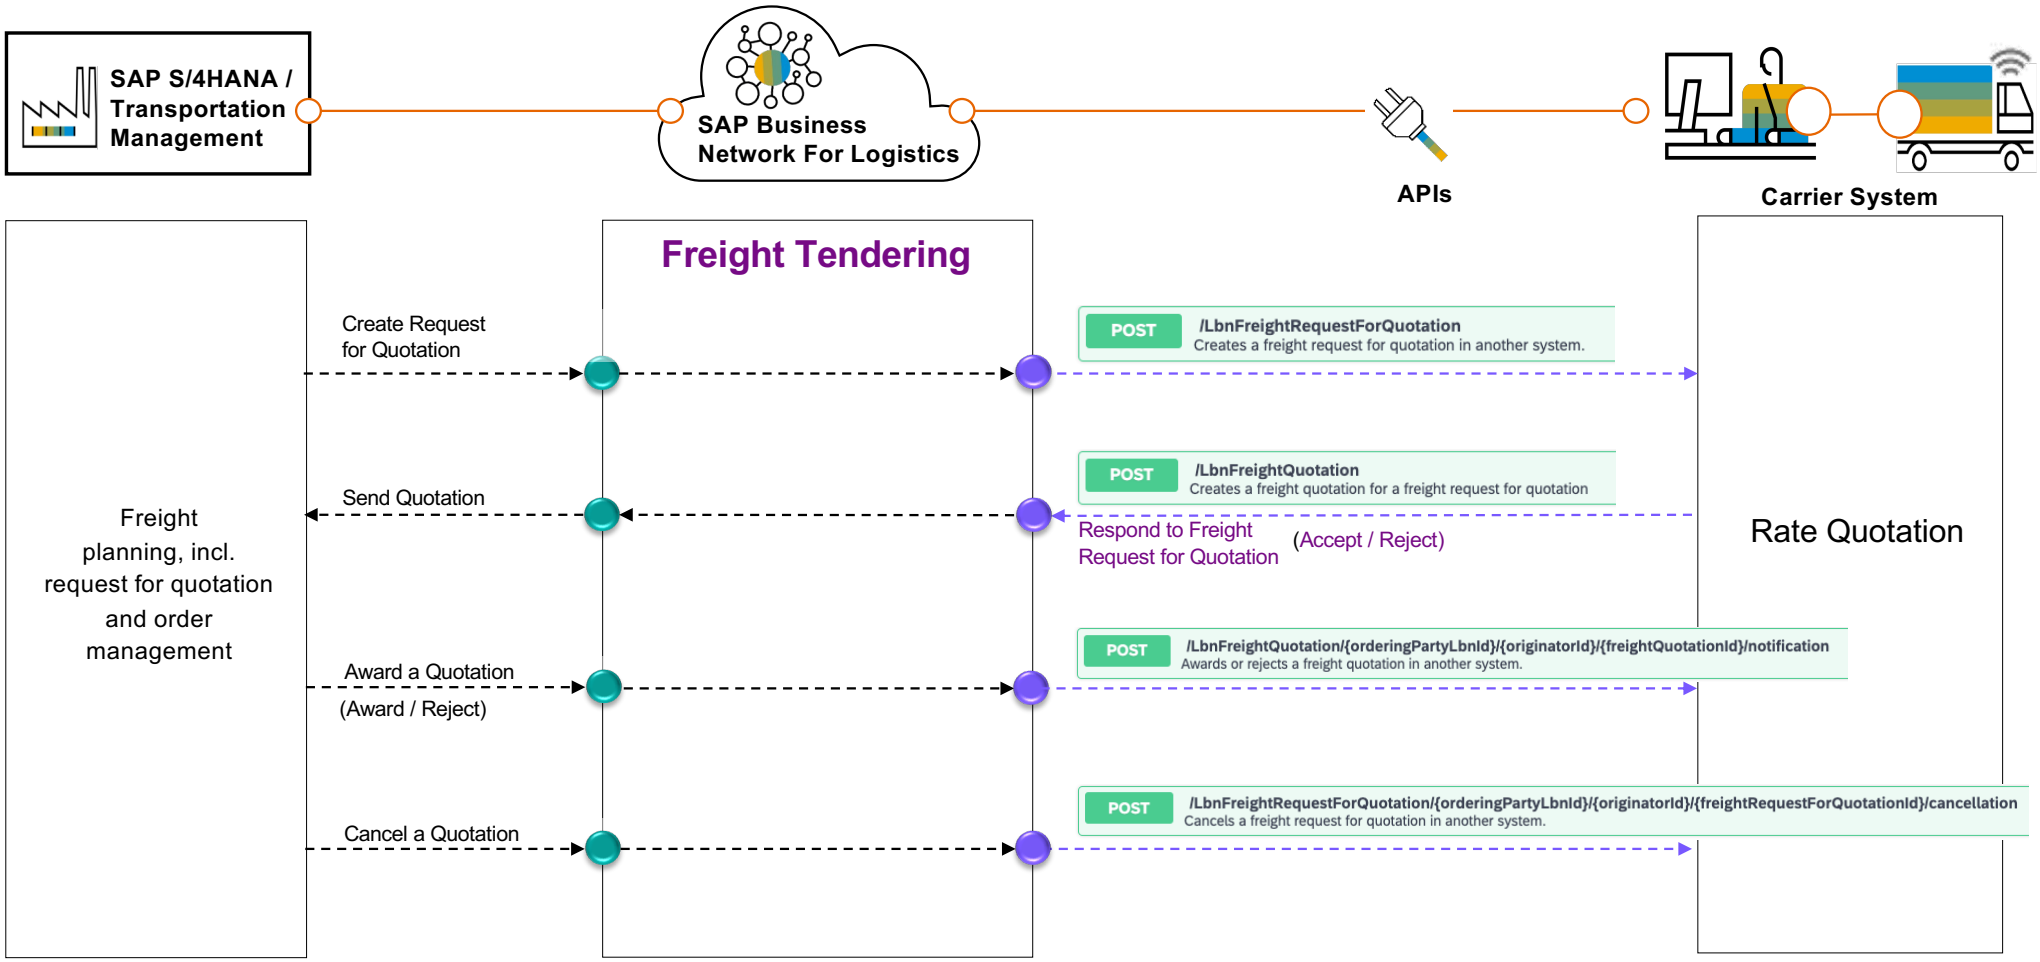

Demo & Exercise

Config Carrier API Settings

INTERNAL – SAP and Partners Only

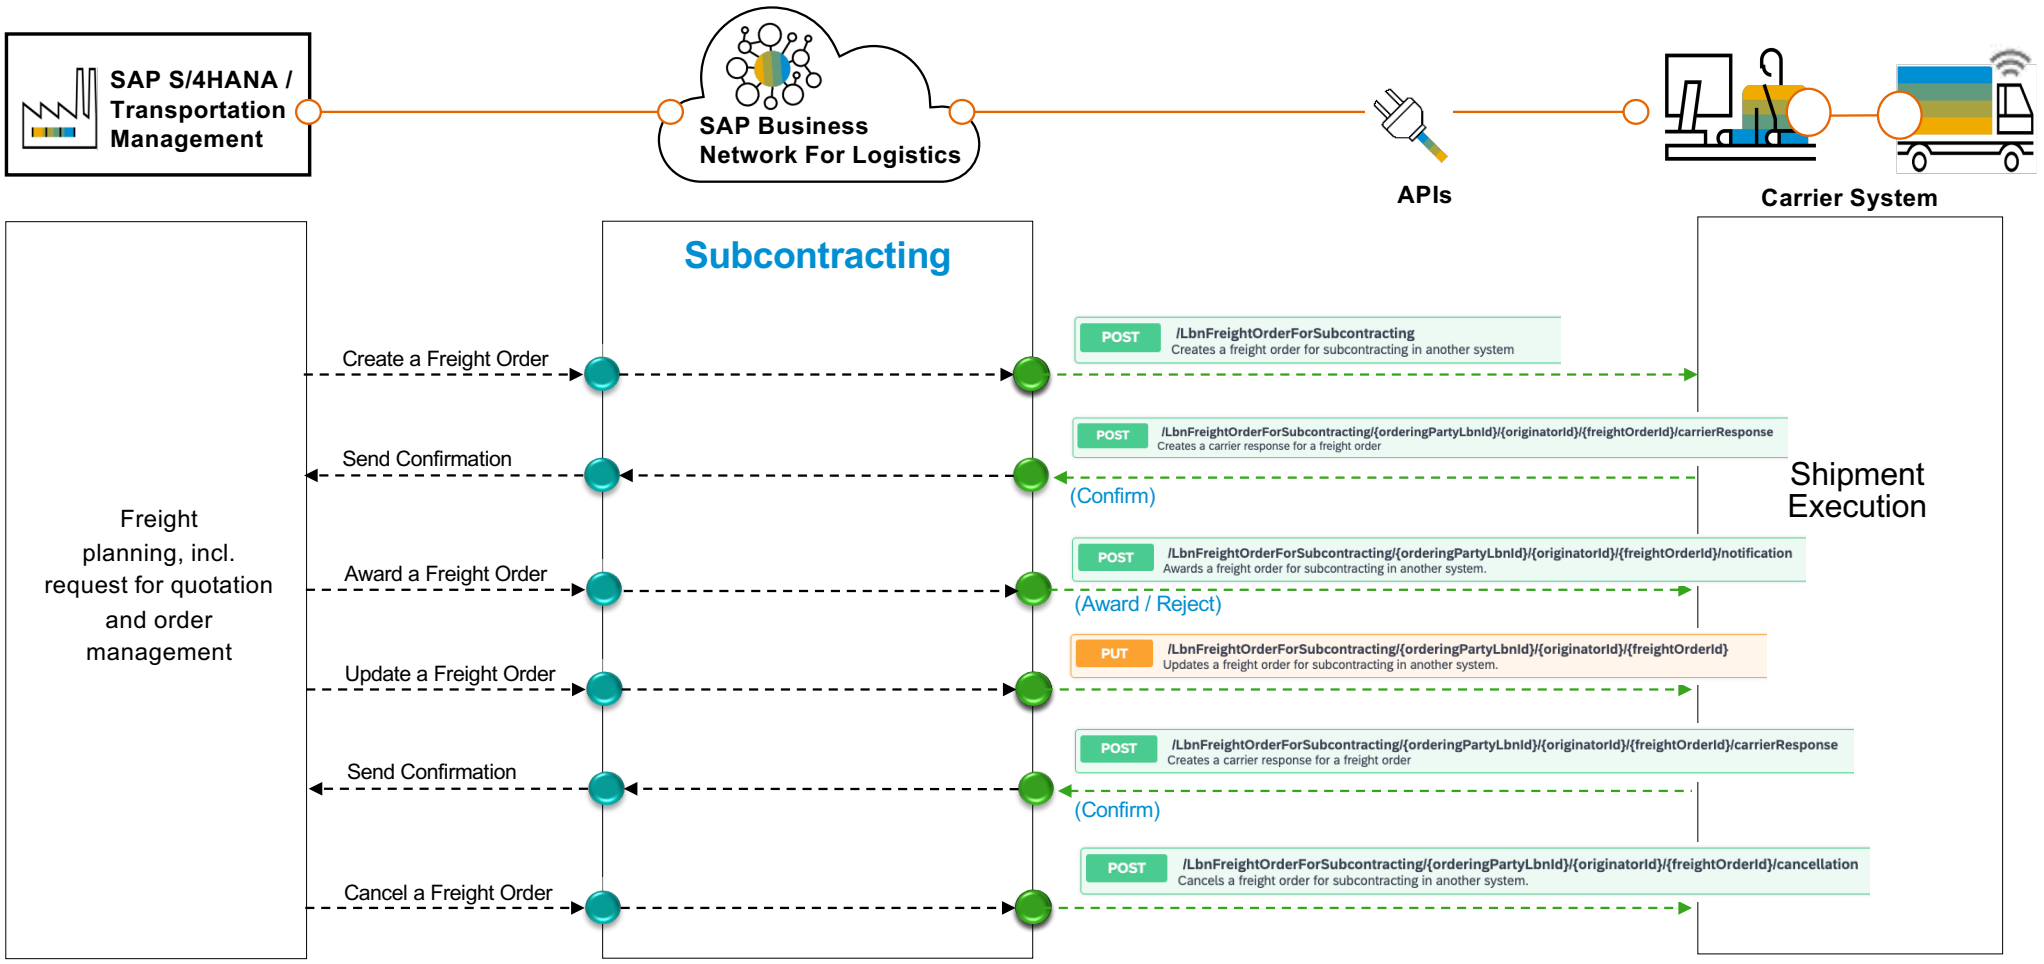

API Flow for Freight Tendering – AKA Spot Bids, AKA RFQ

Out-of-the-box integration as per SAP Notes 2620322, 2753223 and 2764922

[Link to SAP API Hub for APIs]

API Flow for Subcontracting

Out-of-the-box integration as per SAP Notes 2620322, 2753223 and 2764922

[Link to SAP API Hub for APIs]

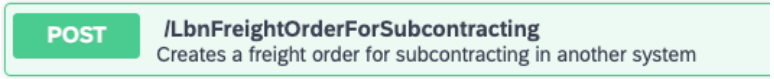

INTERNAL – SAP and Partners Only

Freight Tendering & Subcontracting Consumer APIs – Things to Know

Follows RESTful pattern

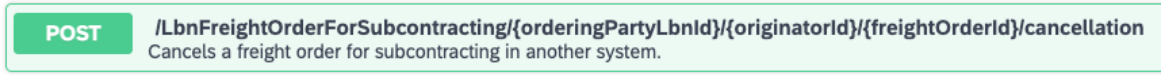

Webhooks must match the exact URL specified in API docs

For example:

- Carrier must create a services with endpoint /LbnFreightOrderForContracting

For Example:

