Shippers, Carriers and other data contributors often spend a lot of time trying to understand and use the various BN4L APIs. SAP Business Accelerator Hub has all the answers! In this blog I will show some hints and tips about how to work with SAP Business Accelerator Hub.

There are many BN4L APIs. In this example I will focus on the API for Freight Order Confirmations.

Open SAP Business Accelerator Hub and search for the API at https://api.sap.com/
For example I search for:

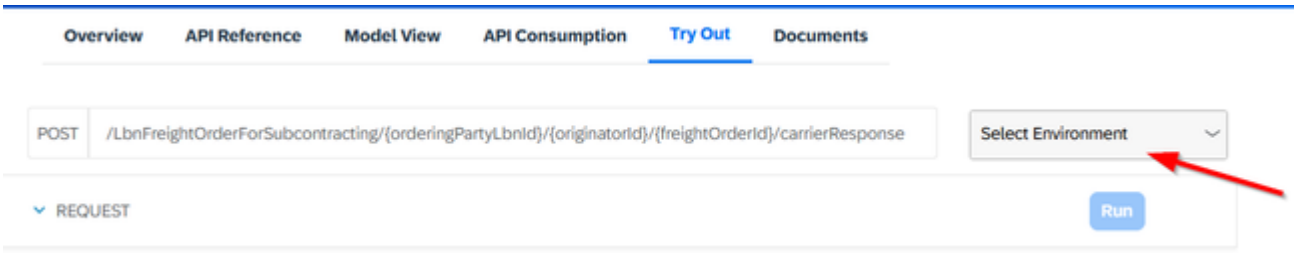

Voila!

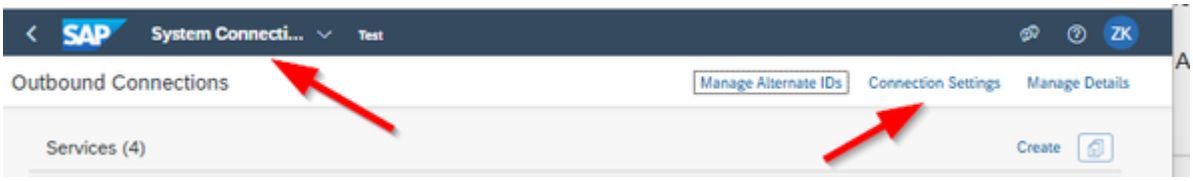

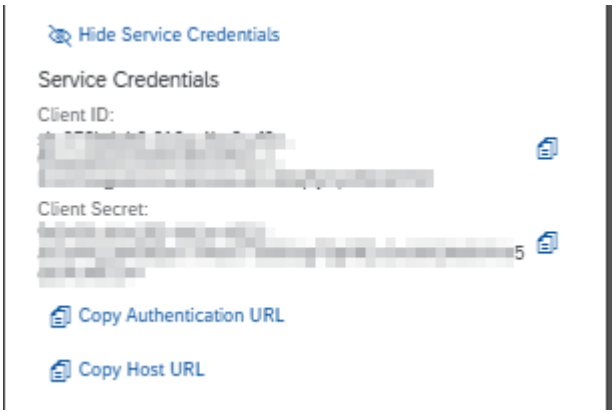

Now that I have found the API I will spend some time reading all the documentation (or skip the documentation and just dive straight into the testing, but Reading the documentation will help!!).

I've read the documentation (honest) and I'm now ready to test the API. First I need to enter some information about my BN4L test environment (i.e. my BN4L test carrier tenant).

