To see an overview of the events you have reported for the freight order, click the freight order to display the **Reporting** section.

Next Steps

When you receive electronic copies of the proof of delivery and proof of pickup documents, you can use the app to upload and send them to the ordering party. For more information, see Sending Proof of Delivery and Proof of Pickup Documents to the Ordering Party

ℹ Note

- When the ordering party makes any changes, subcontracts, and executes the freight order in the SAP Transportation Management (SAP TM) system, the system does the following:
    - Updates the reporting app with these changes.
    - Sets the status of the reporting app to Reporting in Progress (freight order reconfirmation required).

  To report events in the reporting app, you must reconfirm this freight order in the **Freight Orders for Confirmation** app.
- When the ordering party sends the freight order for subcontracting, you can confirm the order in **Freight Orders for Confirmation** app and start reporting events in the **Freight Orders for Reporting** app. The freight order status is set to **Ready for Reporting** in the reporting app.

  Meanwhile, if the ordering party changes the order details in SAP TM and executes it, System creates the order in the ordering party's **Track Freight Movement** app. In this case, the status of freight order in the reporting app becomes **Reporting in Progress (freight order reconfirmation required)**.

  In this scenario, the ordering party must perform the subcontracting process again in the SAP TM system. Only after this is done, you can view the updated freight order in the **Freight Orders for Confirmation** app. When you reconfirm this freight order, the system updates the status Ready for Reporting in the reporting app.
- When the ordering party creates a freight order and subcontracts the order in SAP TM, the system updates this freight order in the **Freight Orders for Confirmation** app. When you confirm this order, it appears in the reporting app and also in the ordering party's **Track Freight Movement** app. After this is done, when the ordering party makes any changes to this freight order in SAP TM system and executes the freight order, the system updates the order only in the **Track Freight Movement** app and not the reporting app. However, the status of this freight order becomes **Reporting in Progress (freight order reconfirmation required)** in the reporting app. In this scenario, the ordering party must perform the subcontracting process again in the SAP TM system. Only after this is done, you can view the updated freight order in the **Freight Orders for Confirmation** app. When you reconfirm this freight order, the system updates the status **Ready for Reporting** in the reporting app.

Skipping an Event

If you don't have the information to report an event that is listed on the **Events to Report** worklist, you can skip the event and report it later. This enables you to carry on reporting the rest of the events in the freight order.

To skip an event, on the **Events to Report** worklist choose **Skip Event** from the inline menu of the freight order.

ℹ Note

- You can skip an event even after you have reported a delay.
- You cannot skip the last event of a freight order.

- The ordering party is not informed when you skip an event.

When you skip an event, the freight order is listed on the **Skipped Events** worklist. This ensures that you don't forget to report the event. When you're able to report the final time of the skipped event, click the freight order to display the **Reporting** section and enter the final time for the event.

If you'll never be able to provide the final time of the skipped event, you can mark the event as unable to report. By doing so, the freight order will no longer be listed on the **Skipped Events** worklist. And, if the skipped event is the only outstanding unreported event in the freight order, the reporting status will change to **Reporting completed**. To mark an event as unable to report, go to the **Reporting** section in the details view of the freight order and select **Unable to Report** from the inline menu of the event.

Note

The ordering party is not informed when you mark an event as unable to report.

Sending Proof of Delivery and Proof of Pickup Documents to the Ordering Party

To upload and send the ordering party proof of delivery and proof of pickup documents, go to the **Reporting** section in the details view of the freight order and upload the documents to the relevant events.

For a proof of delivery document, choose **Upload Proof of Delivery** from the dropdown menu of the relevant arrival event. Enter the final date and time, time zone, and upload relevant attachments and choose **Report**. Note that the time zone that you specify while uploading a proof of delivery, will be converted to the local time zone of the destination location while the system displays it in the shipper's **Track Freight Movement** app.

For a proof of pickup document, choose **Upload Proof of Pickup** from the dropdown menu of the relevant departure event. Enter the final date and time, time zone, and upload relevant attachments and choose **Report**. Note that the time zone that you specify while uploading a proof of pickup, will be converted to the local time zone of the source location while the system displays it in the shipper's **Track Freight Movement** app.