- Carrier must create API endpoint to receive data in the URL

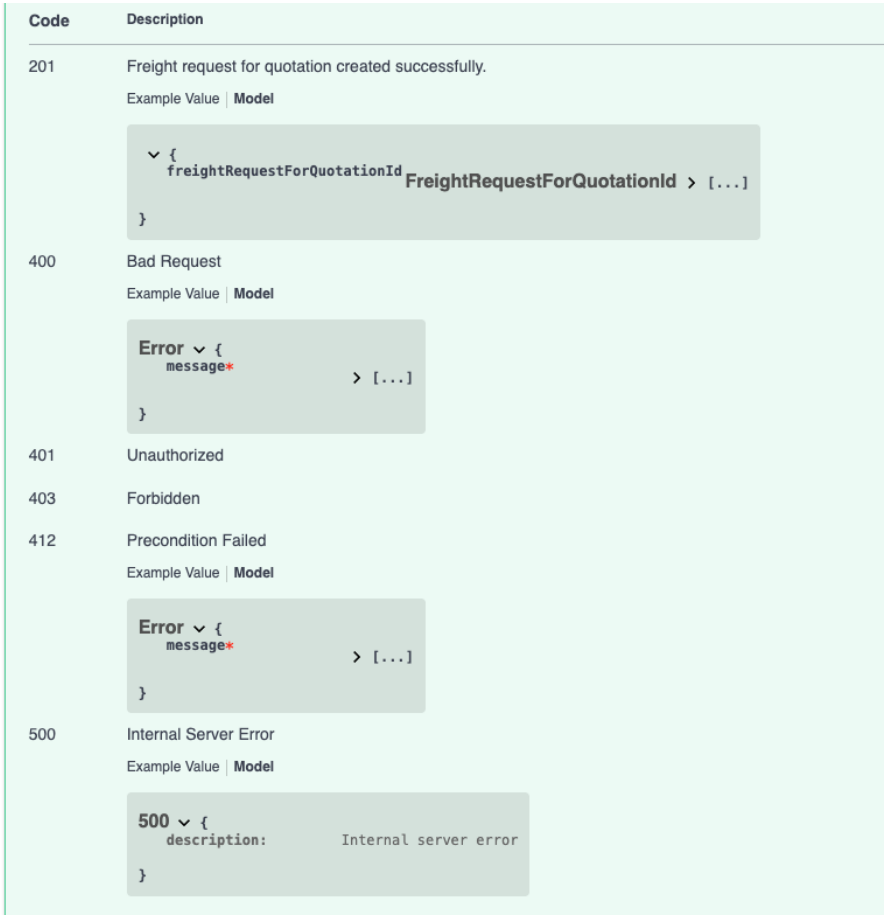

See Payload Examples

Important: *Make sure carriers understand this upfront – some don't have the technical capabilities to handle such restful services (old middleware, lack of skills, etc)*

Freight Tendering & Subcontracting Consumer APIs - Responses

Webhook API acceptable responses are also documented for both Tendering and Subcontracting

- Webhook APIs should stick to these response codes and response formats

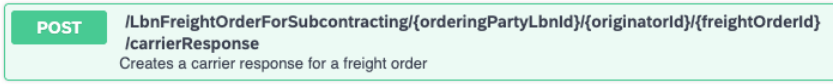

Freight Tendering & Subcontracting Provider APIs – Things to Know

Follows RESTful pattern – But Tendering different than Subcontracting

Freight Tendering API

