To create a collective invoice, you must select two or more freight documents from the worklist page and choose **Create Collective Invoice**. For more information about collective invoice creation, see Creating a Collective Invoice.

Note that if you already have a collective invoice in draft version for the selected freight documents, you cannot create a new collective invoice.

ℹ Note

If a freight document is being invoiced item wise or stage wise, and if an invoice has been created only for some items or stages, then you can create an invoice for the remaining items or stages.

However, you can create a subsequent invoice only after the ordering party accepts or rejects the first invoice.

Exclusion of Zero Charges

When you create an invoice from a freight document that includes a planned charge with a zero amount, these zero charges are excluded by default in the invoice document. Also, in the **Manage Invoices** app, you can view a message in the **Charges** tab that indicates the same. You can review and manually include these charges if needed. Note that this exclusion applies only to planned charges and not unplanned charges.

Creating a Collective Invoice

When you select two or more freight documents and create a collective invoice, the system attempts to combine multiple freight documents that you have selected into a single invoice document. However, if certain conditions are different between the selected freight documents, the system cannot create a combined invoice. In this case, the system creates multiple invoices.

Split and Consolidation Criteria

The system uses the following split and consolidation criteria when it attempts to create a collective invoice:

- Account
- Invoicing party
- Payee
- Document currency
- Calculation level
- Payment terms
- Item currency

Note that the system makes a split with no specific document of priority.

Example

You have two freight documents for invoicing for which you want to create a collective invoice. You select the freight documents in the worklist screen and choose **Create Collective Invoice**. However, the document currency in the first freight document does not match the document currency in the second freight document. In this case, the system creates two invoices.

Creating Subsequent Invoices

A carrier can submit subsequent invoices for an individual freight document.

A carrier may want to invoice only a few charge lines for the charges he has actually incurred and then submit a second invoice for the remaining charges he has subsequently incurred. Alternatively, the carrier may want to charge all the lines in one invoice and then later add his unplanned charges in a subsequent invoice. In the freight collaboration option for SAP Business Network for Logistics, multiple invoices can be created for the same freight document.

A subsequent invoice can only be created for an individual freight document on the following conditions:

- There is no active invoice for that given freight document. If the carrier creates an invoice but does not submit it to SAP Transportation Management (SAP TM) and then tries to create a second invoice, an error message is returned informing him that an invoice already exists.
- An invoice has already been submitted to the SAP TM system. Only when the first invoice has been submitted to the SAP TM system can a second invoice be created, but the invoicing cannot be done for the lines that have already been invoiced. When the subsequent invoice is submitted from the freight collaboration option, it creates the subsequent invoice in SAP TM after the previous invoice has been transferred for Accruals.

The carrier can choose to exclude certain lines from an invoice – either because he wants to invoice it later or he has not incurred that charge – by clicking the cross icon. This will ensure that only a few charge lines are invoiced but not others. Excluded lines can be part of a subsequent invoice.

A further condition of subsequent invoicing relates to parent and child lines. If a parent line is part of one invoice, all its dependent lines are also expected to be part of the same invoice, so parent and child lines always appear as part of one invoice. They cannot be split and invoiced in different invoices.

If the carrier chooses to exclude a child line but not the parent line, a warning message is displayed informing the carrier that the excluded line has a reference in that invoice and that after the invoice has been submitted, it will no longer be possible to invoice the excluded child line.

Adding a Subsequent Charge

When you create a subsequent invoice, you can add a subsequent charge for a charge type which has already been invoiced.

Note

This feature is available only if the ordering party has enabled the necessary settings for you.

In the **Charges** tab, for each charge line, you can choose the icon to add a subsequent charge. When you choose the icon, you can enter a new subsequent charge and the old invoice amount is displayed below. The rate amount has been disabled for subsequent charges. You can add the additional amount in the Final Amount field and submit the invoice. For example, if the already invoiced amount for the charge type **Basic Freight** is EUR 100, and you enter EUR 50 as the subsequent charge, then the final invoiced amount for **Basic Freight** will be EUR 150.

Review Freight Documents

You can have a billing process in place with your ordering party where you do not submit an invoice to your ordering party for the transportation services you provide. Instead, your ordering party pays you automatically in a self-billing process, based on the information in the freight document.

You can view all the freight documents that are ready for self-billing by the ordering party using the **Review Freight Documents** app. This app displays all the freight documents that you have received from one or more ordering parties. You can view the transportation charges in the freight document based on which the ordering party creates a self-billed invoice.

The **Review Freight Documents** app consists of a main view and a detail view.

When you launch the app, the system displays the main view with the following areas:

- Filter bar

  Using the filter bar in the header, you can filter freight documents based on one or more of the following attributes:

  - Freight document
  - Departure date
  - Ordering party
  - Arrival date
  - Arrival location
  - Reference document ID
  - Reference document type
  - Changed on
  - Created on
  - Departure location
  - Dispute status
  - Gross amount
  - Gross amount currency
  - Purchasing group
  - Mode of transport

- Worklists

  You can use the following worklists: **No Disputes**, **In Dispute**, and **All**.