When you upload an electronic copy of a proof of pickup and proof of delivery, the system updates these documents in ordering party's **Track Freight Movement** app. Note that only when the ordering party updates the proof of pickup and delivery as planned events in the SAP Transportation Management system, the ordering party can view the documents in the **Track Freight Movement** app.

Manage Freight Execution

The **Manage Freight Execution** app enables you to keep your ordering parties informed about the transportation of their freight. For example, if a shipment is delayed, you can provide a new ETA (expected time of arrival) so the ordering party can replan if necessary.

Also, you can perform the following in this new app:

- **Planned milestone events**

  You can view the milestones planned by the ordering party.

- **Planned and unplanned events**

  You can report various planned and unplanned events.

- **Estimate**

  You can report an estimate for any planned event.

- **Delay**

  You can report delays at both the document-level and at an event-level.

- **Proof of pick-up and delivery**

  You can submit proof of pick-up and proof of delivery with attachments.

- **Additional events**

  You can report additional events for the supported event types at any stop.

- **Event history**

  You can view all the events reported by you and all other business partners. You can also view the event history for a specific planned event.

- **Attachments**

  You can view all the attachments specific to the freight execution in the **Attachments** tab.

This app contains the track relevant freight documents irrespective of whether the documents are relevant for confirmation or not.

In this app, you can view the events that you reported manually and the events reported by other business partners. The manually reported data and the events reported by the APIs are synchronized to the SAP Transportation Management (SAP TM) or SAP S/4 HANA system.

Note that you can report events for a freight order even when you have not reconfirmed a freight order that has been updated by the ordering party.

This app consists of a main view and a detailed view.

When you open the app, the main view is displayed. It consists of two screen areas:

- Filter bar

  Using the filter bar in the header, you can filter the freight documents by one of the following criteria to restrict the number of freight documents displayed:

  - **Freight Document**
  - **Freight Document Type**
  - **Ordering Party**
  - **Departure Location**
  - **Arrival Location**
  - **Departure State**
  - **Arrival State**
  - **Departure Date**
  - **Arrival Date**
  - **Created On**

- **Reference Documents**
- **Mode of Transport**

  Category of transportation, for example, road, ocean, air, and so on.

- **Reporting Status**

  Displays the reporting status based on the documents that are ready for reporting. For more information on current status, see Freight Execution Statuses.

- **Execution Status**

  Displays whether the freight is **Ready for Execution** or **In Transit**. For more information, see Freight Execution Statuses.

- **Current Status**

  Displays the current status of execution based on the latest planned event reported. You can view whether the execution is as planned, early, on time, or late. For more information on current status, see Freight Execution Statuses.

- **Estimated Status**

  Displays the estimated status of execution based on the latest estimate received for a planned event. You can view whether the execution is as running early, running on time, or running late. Note that this is relevant before the planned event has been reported. For more information on estimated status, see Freight Execution Statuses.

- **Arrival Country**

  The last arrival location of a freight document.

- **Container**
- **Dangerous Goods**
- **Departure Country**
- **IMO Number**

  The International Maritime Organization (IMO) number is a unique identifier assigned to propelled, seagoing vessels of 100 gross tons and above. It consists of the three letters "IMO" followed by unique seven-digit numbers.

- **License Plate Number**
- **Proof of Delivery Status**
- **Shipping Type**
- **Truck ID**
- **Vessel Name**

To adjust the filters, choose **Adapt Filters**.

- Worklists

  You can use the following worklists: **All**, **Documents for Reporting**, and **Reporting Completed**.

From the main view, you can navigate to the detailed view of a freight document.

Worklist (Manage Freight Execution)

To restrict the number of freight documents displayed, you can use the preconfigured worklists (**All**, **Documents for Reporting**, and **Reporting Completed**).

All

The **All** worklist displays all the freight documents that are in the system. You can view the following information for each freight document. Note that you can add one or more of the following fields to the worklist from the settings icon in the worklist:

- **Freight Document/ Document Type**

  Displays the ID of the freight document and the type of the freight document for which the execution has been planned.