Freight Subcontracting API:

What differences do you notice?

API Endpoint for Freight Tendering: https://<BN4L API Hostname>/http/v1/LbnFreightQuotation

API Endpoint for Freight Subcontracting: https://<BN4L API Hostname>/http/v1/LbnFreightOrderForSubcontracting/<Shipper LBNID>/<Orginator ID>/<FO#>/carrierResponse

See API Examples

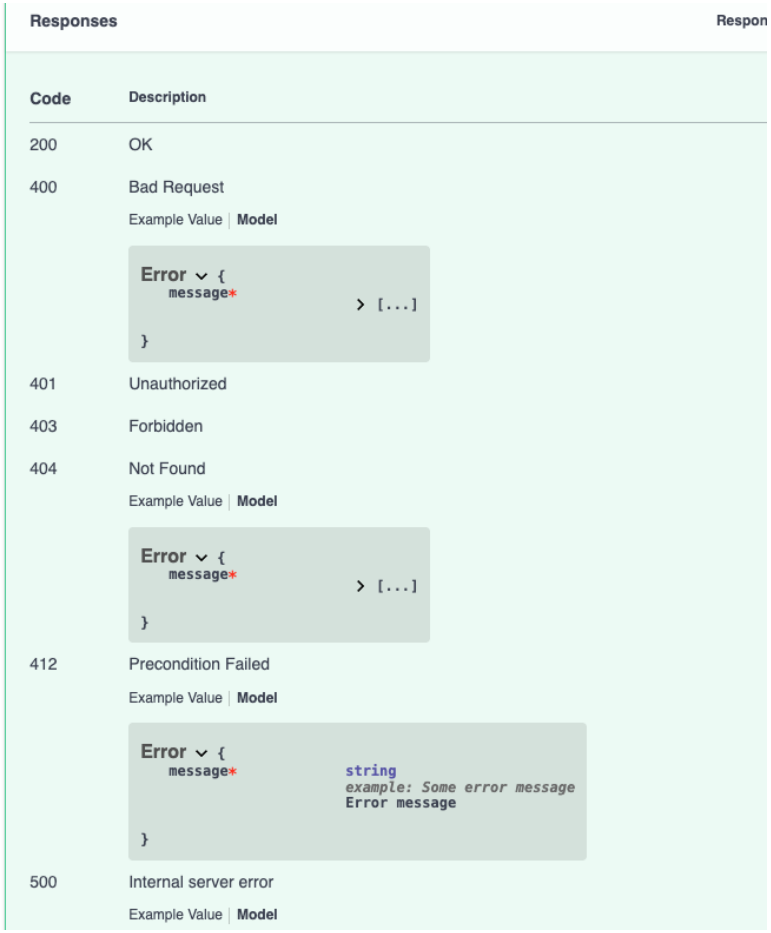

Freight Tendering & Subcontracting Provider APIs - Responses

Response Codes and Payloads documented

- Both business and technical responses are documented
- Very important for carrier API developer to take these into account

Example: had a carrier not take business exception into account and would keep trying API call over and over again. Had to block their access.