From the main view, you can navigate to the detail view of a freight document. The detail view has the following areas:

- Header

  You can view information such as the general details, freight document amount, and dispute status.

- Sections

  You can view further details of the freight document in the following sections:

  - **Information**
  - **Cargo**
  - **Stages**
  - **Charges**

- Business Partners
- Notes
- Attachments

Worklist (Review Freight Documents)

To restrict the number of freight documents displayed, you can use the preconfigured worklists (No Disputes, In Dispute, and All) that are based on the dispute status.

No Disputes

This worklist displays all freight documents for which there are no active disputes. The system displays the following information for each freight document:

- Freight document ID and ordering party

  Displays the freight document ID and ordering party details. Also displays a warning message if the freight document contains zero amount.
- Customer account
- Departure date and time
- Arrival date and time
- Departure location
- Arrival location
- Arrival location time zone
- Purchasing group
- Reference documents

Viewed and Not Viewed

In the No Disputes tab, you can toggle between the Not Viewed and Viewed sub-tabs to view the documents that you have not viewed and viewed respectively.

You can select one or more documents in the not viewed tab and choose Mark as Viewed. The system marks these documents as viewed and moves them to the Viewed tab.

Similarly, you can select one or more documents in the viewed tab and choose Mark as Not Viewed. The system marks these documents as not viewed and moves them to the Not Viewed tab.

Note that you can also perform these actions from the details view page of a freight document.

In Dispute

This worklist displays all freight documents for which the disputes are in progress (the dispute document will be in one the statuses – New, Submitted, For your approval). This worklist displays the same information as No Disputes worklist along with the count of number of disputes.

All

This worklist displays all the freight documents for reviewing. This worklist displays the same information as **In Dispute** worklist.

Detail View (Review Freight Documents)

The detail view consists of a header and several sections.

Header

You can view the following important information about the freight document:

- **General Details**

  Displays the freight document ID, contact details, delivery date, and purchasing group. When you choose the contact, the system displays the phone number, email, and address of the ordering party.

- **Freight Document Amount**

- **Dispute Status**

Information

The **Information** section displays the following subsections:

- **General**

  Displays the total distance, duration, service level, and freight agreement details.

- **Departure Location**

  Displays the date and time and address.

- **Arrival Location**

  Displays the date and time and address.

- **Active Vehicle Resource**

  Displays the means of transport, vehicle code, vehicle type code, and vehicle resource ID.

- **Administrative Data**

  Displays the administrative information.

- **Dispute Details Section**

  Displays the dispute ID, the amount that you proposed, the amount proposed by the ordering party, and the dispute status.

- **Reference Documents Section**

  Displays the document type and document ID of the reference documents.

Cargo

The **Cargo** section displays information on the cargo items involved, such as type, locations, quantity, gross weight, net weight, dimensions, and gross volume.

ℹ Note

- You can view the details of all cargo item types such as container, package, product, and service. You can navigate through the entire cargo item hierarchy. For example, from a container to the packages, package to the products or services and so on to view the respective details.
- The ordering party can implement a business add-in (BAdI) to display only the main cargo items.
- Any notes sent by the ordering party with text type `LBNMI` will be discarded as it is a technical text type used to display main cargo items.

Stages

You can view the transportation stages in this tab. You can view the details such as item, type, locations, quantity, gross weight, net weight, dimensions, and gross volume for each stage.

Charges

The **Charges** section displays the following information:

- Charge description

  Displays the charge type details for each stage in each freight document. Charge types are the classification of charges for which you charge the ordering party.

- Charge type (Transportation System)

  Classification of charge line that indicates the type of charges such base rate, surcharge, or discount, as specified in the ordering party's SAP Transportation Management system.

- Rate amount/unit

  Displays the flat rate amount or rate amount per unit, for example, USD 20 per 1 kg.

- Quantity

  Displays the total quantity relevant for calculating the final amount.

- Final amount

  Displays the final amount that has been derived from the rate amount, quantity, and calculation method.

When you select a charge line, you can view the following additional details specific for the selected charge:

- Transportation charges

  You can view the charge details such as line number, charge type, calculation methods, and payment terms.

  - Line number
  - Charge description

    Displays the classification of charges for which you charge the ordering party. These are the transportation mode-specific codes that are predefined by SAP Business Network for Logistics.

  - Calculation method

    Displays the logic with which the system calculates the charges.

- Payment terms

  Displays the conditions of payment you agreed with your ordering party with respect to goods supplied or services provided.

- Logistical reference

  Displays the item or stage information for a charge line (for container, package, product, or stage) from which the system obtains the logistical data.

- Calculation basis

  Displays the actual base or factor with which the system calculated the charges. You can view the calculation basis for rates belonging to a rate table.

- Exchange rates

  Displays the exchange rate information that is used as the basis for currency conversion.

- Notes

  Displays the notes specified for the charge line.

Business Partners

You can view the various business partners associated with the freight document. The system displays the role of the business partner (whether the business partner is a carrier or an ordering party). The system also displays the address of the business partner.

