Introduction

Welcome to SAP Business Network Global Track and Trace!

What is the network and what are the benefits of joining?

SAP Business Network for Logistics improves supply chain efficiency by connecting business partners on a collaborative network that supports jointly managing transactions, exchanging documents, and sharing insights across the value chain. Then business users can capture, process and store tracking information about tracked business processes, query any tracked process, and display its retrieved data from end to end.

SAP Business Network Global Track and Trace is a cloud solution that provides your company with a range of solution owner apps which you can use for completing your daily tasks.

This getting started guide for administrators leads you through the onboarding and initial setup process so you and your colleagues can sign in and start using the apps.

If you have any issues following the steps in this guide, start by reading Frequently Asked Questions.

Welcome Emails

After purchasing a solution for SAP Business Network for Logistics in SAP Store, the contact IT person of your company will receive several emails from SAP. These emails provide instructions and links for activating accounts, setting up global accounts, and accessing onboarding instructions and documents.

The emails are sent from notification@sapnetworkmail.com and no.reply.provisioning@sap.com. Make sure your email software doesn't block these email addresses to avoid it going to your SPAM/Junk Mail box.

The table below shows the emails you should expect to receive and the actions to take after receiving them.

If you don't have access to the emails listed here, start by reading Frequently Asked Questions.

Email	Purpose	Action to Take
An email for activating your Identity Authentication account	Notifies you that an Identity Authentication tenant has been created for you on SAP BTP, and you need to activate your account. The Identity Authentication is an identity provider for user authentication and authorization management. You won't receive this email if: • Your company has already got an Identity Authentication tenant; or • You are an SAP partner that purchased the cloud test&demo license for the solution.	1. In the email, choose **Click here to activate your account** to activate your account and set password. 2. In the email, click the link text **Administration Console** to go to the administration console for SAP Identity Authentication Service. Sign in with your email and the password you just set. You're recommended to bookmark this URL so you could sign in more easily in the future. 3. If the onboarding tasks need to be performed by another person, you need to add that person as the

Email	Purpose	Action to Take
		administrator of the Identity Authentication tenant. To do that, choose **Users & Authorizations** > **Administrators** in the menu pane. Then choose **+Add** and **User** at the bottom of the pane in the middle, and grant the user the **Manage Groups** authorization.
A welcome email from SAP BTP for your global account	Notifies you that your global account on SAP BTP is ready to use.	Set up your global account as described in Set Up Your Global Account in the *Administration Guide for Solution Owners*.
Welcome to SAP Business Network for Logistics, global track and trace option	Notifies you that your SAP Business Network Global Track and Trace is ready to use. The email contains onboarding instructions and document links.	In the email, click the document links. You'll refer to these documents to perform administration tasks and use the apps. You can bookmark the document links for future use.

Getting Started

After receiving the welcome emails, you can get started with the initial administrative tasks, as described in the table below.

ℹ Note

Dependent on your purchase solution, you are entitled to set up different types of SAP Business Network Global Track and Trace tenants. For more information, see Onboarding.

Task	Procedure
Set up a test environment to test the connection and data exchange between solution owner and data contributor.	1. Set up a test solution owner tenant and a test data contributor tenant, and connect the two. For detailed procedure, refer to the following section in the *Administration Guide for Solution Owners*: - Solution Owner Onboarding 2. As a test solution owner, you can connect to SAP Business Network Global Track and Trace with your backend SAP Transportation Management (SAP TM) or TM on SAP S/4HANA. For detailed information, see How to Send Documents from SAP ERP to SAP Business Network Global Track and Trace.
Set up the production use as a solution owner. This is only applicable for customers licensed with SAP Business Network Global Track and Trace. SAP partners with the cloud test&demo license cannot set up the solution for production use.	1. Set up your company's production solution owner tenant for SAP Business Network Global Track and Trace. For detailed procedure, see Solution Owner Onboarding in the *Administration Guide for Solution Owners*.

Task	Procedure
	After the setup, you'll be able to sign in to your tenant to use the solution owner apps. 2. You can connect to SAP Business Network Global Track and Trace with your backend SAP Transportation Management (SAP TM) or TM on SAP S/4HANA. For detailed information, see How to Send Documents from SAP ERP to SAP Business Network Global Track and Trace. 3. Invite the data contributors that you already know and/or discover new data contributors and invite them to connect with you on the network. For detailed procedure, see Inviting Data Contributors to Connect with You on the Network. You can then collaborate with connected data contributors on tracking business processes.

Inviting Data Contributors to Connect with You on the Network

Context

A data contributor is an individual or organization that provides logistics information and reports milestone events to you. Data contributors can include carriers, warehouse providers, visibility providers, LSPs (Logistics Service Providers), customs brokers, or other parties involved in the movement of goods. Note that you may not have to invite all the logistics information providers to your network. For example, if you receive information from visibility providers, then you don't have to invite the corresponding carriers to connect with you on the network.

Prerequisites

- You're onboarded onto SAP Business Network for Logistics.
- To perform the tasks described in this section, you must be assigned with the following roles.