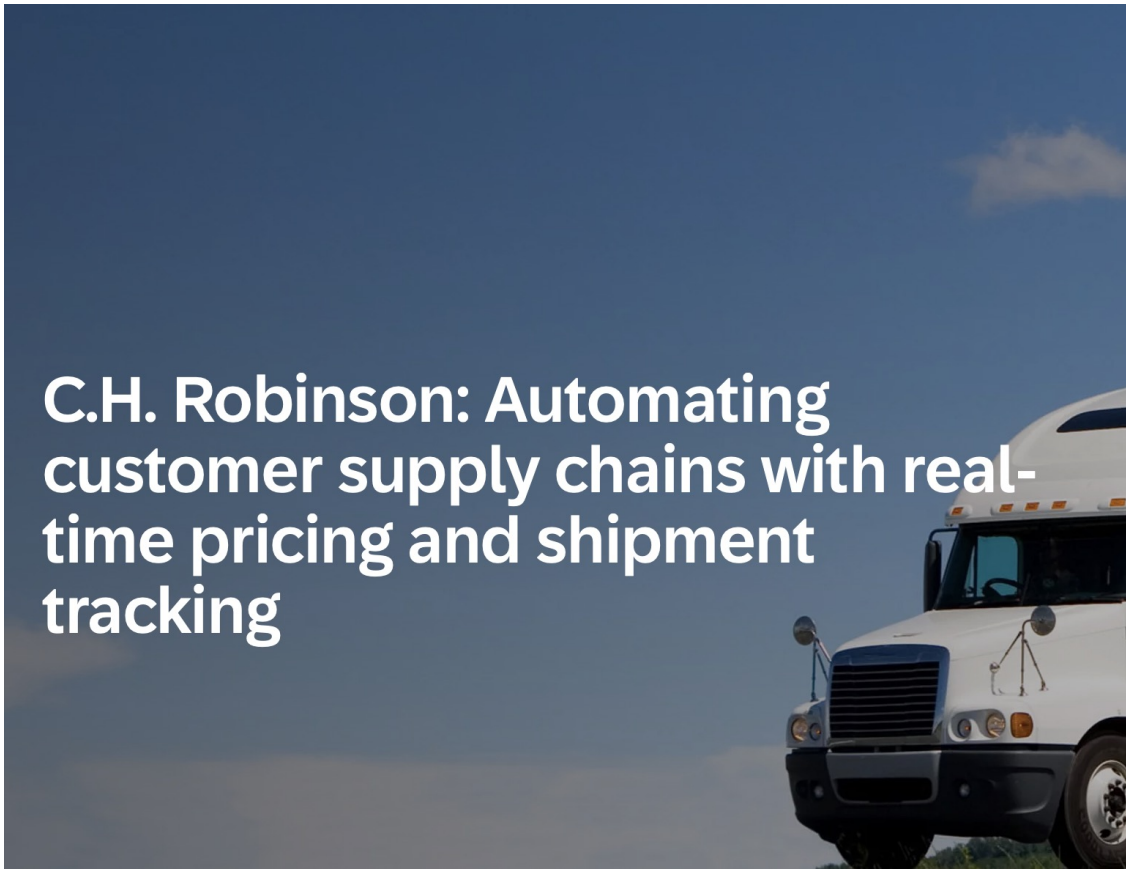

412 – Business Error (could be the order was withdrawn or timed out or awarded to another carrier)

Carrier Success Story – C.H. Robinson

First Ever Standardized API Integration for Road Shipments

- First developed for a single customer
- Extended to many other customers since
  - Single Tenant with Single API integration
  - Takes a day or two to activate and configure for new customers
- Now extending to Global Freight – Ocean/Air
- SAP / CHR Success Story
