The system displays the list of users who have subscribed to notifications for the current scenario. The subscription is made in the **Define User Settings** app.

Scenarios

As a carrier, you can schedule email notifications for the following scenarios:

Scenario Group	Scenario	For receiving email notifications when, before or after ...
Business Operations	Integration Error, Integration Error V2	The system now sends an email notification to you when an integration error occurs.
Dock Appointment Scheduling	Cancel Appointment	A scheduled dock appointment has been canceled by the shipper. The notification includes a link that you can click to view the appointment.
	Create Appointment	A scheduled dock appointment has been created by the shipper. The notification includes a link that you can click to view the appointment.
	Reschedule Appointment	A dock appointment has been rescheduled by the shipper. The notification includes a link that you can click to view the appointment.
	Create Appointment Request	A scheduled dock appointment request has been created by the shipper. The notification includes a link that you can click to view the appointment.
	Appointment Booking Cut-off	The cut-off time for a dock appointment is reached. After the cut-off time, the carrier cannot modify the appointment.
Freight Order Management	Create Freight Order for Confirmation	A new freight order has been created in the network. The notification includes a link that you can click to view the freight order and respond to it.
	Cancel Freight Order for Confirmation	A freight order has been canceled by the shipper. The notification includes a link that you can click to view the freight order.
	Update Freight Order for Confirmation	A freight order has been modified by the shipper. The notification includes a link that you can click to view the freight order and respond to it.
	Reject Quotation	Your quotation to an RFQ has been rejected by the shipper. The notification includes a link that you can click to view the quotation.
	Create RFQ	A new request for quotation (RFQ) has been sent by a shipper. The notification includes a link that you can click to view the RFQ and submit quotation.

Scenario Group	Scenario	For receiving email notifications when, before or after ...
	Cancel RFQ	A shipper has canceled an RFQ that was previously sent. The notification includes a link that you can click to view the RFQ.
	Award Quotation	Your quotation to an RFQ has been accepted by the shipper. The notification includes a link that you can click to view the quotation.
Freight Settlement	Invoice Submission After Dispute Resolution	A carrier invoice is ready for submission after disputes are resolved. The carrier can then review the invoice, adjust the tax lines (if needed) based on the resolved amount, and submit the invoice.
	Update Carrier Dispute	The system sends an email notification to you when the shipper sends a dispute document for your approval. The notification email includes a link to the dispute document.
	Resolve Carrier Dispute	The system sends an email notification to you when the shipper resolves a dispute document. The notification email includes a link to the dispute document.
	Pending Invoice Submitted	The system sends an email notification to you when the pending invoice document has been submitted after receiving the corresponding freight document from your shipper.
	Invoice with API Error	The system sends an email notification to you when the invoice document fails during processing in SAP Business Network for Logistics with an error.
	Invoice Submission Pending	The system sends an email notification to you when the invoice document is not yet submitted to your shipper as the corresponding freight document is not available in SAP Business Network for Logistics.
Manage Network	Invitations	An invitation has been sent to you from a shipper. The notification includes a link that you can click to view the invitation and respond to it.
	Invitation Auto-Accepted	An invitation sent to you from a shipper has been automatically accepted. Invitations are automatically accepted when your setting for **Automatically accept connection requests (invitations) from shippers** is **Yes** in the **Manage Business Profile** app.

Scenario Group	Scenario	For receiving email notifications when, before or after ...
Freight Booking Management	Create Freight Booking	The system sends an email notification to you when a shipper sends a new freight booking.
	Update Freight Booking	The system sends an email notification to you when a shipper sends an updated freight booking.
	Cancel Freight Booking	The system sends an email notification to you when a shipper sends a cancellation of a freight booking.

Note

To enable email notifications for the above scenarios, you need to activate the settings in this app and subscribe to notifications for the scenarios in the **Define User Settings** app.

Related Information

Define User Settings (Carrier)

Configure Notification Settings (Carrier)

Prerequisites

To enable reminder notifications, make sure you also maintain an email address and subscribe to the notification(s) you need in the **Define User Settings** app. For more information, see Define User Settings (Carrier)

Context

You can configure the following types of notifications in the **Manage Notification Settings** app, where applicable.

On-Event Notification

On-event notification refers to the email notification that you receive at the time when a target event happens, for example, when you receive an invitation from a shipper. You can activate or deactivate on-event notification by setting the activation toggle to **Yes** or **No**, respectively.

Pre-Event Notifications

Pre-event notifications refer to the notifications you receive before the target event happens, for example, before dock appointment booking cut-off. You can schedule pre-event notifications by adding notification periods and specifying notification frequency within each period, as described below:

- Notification period: The period within which email notifications will be sent in a specified frequency.

  You only specify the start of the period, for example, **30 days before the event**, which means the notification period starts from 30 days before the event till the start of the next period or the event time.

- Frequency: The frequency to receive notifications within the specified period. For example, setting the frequency to **every 5 days** means within the specified period, you'll receive an email notification every 5 days.