Application Identifier	Role Template	Description
`lbnplatform-bprepo-live!b18679`	`BPEditTemplate`	The assigned user can edit company profile in the **Manage Business Profile** app.
	`InviteBPProcessTemplate`	The assigned user can invite business partners in the **Invite Business Partners** app.
	`BusinessPartnerDiscoveryTemplate`	The assigned user can search for and invite business partners in the **Discover Business Partners** app.

ℹ Note

For more information on role assignment, see Solution Owner Onboarding in the *Administration Guide for Solution Owners*:

Create Your Company's Business Profile

You need to create your company's business profile. This is required as a prerequisite to inviting business partners onto your network.

1. Sign in toSAP Business Network Global Track and Trace.

   For more information, see Sign In to the Network in the *Administration Guide for Solution Owners*.

2. In the SAP Fiori Launchpad window, when a message box opens reminding you that your company's business profile is incomplete, choose **Open Manage Business Profile App** in the message box.

   You can also open the app later by clicking the **Manage Business Profile** app tile in the SAP Fiori Launchpad window.

3. In the **Manage Business Profile** app, click **Edit** in the upper right-hand corner.

4. In the **Header** and **Contact Details** sections, enter at least a company name, an address, and a business contact person. To enter address and business contact, click **Add** on the right-hand side.

5. Save your business profile by clicking **Save** in the lower right-hand corner.

Inviting Data Contributors to Connect with You

You can invite data contributors to connect with you on the network using either of the following apps:

Discover Business Partners App

Use this app to invite data contributors that have already joined the network, no matter whether you know them or not. You can search for data contributors by different criteria and can select suitable ones to send connection invitations.

To invite a data contributor with the app, proceed as follows:

1. In the SAP Fiori Launchpad window, open the **Discover Business Partners** app by clicking the app tile.
2. Discover and invite data contributors.
3. After the data contributor accepts your invitation, update data contributor's LBN ID.
4. Assign technical user roles to data contributor's technical user.

Invite Business Partners App

Use this app to send connection invitations to data contributors that you already know. It is especially useful when you want to invite a number of data contributors all at once. For example, you have just onboarded to the network and want to invite all the data contributors that already exist in your backend SAP TM system.

To invite data contributors with the app, proceed as follows:

1. In the SAP Fiori Launchpad window, open the **Invite Business Partners** app by clicking the app tile.
2. Add new data contributors to your data contributors list.
3. Submit connection invitations.
4. After the data contributor accepts your invitation, update data contributor's LBN IDs.

5. Assign technical user roles to data contributor's technical user.

Next Steps

For more information about the administrative tasks and track and trace activities, explore the user assistance by calling up the in-app help via the ⓘ *Open Help* icon on the SAP Fiori Launchpad.

The following sections in the user assistance may be of interest to you:

Role	Activity	Document
SAP Consultant	Modeling and testing the tracking scenairo	Guide for Model Administrators
	Connecting to SAP S/4HANA	How to Send Documents from SAP S/4HANA to SAP Business Network Global Track and Trace
	Sending documents to other SAP systems	How to Send Documents from SAP Business Network Global Track and Trace to Other Systems
Business User	Getting started with fulfillment tracking apps	Fulfillment Tracking Apps in the guide *Application Help*
IT Administrator	Monitoring message transactions	Guide for Message Log Administrators

Frequently Asked Questions

This section answers the questions that are frequently asked when you get started. It covers questions about onboarding, user authentication, subscription failures, signing in, inviting business partners, and getting support.

Welcome Emails

What if I didn't receive the email for activating my Identity Authentication account?

An Identity Authentication tenant is provided to customers who haven't got an existing tenant.

If you are an SAP partner with the cloud test&demo license of the product, you can use SAP ID Service (S-user or P-user) as the identity provider.

If you are a customer, your company may have already got an Identity Authentication tenant. To find your company's existing tenants and administrators, see Viewing Assigned Tenants and Administrators or create an incident with component BC-IAM-IDS. Then ask the administrator to grant you the **Manage Groups** authorization of the tenant so that you could proceed with the onboarding.

What if the activation link in the email for activating Identity Authentication account is invalid or already used?

Please follow the advice in SAP note 2637748 or create an incident with component BC-IAM-IDS.

Onboarding

If I have an existing Identity Authentication tenant that SAP offered me in the past, can I use it for SAP Business Network for Logistics?

Yes. The same tenant can be used for multiple SAP cloud solutions. If your company has already got an Identity Authentication tenant, you won't get a new one upon the purchase of SAP Business Network for Logistics.

Do I need a standalone Cloud Foundry subaccount for SAP Business Network Global Track and Trace?

Yes, we recommend that you use a standalone Cloud Foundry subaccount.

What if my subscription to the global track and trace apps fail?

If your subscription fails, please follow the instructions displayed in the error message on your screen.

What is the URL for signing in to SAP Business Network for Logistics?