Notes

You can view the comments added by the ordering party.

ℹ Note

Any notes sent by the ordering party with text type `LBNMI` will be discarded as it is a technical text type used to display main cargo items.

Attachments

You can view the attachments added by the ordering party.

ℹ Note

You can only upload files that fulfil the following criteria:

- Files must be of one of the formats: jpg, gif, png, .pdf, .doc, .docx, .xls, .xlsx
- Image files must be less than 6MB file size
- Document files must be less than 5MB file size
- File name must be less than 150 characters including file extension

Creating a Dispute

You can create disputes against the freight documents for self-billing for unplanned freight costs. To create a dispute case, you can use the **Review Freight Documents** app.

You can view all the freight documents for which you have not yet created any disputes in the **No Disputes** tab. When you navigate to the detailed view of the freight document, you can review the freight document charges and other details. You can create a dispute if you have any unplanned charges or if you have incurred additional charges for an existing charge line.

When you choose **Create Dispute**, the system creates a new dispute document and you can make changes to the document. When you change a value in a charge line or add a new charge line, the system displays a dropdown menu in the **Dispute Reason** column, from which you must select a reason for the dispute. You can choose to save your changes and submit them later. When you have saved the changes and not submitted the dispute yet, you can choose to either cancel the changes or delete the entire dispute document. Once you submit the document, you cannot delete the dispute document.

Once the system creates a dispute, you can view this document in the **Manage Disputes** app.

For more information on the **Manage Disputes** app, see Manage Disputes.

Manage Invoices

You can use the **Manage Invoices** app to view all the invoices that you created for your ordering party in the freight collaboration option for SAP Business Network for Logistics.

You can select one or more freight documents and create a single invoice or a collective invoice for your ordering party for the services that you provided using the **Invoice Freight Documents** app. For more information, see Invoice Freight Documents.

During the freight settlement process, you can cancel an invoice with credit memo in the **Manage Invoices** app. You can perform this action on invoices with the following statuses:

- **Submitted**
- **In Dispute**
- **Ready for Submission**

When you cancel an invoice with credit memo, the system updates the invoice status as **Cancelled with Credit Memo** and submits a credit memo to the ordering party's external transportation system.

The **Manage Invoices** app consists of a main view and a detail view.

When you launch the app, the system displays the main view with the following areas:

- Filter bar

  Using the filter bar in the header, you can filter the invoices based on one or more of the following attributes to restrict the number of invoices displayed:

  - **Invoice**
  - **Freight Document**
  - **Customer Account**
  - **Ordering Party**
  - **Changed By**
  - **Changed On**

- Created By
- Created On
- Gross Amount
- Gross Amount Currency
- Inconsistent
- Invoice Date
- Purchasing Group
- Tax Amount
- Tax Amount Currency

- Worklists

  You can use the following worklists: All, Draft, Submitted, In Dispute, In Error, Ready for Submission, Cancelled with Credit Memo, and Rejected by Ordering Party.

From the main view, you can navigate to the detailed view of an invoice. The detailed view has the following areas:

- Header

  You can view the following information:

  - General Details

    Displays the ordering party, payment terms, and purchasing group.
  - Gross Invoice Amount
  - Status

- Sections

  You can view further details of the freight document in the following sections:

  - Invoice Details
  - Charges
  - Business Partners
  - Notes
  - Attachments

Worklist (Manage Invoices)

To restrict the number of invoices displayed, you can use the preconfigured worklists (Draft, Submitted, In Dispute, In Error, Ready for Submission, and All) that are based on the status of the invoice.

All

The All worklist displays all invoices. The system displays the following information for each invoice:

- Invoice

Displays the invoice ID.

- Freight document
- Customer account

  Displays the customer account ID.

- Created On

  Displays the date the invoice was created on.

- Ordering party

  Displays the ordering party details.

- Changed On

  Displays the date the invoice was last changed on.

- Gross amount

  Displays the total gross invoice amount of the invoice. That is, if you have a collective invoice, the gross invoice amount is the total of gross amounts from all the included freight documents. Note that the gross amount is the sum of net amount and tax amount.

- Credit Memo

  Displays the credit memo ID corresponding to the invoice.

- Status

  Displays the status of the invoice, that is whether it is a draft or if it has been submitted.

- Dispute
- Purchasing Group

Draft

The **Draft** worklist displays all invoices that are not yet submitted. This worklist displays the same information as the **All** worklist.

Note that if you make any changes to a freight document (corresponding to an invoice in draft status that has already been created) in your transportation system, the system updates the status of this invoice as **Document Updated** in the **Draft** tab. You can navigate to the freight document details and compare the invoice details with the freight document details and update the invoice accordingly. Once you update the invoice, you can mark the invoice as consistent.

Submitted

The **Submitted** worklist displays all invoices that you have already submitted to the ordering party. This worklist displays the same information as the **All** worklist.

In Dispute

The **In Dispute** worklist displays all invoices for which a dispute has been created as a result of changes having been changed without prior agreement. This worklist displays the same information as the **All** worklist.

In Error