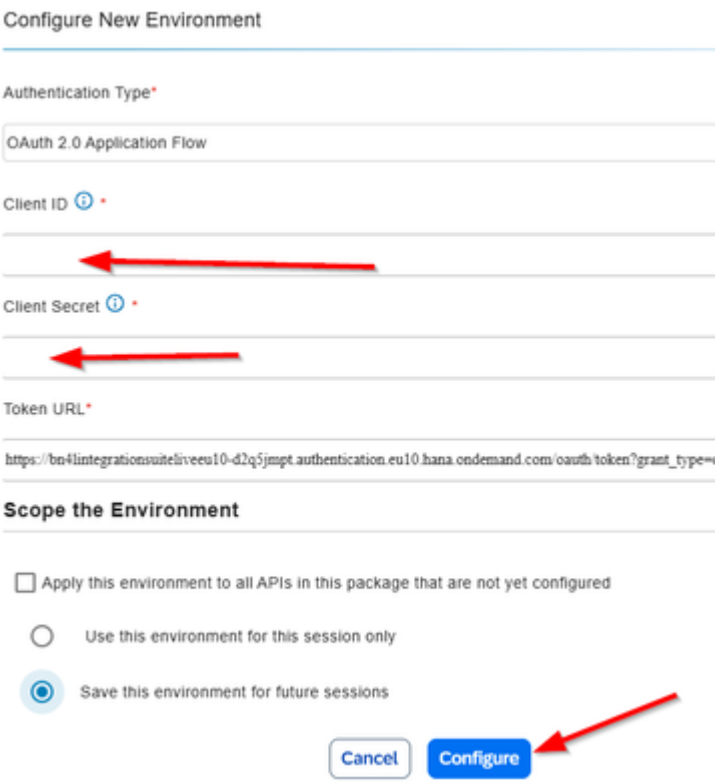

Before creating the environment, go to your BN4L test tenant and get the Service Credentials for Client ID and Client Secret. At the time of writing they can be found in the System Connections App:

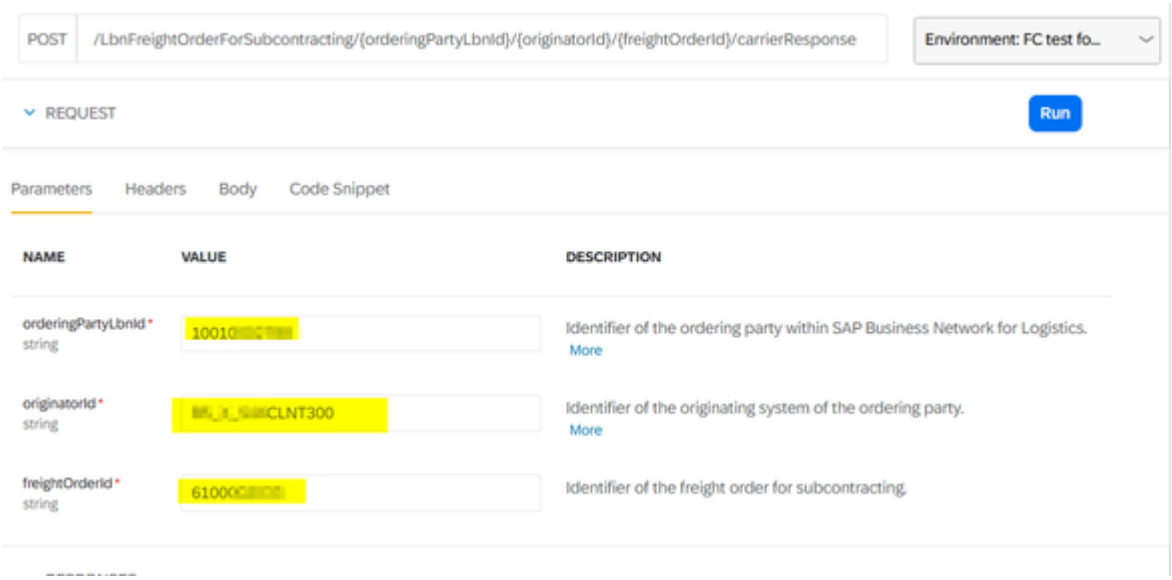

Copy/Paste to the Hub and Save:

Enter the required Parameters. You will probably already know the LBN IDs, freight Order number and S/4 system. I got these from a previous message that sent a freight order request to a carrier but you can also get them from elsewhere.

The Body will be be prefilled with all possible parameters. In my example I simply add the carrier LBN# and 'CN 'for Confirmation. Now click Run:

Hopefully you now see a 200 Success message and a Confirmation appears in your systems.
Alternatively, you might see an error message with clear instructions about the problem 😎

Conclusion and Next Steps

I hope this blog helps you on your BN4L journey!
Test the other BN4L APIs.
Use the example Code Snippets in your own systems.