After performing the onboarding process, you can find the sign-in URL as follows:

1. In the SAP BTP cockpit, go to the subaccount that you created for SAP Business Network Global Track and Trace.
2. In the left-hand pane, choose **Services** > **Instances and Subscriptions**.
3. In the **Subscriptions** table, click the *Go to Application* icon to the right of the app name **Global Track and Trace, Solution Owner**. This displays the sign-in page for the network. You're recommended to bookmark the URL so you can sign-in more easily in the future.

If you have added other users for your apps, send this URL to them so that they could sign-in with their own sign-in credentials.

If I'm not the admin user, how can I confirm the URL for my company tenant?

If you don't know your company tenant name or who is the administrator, you can follow the steps from Viewing Assigned Tenants and Administrators.

What is the sig-in user name/password I should use to sign in to SAP Business Network for Logistics?

If you are the administrator who receives the email for activating your Identity Authentication account, use that user (email) and the password you set to sign in to the network.

If during the onboarding process, you, as an administrator, have added other users in Identity Authentication, each of them will either receive the "Activate Your Account for User Profile" email or receive the user (email) and initial password from you (dependent on the option you selected when creating the new user). That is the user credential they should use to sign in to the network.

The number of apps that each user can see after the sign-in is dependent on the role collections assigned to the user. For more information, see Organize Roles Together and Assign Them to Users.

What if I forget my password for signing in to SAP Business Network for Logistics?

On the sign-in page, click **Forgot Password**. You'll receive the instruction for resetting your password.

After signing in, I saw an empty page with a message "Where to". What should I do?

The reason might be:

- When you entered your username and password on the sign-in page, the page has timed out. In that case, reopen the sign-in page and sign in again.
- You haven't subscribed **Global Track and Trace, Solution Owner**. In that case, go to your subaccount in SAP BTP and subscribe the app.

If the issue still exists, please create an incident with component SBN-LBN-GTT.

After signing on, I saw an empty page with a message "Authorization Request Error". What should I do?

You may try the following:

- If you use Identity Authentication as the IdP forSAP Business Network Global Track and Trace, make sure you have performed the steps as described in Establish Trust Between Your Subaccount and Identity Authentication Tenant.
- Make sure you have created the user in SAP ID Service or Identity Authentication and assigned the user the appropriate role collections.

If the issue still exists, please create an incident with component SBN-LBN-GTT.

Can I add business user roles into the role collection that I assign to the technical user?

Do not add any business user roles into the role collection you assign to the technical user. Although the system allows you to do it when adding the roles, you won't be able to open the business user apps on SAP Fiori Launchpad. For more, see Create a Technical User and Assign Role Collection.

Inviting Business Partners

How do I know the status of the connection invitation that I sent to a business partner?

If you use the **Invite Business Partners** app to submit an invitation, you can check its status in the **Status** column:

- After an invitation is submitted, the invitee is moved to the **In Progress** worklist. The status **Invitation email sent to business partner** means that SAP has sent an email to invite the business partner to register to the network. The status **Routed to business partner** means the invitee has registered to the network and received your invitation, but not yet accepted (or rejected) it.
- After the invitee accepts (or rejects) your invitation, the invitee is moved to the **Accepted** (or **Rejected**) worklist, and the status changes to **Accepted** (or rejected).

If you use the **Discover Business Partners** app to send the invitation, when your search for the business partner, you'll see the **Connection Status** in business partner information changes to **Connected** after the invitee accepts your invitation.

I've sent an invitation to a business partner using the Invite Business Partners app, but the business partner didn't receive it. What should I do?

You may first check the business partner's email address. If it's correct, then create an incident with component SBN-LBN-BP-OB.

I've sent an invitation to a business partner using the Invite Business Partners app, but would like to resend it because the business partner contact email is incorrect or has changed. What should I do?

If the invitation is still in progress, you may try recall it in the **In Progress** worklist and then submit a new invitation with the correct email address.

If the recall fails, please create an incident with component SBN-LBN-BP-OB.

After I invite a business partner, what should the business partner do to connect with me?

To get started with the network and connect with you, the business partner can refer to the following step-by-step guide on SAP Help portal:

- Activate Your Account

The guide is available in multiple languages. Select a language option beside the title.

Getting Support

How to create an incident (report an issue) and get support?

If you encounter technical issues or require technical support, you may create an incident (report an issue) using the Get Support app, which is part of the Services & Support dashboard in SAP for Me. Sign in with your S-User ID. For detailed process, see Get Support Application Online Help.

If you use a component to categorize your issue, use SBN-LBN-OB (for onboarding relevant issues) or SBN-LBN-GTT (for other issues with SAP Business Network Global Track and Trace).

If you don't know your S-User ID, see the next question.

To create an incident, I need to provide my S-user ID. What if I don't know my S-user ID?

If you don't have the sign-in credentials of your S-User, contact a user administrator in your organization. If you have trouble identifying who the user administrator is in your organization, please call the Customer Interaction Center (CIC).

For more information, see the SAP for Me Online Help under Access and Authorizations.

Miscellaneous

Why is it not possible to upload my company logo to my business profile?

When uploading your company logo in the **Manage Business Profile** app, verify if the logo meets size limitation: 2 MB