- **Current Status**

  Displays the current status of execution based on the latest planned event reported. You can view whether the execution is as planned, early, on time, or late. For more information on current status, see Freight Execution Statuses.

- **Departure Location, Date, and Time**

  The planned stop where a freight document is expected to depart along with the date and time of departure.

- **Arrival Location, Date, and Time**

  The planned stop where a freight document is expected to arrive along with the date and time of arrival.

- **Reporting Status**

- **Last Reported Event**

  Displays the last reported planned event along with location details, date, and time.

- **Reporting Overview**

  You can view the total number of planned events. When you choose the number of events, you can view the number of reported events, events unable to be reported, skipped events, and pending events in a dialog box.

- **Ordering Party**

- **Arrival Country**

  The last arrival location of a freight document.

- **Cargo Quantity and UoM**

  Cargo quantity of a freight document and unit of measure.

- **Cargo Volume and UoM**

  Cargo volume of a freight document and unit of measure.

- **Cargo Weight and UoM**

  Cargo weight of a freight document and unit of measure.

- **Changed On**

- **Container**

- **Created By**

- **Created On**

- **Dangerous Goods**

An indicator that shows whether the cargo contains substances and objects that are a threat to humans, animals, or the environment when they are transported.

- **Departure Country**
- **Estimated Status**

  Displays the estimated status of execution based on the latest estimate received for a planned event. You can view whether the execution is as running early, running on time, or running late. Note that this is relevant before the planned event has been reported. For more information on estimated status, see Freight Execution Statuses.
- **Execution Status**

  Displays whether the freight is **Ready for Execution** or **In Transit**. For more information, see Freight Execution Statuses.
- **IMO Number**

  The International Maritime Organization (IMO) number is a unique identifier assigned to propelled, seagoing vessels of 100 gross tons and above. It consists of the three letters "IMO" followed by unique seven-digit numbers.
- **Incoterm**

  An international commercial term that defines the terms of sales and the passing of risks for import and export of merchandise. Incoterm is published by the International Chamber of Commerce (ICC) and widely used in commercial transactions.
- **Incoterm Location**

  A geographical location (harbour name, railway station name, transfer-cargo-terminal name, and so on) that is entered in conjunction with an Incoterm to uniquely identify the point from which the division of costs and transfer of risks are assumed between two commercial parties (purchaser and seller).
- **License Plate Number**
- **Mode of Transport**
- **Planned Gross Duration**

  Planned Net Duration
- **Planned Total Distance and UoM**
- **Proof of Delivery Status**
- **Reference Documents**
- **Shipping Type**
- **Stops**
- **Truck ID**
- **Vessel ID**
- **Departure State**

  The state as specified in the departure address.
- **Arrival State**

  The state as specified in the arrival address.

Documents for Reporting

The **Documents for Reporting** worklist displays all the freight documents for which the reporting is yet to be completed. This worklist displays the same fields as the **All** worklist.

Reporting Completed

The **Reporting Completed** worklist displays freight documents for which the reporting status is set as **Reporting Completed** or marked as **Unable to Report**. That is, when all the planned events have either been reported or marked as unable to report. This worklist displays the same fields as the **All** worklist.

Reporting an Event

You can select a freight document and report planned and unplanned events or mark all the pending planned events as unable to report directly from the worklist page using the **Report** button. For more information on reporting an event, see Reporting Events.

Export to Spreadsheet

You can choose the export to spreadsheet button to download the freight documents in Microsoft Excel format. This feature is available in all tabs.

Detail View (Manage Freight Execution)

The detail view of a freight document consists of a header and several sections.

Header

You can view the following important information about the freight document:

- **General Details**

  Displays the freight document ID, departure and arrival location details. You can also view the following information:

  - Ordering Party

    Displays the ordering party identifier.

  - Mode of transport

    Category of transportation, for example, road, ocean, air, and so on

  - Execution status

    Displays whether the freight is **Ready for Execution** or **In Transit**. For more information, see Freight Execution Statuses.

  - Reporting status

    Displays the reporting status based on the documents that are ready for reporting. For more information on current status, see Freight Execution Statuses.

- **Departure Location**

  In this sub-section, you can view the departure location details along with the departure date and time. When you choose the departure location, you can view the location address in a dialog box.