Example

The schedule shown below

Notification Period	Frequency	Activated for User
60 days	Every 10 days	Yes
30 days	Every 5 days	Yes
15 days	Every 3 days	Yes

specifies the following schedule:

- Within the period from 60 days before the event to 30 days before the event, receive a notification every 10 days.
- Within the period from 30 days before the event to 15 days before the event, receive a notification every 5 days.
- Within the period from 15 days before the event till the event time, receive a notification every 3 days.

In the same example, if you deactivate the "30 days" period, as shown below:

Notification Period	Frequency	Activated for User
60 days	Every 10 days	Yes
30 days	Every 5 days	**No**
15 days	Every 3 days	Yes

Then the "30 days" period is ignored and the schedule changes to:

- Within the period from 60 days before the event to 15 days before the event, receive a notification every 10 days.
- Within the period from 15 days before the event till the event time, receive a notification every 3 days.

Post-Event Notifications

Post-event notifications refer to the notifications you receive after the target event happens, for example, after you have received the invitation. You can schedule post-event notifications by adding notification periods and specifying notification frequency within each period, as described below:

- Notification period: The period within which email notifications will be sent in a specified frequency.

  You only specify the end of the period, for example, **30 days after the event**, which means the notification period starts from the end of the previous period or the event time, to 30 days after the event.

- Frequency: The frequency to receive notifications within the specified period. For example, setting the frequency to **every 5 days** means within the specified period, you'll receive an email notification every 5 days.

Example

The schedule shown below

Notification Period	Frequency	Activated for User
15 days	Every 3 days	Yes
30 days	Every 5 days	Yes
60 days	Every 10 days	Yes

specifies the following schedule:

- Within the period from the event time to 15 days after the event, receive a notification every 3 days.
- Within the period from 15 days after the event to 30 days after the event, receive a notification every 5 days.
- Within the period from 30 days after the event to 60 days after the event, receive a notification every 10 days.

Note that for the invitations scenario, the notifications stop as soon as the invitation is accepted or rejected.

In the same example, if you deactivate the "30 days" period, as shown below:

Notification Period	Frequency	Activated for User
15 days	Every 3 days	Yes
30 days	Every 5 days	**No**
60 days	Every 10 days	Yes

Then the "30 days" period is ignored and the schedule changes to:

- Within the period from the event time to 15 days after the event, receive a notification every 3 days.
- Within the period from 15 days after the event to 60 days after the event, receive a notification every 10 days.

Procedure

1. Launch the **Manage Notification Settings** app.
2. In the scenario list, select the scenario for which you want to set notifications.
3. To activate on-event notification, for **On-Event Notification**, set the toggle to **Yes**. To deactivate, set it to **No**.
4. To configure pre-event or post-event notifications, do the following:
    a. Expand the **Pre-Event Notifications** or **Post-Event Notifications** area.
    b. To add a notification period, choose the **Add** button. Then in the **Add Notification Period** dialog box, specify the start (pre-event) or end (post-event) of the period and the frequency, and choose **Save**. You can add multiple periods according to your needs.
    c. To edit or delete a notification period, choose the **Edit** or **Delete** button. To deactivate a period, set **Activated for User** to **No**.

User Management

ℹ Note

This app is only available for carriers in the productive environment. It is not applicable for a test-type carrier that subscribed **Carrier Apps for Freight Collaboration** (plan: test or si).

Prerequisite

To access the **User Management** app, you must be an administrator user of SAP Business Network for Logistics.

If you don't know who is your company's administrator user, create an incident with component SBN-LBN-BP-OB and provide your company's subdomain in the incident. The subdomain can be found in your sign-in URL as follows: https://<subdomain>.lbn.cfapps.eu10.hana.ondemand.com/sites

About the app

The **User Management** app allows an administrator to perform user management tasks including the following:

- Add or delete users in your company's tenant
- Add users to user groups
- Manage additional user groups to control user access to specified docking locations in the **Self-Book Dock Appointments** app.

The **User Management** app consists of the following areas:

- Filter bar

  You can filter the users based on one or more of the filter options, such as **First Name**, **Last Name** and **Email** that appear in the header area.

- Worklists

  Include an **All Users** list and other user lists categorized by user groups.

Worklist (User Management)

There are different ways to work on the users and to set filters. To restrict the number of users displayed, you can use the filter bar in the header and the worklists for different user groups.

Filter Bar

With the filter bar, you can do the following:

- Specify filters to narrow down the worklists and search for users.
- Add or remove the filters displayed on the filter bar by choosing **Adapt Filters**.
- Save the current filter settings as a view and apply it later.

  After you specified filters (and pressed Enter) and/or adapted filter display, the current view name shown in the upper-left corner displays a * sign, indicating the view has been changed. Save the view by either of the following:

  - Click the view name to open the **My Views** box and choose **Save** or **Save As**.
  - In the **Adapt Filters** dialog box, choose **Save**.

  Next time when you want to apply the view, just select the view name in the **My Views** box.

> **Note**
>
> The default **Standard** view cannot be changed.

Worklists

All Users

The **All Users** worklist contains all the users in the current tenant.

This worklist displays the following details for each user:

- First name
- Last name
- Email
- User group(s)

  The system displays all the user groups to which the user belongs.