- **Arrival Location**

In this sub-section, you can view the arrival location details along with the arrival date and time. When you choose the arrival location, you can view the location address in a dialog box.

- **Current Status**

  Displays the current status of execution based on the latest planned event reported. You can view whether the execution is as planned, early, on time, or late. For more information on current status, see Freight Execution Statuses.

  Note that if an estimated time has been reported for the latest planned event, the estimated status appears below the current status.

- **Reporting Overview**

  You can view the total number of planned events. When you choose the number of events, you can view the number of reported events, events unable to be reported, skipped events, and pending events in a dialog box.

Information

The information tab contains the **General Data** section and the **Events Overview** section. You can view the following details in these sections:

General Data

- General data

  Displays the carrier details, bill of lading, and mode of transport.

- Terms and conditions

  Displays the incoterm location, movement type, shipping type, and traffic direction.

- Cargo information

  Displays the cargo details such as the weight, volume, quantity, container ID, and dangerous goods.

- Voyage

  Displays the voyage details such as the voyage number, vessel ID, and IMO number.

- Transportation

  Displays the transportation details such as the planned total distance, planned gross duration, planned net duration, number of visits, number of loading stops, and number of unloading stops.

Events Overview

Displays all the planned event details for each stop in a card format.

You can report a planned event for the specific event directly from the card using the **Report** button. You can perform one of the following actions:

- **Report**

  When you choose the **Report** button, you can report the final time and estimated time for that specific planned event. You can also add a reason code, description, and add an attachment. For more information on reporting an event, see Reporting Events.

- **Skip Event**

  If you do not have the information to report an event, you can choose this option and report it later.

- **Unable to Report**

  You can choose this option if you will never be able to provide the final time of the planned event.

- **View History**

  When you navigate to additional options and choose the **View History** button in the card, you can view all the events that have already been reported for that specific planned event on the right pane.

Reference Documents

In this tab you can view all the reference documents along with the date and time it was created.

Attachments

In this tab, you can view the attachments that you have uploaded while reporting a planned or an unplanned event. You can also view the attachments uploaded by the other business partners while reporting an event.

For each attachment, you can view the following details:

- File name
- Event

  Displays for which event the file has been uploaded.

- Location

  Displays the event location.

- File size
- Uploaded by and uploaded on

ℹ Note

- Attachment file type must be base 64
- You can attach documents related to the business document or business process in this section. You're recommended to avoid attaching sensitive personal data.
- You can only upload files that fulfil the following criteria:
  - Files must be of one of the formats: jpeg, gif, png, .pdf, .doc, .docx, .xls, .xlsx.
  - Image files must be less than 6MB file size.
  - Document files must be less than 5MB file size.
  - When you mention the file path, you must mention the file name along with the extension.

Contacts

In this tab, you can view the contact details of business partners and stops.

You can view the name, address, phone number, and the email address of the contact person for each of these contacts.

Tracking References

In this tab, you can view one or more of the following tracking references provided by the ordering party:

- Truck
- License plate
- Mobile number
- Container
- Vessel
- IMO number
- Flight number
- Package ID
- Voyage number
- Trailer ID

You can view the type and values for each of these tracking references.

Freight Execution Statuses

You can view the detailed information about the various statuses and the transition of the statuses that occur in the **Manage Freight Execution** app during the freight execution process.

Execution Status

Displays the execution progress of a freight document. You can view one of the following statuses:

- **Ready for Execution**

  When a freight document is set to ready for transportation execution in the ordering party's external system, the execution status is set as **Ready for Execution**. This is the initial execution status of a freight document.

- **Execution Started**

  When an event is reported at the source location, the execution status is set as **Execution Started**.

- **In Transit**

  When a departure is reported, the execution status is set as **In Transit**.

- **Arrived at Intermediate Location**

  When the vehicle arrives at an intermediate location, the execution status is set as **Arrived at Intermediate Location**.

- **Arrived at Destination**

  When the vehicle arrives at the destination location, the execution status is set as **Arrived at Arrived at Intermediate Location**.

- **Executed**

  When the last planned event has been reported, the execution status is set as **Executed**.