This worklist contains the option to change user information, including first and last names, and the assigned user groups. You can do so by clicking the *Edit* icon in the worklist. You can also add a user by choosing the **Add** button and delete a user by selecting the user and choosing **Delete** > **Delete User**.

User Lists by User Groups

Each worklist displays all the users that belong to a specific user group. These worklists display the same user information as the **All Users** worklist.

The worklists contain the option to change user information, delete a user, and remove a user from the current user group. To edit a user, click the *Edit* icon for the user. To delete a user, select the user in the worklist and choose **Delete** > **Delete User**. To remove a user from the current user group, select the user in the worklist and choose **Delete** > **Delete Mapping**. For example, by choosing **Delete Mapping** in the **ABC** worklist, you remove the user from the **ABC** user group.

Create a User and Assign User Groups

Prerequisites

You are a tenant administrator, that is, you have already been assigned to the admin user group either by the system or by another administrator in your company.

Context

As an administrator, you can create users in your company's tenant and assign users to user groups so that they have access to relevant apps.

Procedure

1. Launch the **User Management** app.
2. In the **All Users** worklist, choose the **Add** button.

A new empty row is added at the top of the list table.

3. In the new row, enter the user names, user email, and select the user group(s) you want to assign to the user.
    - Users assigned to the "...Admin" user group are administrators. They can perform administrative tasks using the following apps:
        - Manage Business Profile
        - Retention Management
        - Blocking Store
        - Define User Settings
        - Manage Notification Settings
        - System Connections
        - Manage Invitations
        - User Management
        - Manage Integration Logs
    - Users assigned to the "...All_Function" user group can access the following apps:
        - Retention Management
        - Blocking Store
        - Define User Settings
        - Manage Notification Settings
        - Manage Invitations
        - Manage Disputes
        - Freight Orders for Confirmation
        - Freight Orders for Reporting
        - Review Freight Documents
        - Invoice Freight Documents
        - Freight Quotations
        - Freight Requests for Quotation
        - Manage Invoices
        - Self-Book Dock Appointments
        - Manage Freight Execution

ℹ Note

When assigning user groups, consider the following security considerations:

- Grant the user only the authorization that is necessary.
- Ensure that authorization is removed as soon as it is no longer needed (for example, if an employee leaves the company).

4. Choose the Save button.

> **Note**
> If the new user's email domain is different from yours, you'll be prompted to confirm it.

Results

The new user is created and added to the specified user groups in your company's tenant. The system will send an activation email to the user for setting the password.

> **Note**
> If the user already exists in SAP Business Network for Logistics, no activation email will be sent because the user was already activated for the network.
>
> Users must sign out and sign in again to see the apps respective to their newly assigned user groups.

You need to send the network URL to the newly added users so they can sign in to the network with their own user credentials (after they've activated their user accounts).

Edit User Information

You, as a tenant administrator, can change the information for existing users in your company's tenant.

Context

The following user information can be changed:

- First and last names
- User group assignments

Procedure

1. Launch the User Management app.

   You can view all your users in the current tenant in the All Users worklist. To narrow down the list, use the filter bar, search box, or go to the worklist for a specific user group.

2. To edit a user, in any worklist, click the *Edit* icon for the user, make your changes, and choose Save.

Results

If the user group assignment for an existing user is changed, the system will send an email to the user to notify the change.

Users must sign out and sign in again to see the apps respective to their newly assigned user groups.

Delete a User

Context

You, as a tenant administrator, can delete a user from the current tenant. The deleted user can no longer access the apps in your company's tenant.

ℹ Note

You can't delete your own account, or unassign the "...Admin" user group for your own account.

Procedure

1. Launch the **User Management** app.

   You can view all the users in the **All Users** worklist. To narrow down the list, use the filter bar or search box.

2. To delete a user, in any worklist, select the user and choose **Delete** > **Delete User**.

3. In the confirmation dialog box, click **OK**.

   ### ℹ Note

   If the user also exists in other tenants of SAP Business Network for Logistics, the deletion only removes the user from the current tenant.

Manage Additional User Groups

An additional user group is used to specify the docking locations that users in this group can access in the **Self-Book Dock Appointments** app.

To manage additional user groups, complete the steps below.

Creating a Group

1. Open the **User Management** app.

2. Click the *Manage Additional User Groups* icon in the upper-right corner.

3. On the **Additional User Groups** page, click **Create**.

4. In the **Create Additional User Group** dialog box, specify the following and choose **Create**.

   a. **Name** (prefixed with your subdomain name): Specify a name within 20 digits. Your name can contain letters, numbers and underscores but cannot contain reserved strings "admin", "allfunction" or "all_function".

   b. **Accessible Docking Locations**: Specify the IDs of the docking locations that you allow users to access in the **Self-Book Dock Appointments** app. Contact your shipper to get the location IDs.

Adding Users to Groups

To add users to your additional user groups, in the **All Users** worklist, click the *Edit* icon next to the target user, and select the user group(s) you want to assign. When you finish, click **Save**.

ℹ Note

Users must sign out and sign in again to see the apps respective to their newly assigned user groups.

Editing a Group
